SOIL GROUPS

The map depicts the distribution of up to 15 generalised soil groups and is based on an interpretation of soil landscape units which invariably comprise several soils. The most commonly occurring soil group in each landscape is delineated on this map.

- Calcareous soils
- Shallow soils on calcrete or limestone
- Gradational soils with highly calcareous lower subsoil
- Hard red-brown texture contrast soils with neutral to alkaline subsoil
- Cracking clay soils
- Deep loamy texture contrast soils with brown or dark subsoil
- Sand over clay soils
- Deep sands
- Highly leached sands
- Ironstone soils
- Shallow to moderately deep acidic soils on rock
- Shallow soils on rock
- Deep uniform to gradational soils
- Wet soils
- Volcanic ash soils
- Rocks
- Water
- Not applicable

NOTES ON USE OF THE MAP

1. The information is derived from limited field inspection, and is subject to change without notice.
2. Boundaries between mapping units should be treated as transition zones.
3. The map is intended to provide a regional overview and should not be used to draw conclusions about conditions at specific locations.
4. The scale of maps should not be enlarged beyond their scale of publication.
5. Independent expert advice should be sought prior to using this information for commercial decision-making.
