

2014 Regional Snapshot

Are activities being undertaken to conserve our threatened ecological communities?

The survival and health of South Australia's native plants, animals and ecosystems are crucial to our social and economic well being. This is particularly the case for our ecological communities, which are groups of plants and animals that interact in unique habitats.

Unfortunately, there are 4 ecological communities in Northern and Yorke NRM region that are nationally threatened with extinction due to the legacy of past actions combined with new and ongoing threats. Two of these communities have been nationally listed as threatened with extinction [in recent years](#).

Acting to conserve threatened ecological communities helps to preserve the ecosystems we all rely on. Threatened ecological communities require targeted conservation activities such as habitat restoration and protection, and the control of threats such as weeds, pests, inappropriate fire regimes and grazing practices. Improvements to land and water-use practices are also required. Monitoring programs are used to ensure our conservation activities are effective.

State target:

Improve the management of species and ecological communities

Trend

Unknown

This is the first time this information has been collated. A trend will be available in future versions of this report.

Natural resource managers prioritise conservation activities for threatened ecological communities based on many factors, including the risk of extinction, the feasibility of preventing extinction and funding availability. To get the best outcomes from our conservation activities, natural resource managers control threats and make improvements that will benefit multiple plants and animals in these unique habitats.

Improving the prospects of our threatened ecological communities is difficult. It will take substantial effort and conservation investments over many years to prevent extinction.

Where we are at (2013)

Good

Conservation activities and monitoring occur in most threatened communities

Natural resource managers undertake conservation activities in all 4 threatened communities in the Northern and Yorke NRM region (see graph on right).

The condition of 3 of the 4 communities is monitored (see graph on right).

Changes in the [extent](#) have not been recorded for any of the ecological communities since they were categorised as threatened.

Conservation (C) and monitoring (M) activities in threatened ecological communities - Northern and Yorke NRM region

Green Activities undertaken
Red No activities undertaken

Threatened ecological community

Percentage of remaining SA extent that occurs in the NRM region

Threatened ecological community	C	M	Percentage of remaining SA extent that occurs in the NRM region
Peppermint box grassy woodlands	Green	Green	80
Iron-grass temperate grasslands	Green	Green	65
Subtropical and temperate coastal saltmarsh	Green	Red	45
Grey box grassy woodlands	Green	Green	35

Reliability of information

Excellent
