

2014 Regional Snapshot

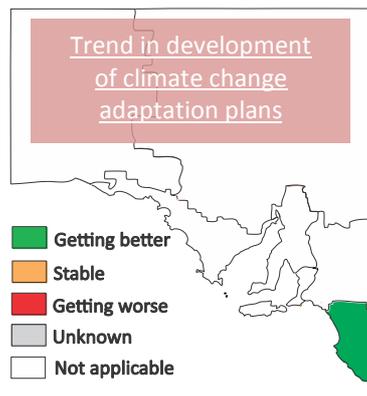

Has the climate change adaptation plan been completed?

Scientists project that climate change will cause more heatwaves and droughts, more intense bush fires, floods and storms, and a rise in sea levels.

These changes will affect infrastructure, industries and natural resources that are key to the South East NRM region's economy, as well as community health and wellbeing.

Careful planning to minimise negative impacts and identify emerging opportunities will improve the resilience of the environment and economy. Many industry groups and land managers, such as our wine industry, are already taking steps to improve energy efficiency and use recycled water to help adapt.

The [Climate Change Adaptation Framework](#) was established by the Government of South Australia in 2012 to provide guidance on the development of adaptation plans. The framework emphasises the importance of leadership and strategic direction, evidence-based policies, sustainable landscapes and healthy, prosperous communities.

State target
Improve capacity of individuals and community to respond to climate change

Trend (2012-14) Getting better There has been progress made in the Climate Change Adaptation Plan

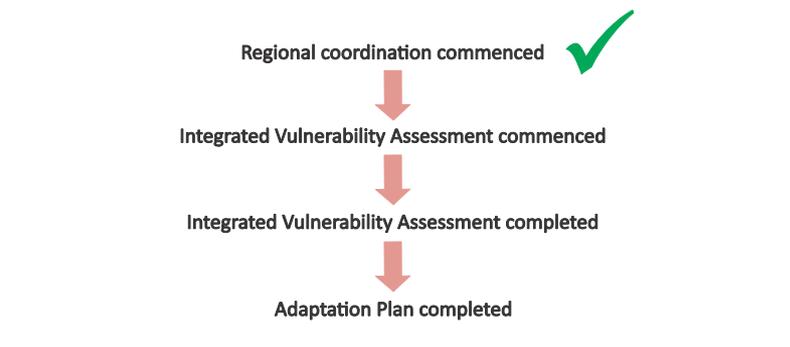

Since the Climate Change Adaptation Framework was established in 2012, there has been progress in developing the Climate Change Adaptation Plan associated with this NRM region (map above).

The Limestone Coast Climate Change Adaptation Plan covers the South East NRM region. The development of the Adaptation Plan requires going through four steps, which are outlined in the Climate Change Adaptation Framework. First is to engage stakeholders, then to undertake a risk assessment of climate impacts on natural resources and assets, known as an integrated vulnerability assessment. This assessment forms the foundation of the Adaptation Plan.

Where we are at (2014) Good The Adaptation Plan is on track for completion by 2016

As of December 2014, the Limestone Coast Climate Change Adaptation Plan had commenced stakeholder engagement (figure on right). The next step is the integrated vulnerability assessment.

The Adaptation Plan is on track to be completed by 2016.

Reliability of information ★★★★★ Excellent
