DEPTH TO HARD ROCK

Classes are based on an interpretation of soil landscape map units which are classified according to the estimated depth to hard rock of the component soils, on a proportional average basis. Hard rock is basement rock and does not include hardpans such as calcrete, ferricrete and silcrete. It is defined as material which is too hard to dig with hand tools.

Average depth to hard rock

NOTES ON USE OF THE MAP

1. The information is derived from limited field inspection, and is subject to change without notice.
2. Boundaries between mapping units should be treated as transition zones.
3. The map is intended to provide a regional overview and should not be used to draw conclusions about conditions at specific locations.
4. The scale of maps should not be enlarged beyond their scale of publication.
5. Independent expert advice should be sought prior to using this information for commercial decision-making.
