

2014 Regional Snapshot

How many stakeholders are contributing to NRM projects?

Many organisations and individuals work and invest in managing our natural resources. To coordinate these efforts, all partners work towards a shared vision, which is outlined in each regional NRM plan. NRM boards develop these plans for the use and protection of natural resources in partnership with land holders, community groups, industries, government agencies, non-government organisations, researchers and Aboriginal people.

These [partnerships](#) bring together people, networks and resources to deliver projects and maximise the pools of knowledge, skills, and technical and financial capacity.

Most of these projects are [funded](#) by the Australian Government, but diverse [stakeholder](#) contributions and participation are integral to the project delivery. This report summarises the number of stakeholders, and the number and type of groups involved in NRM projects.

Trend in the number of stakeholders contributing

State target

Ensure people are better informed and improve capacity in NRM decision making

Trend	Unknown	Trends in the numbers of stakeholders and group types contributing to NRM projects will be available in the future
-------	---------	--

No information is available on the trends in the numbers of stakeholders and group types contributing to NRM projects. Trends were not assessed for the SA Murray-Darling Basin NRM regions because 2014 was the first year that these data were available.

Where we are at (2014)	Good	The most common stakeholders were government agencies, land holders and community groups.
------------------------	------	---

In the SA Murray-Darling Basin NRM region in 2014, the most common stakeholders in NRM projects were industry groups, government agencies and land holders (graph on right). Government agencies were typically the Department of Environment, Water and Natural Resources, local council, SA Water and the Department of Planning, Transport and Infrastructure.

In 2014, there were 46 NRM projects in the SA Murray-Darling Basin region and these engaged stakeholders from 9 different group types (graph on right).

Each NRM region has a different strategy to increase and report on its stakeholder base. Not all stakeholders nor their contribution to the delivery of projects are captured in the available data. Future report cards will provide more accurate information on stakeholder's contributions.

Type of groups and the percentage of projects they contribute to in the SA Murray-Darling Basin NRM region in 2014

Reliability of information	★★★★☆ Very good
----------------------------	-----------------
