A Vegetation Map of the Western Gawler Ranges, South Australia

PREFACE

A Vegetation Map of the Western Gawler Ranges, South Australia is a further product of the Biological Survey of South Australia

The program of systematic biological surveys to cover the whole of South Australia arose out of a realisation that an effort was needed to increase our knowledge of the distribution of the vascular plants and vertebrate fauna of the state and to encourage their conservation.

Over the last fifteen years, there has been a strong commitment to the Biological Survey by Government and an impressive dedication from hundreds of volunteer biologists.

This vegetation mapping follows on from the Biological Survey of the whole Gawler Ranges in 1985 and focusses on the area covering the new Gawler Ranges National Park and its immediate surrounds. The map was produced using standard methods which are now applied to all biological surveys in the sheep pastoral country, but which were not applied as part of the original 1985 survey.

It is anticipated that the Biological Survey will achieve complete statewide coverage by 2015 and will be an achievement for which we can be very proud. Biologists in the future will be able to measure the direction of long-term ecological change, and we will have substantially improved our knowledge of the biodiversity of South Australia and our ability to adequately manage nature conservation into the future.

IAIN EVANS
Minister for Environment and Heritage
Minister for Recreation, Sport and Racing

A Vegetation Map of the Western Gawler Ranges, South Australia

ABSTRACT

This report consolidates vegetation quadrat data collected during the following four separate surveys:

- 1985 as part of a biological survey of the whole Gawler Ranges.
- 1987, 88, 92 and 93 as part of the pastoral assessment process.
- 1998 as part of the NE Eyre Peninsula agricultural lands vegetation mapping survey.
- 1999 as part of the NW Eyre Peninsula agricultural lands vegetation mapping survey.
- 2000 as part of a specific vegetation survey to fill in gaps in existing coverage.

Data from these surveys was brought up to date taxonomically and used to add to the plant species list from the 1985 biological survey to produce a new total species list for the Gawler Ranges.

Data for the perennial plants only, from these combined quadrats was analysed using PATN exploratory analysis to produce 20 groups based on floristic composition and these are illustrated and described.

Using a combination of Landsat TM imagery and aerial photography, a vegetation map was produced at a scale of 1:100 000 to cover the following standard map sheets:

5932 MINNIPA

5933 YARTOO

6032 CACUPPA

6033 YARDEA

This mapping joined the 1:50 000 agricultural area vegetation mapping and where possible, given the scale change, it has been edge-matched. Line work only for this more detailed mapping is included on the maps in this report.

Twenty vegetation types were mapped and, where possible, were equated to the groups generated by the floristic analysis.

The mint bush *Prostanthera florifera* a plant confined to the rocky hills of the western Gawler Ranges.

A Vegetation Map of the Western Gawler Ranges, South Australia

ACKNOWLEDGEMENTS

Thanks to Lee Heard and Lyn Kajar from the Geographic Asnalysis and Research Group of Planning SA who assisted with vegetation sampling during the vegetation survey in August 2000.

Rangers at the newly established Gawler Ranges National Park, Craig Nixon and Tyson Barnes shared their knowledge of the area, assisted with fieldwork and provided field support to the vegetation survey teams.

Geoff Axford, the Regional Ecologist for the NPWSA northern region based at Pt Augusta supported the project in a number of ways.

Paul Gould provided the data from the Pastoral Assessment sites across the mapping area and Rob Brandle formatted all the site-based floristic data and carried out the PATN analysis.

A Vegetation Map of the Western Gawler Ranges, South Australia

INTRODUCTION

The *Biological Survey of South Australia* is systematically surveying and documenting the distribution of State's plant and animal biodiversity and mapping vegetation on a regional basis. The survey program began in the late 1970s. In October 1985 the third regional survey in the series was carried out in the Gawler Ranges. This survey (Robinson *et al.* 1988) documented the vascular plants and vertebrate fauna across the whole Gawler Ranges area and produced a series of recommendations for further conservation management of the regions characteristic plant and animal communities.

The placing of Paney Station on the market in 1999 provided an opportunity for the Government of South Australia to acquire a part of the Gawler Ranges recognised as a 'Key Biological Area' in the 1988 survey report. Purchase was negotiated with funding support from the Commonwealth Governments National Reserve System Program and the station was added to the State Conservation Reserve System as the Gawler Ranges National Park in mid 2000.

Sheep grazing began in the Gawler Ranges in 1862 (see Robinson *et al.* 1988 for an historical summary). Following the removal of sheep from the former Paney Station, National Parks and Wildlife SA decided it was important to establish a set of baseline information against which future ecological changes, expected to occur in the new National Park, could be compared. A high priority was the production of an adequate vegetation map.

The 1988 Biological Survey Report published a series of small vegetation maps centred on the sites sampled during the field survey, but no other vegetation mapping existed. There was also a floristic analysis, based on the Biological Survey vegetation quadrats, which provided an overview of the floristic relationships across the whole Gawler Ranges area. From 1986 to 1996 the Pastoral Management Group of the Department for Environment and Heritage carried out pastoral assessments covering all the leases in the Gawler Ranges. The pastoral assessment sites provided additional site-based floristic data for the area. In 1999 the Geographic Analysis and Research Unit of Planning SA (Department for Transport, Urban Planning and the Arts) sampled a large series of vegetation sites on North West Eyre Peninsula, to the south of the Gawler Ranges, as part of their standard vegetation mapping program for the agricultural districts of the State.

After taking into account the availability of all of this vegetation data, the Biodiversity Survey and Monitoring Group of National Parks and Wildlife, South Australia agreed to undertake a special project in 2000 to produce a standard set of 1:100000 vegetation maps covering the new Gawler Ranges National Park and surrounding areas. These maps will form part of the set of baseline information required for ecological management and monitoring in the new Park.

A Vegetation Map of the Western Gawler Ranges, South Australia

METHODS

SITE SELECTION AND NOMENCLATURE

The vegetation mapping in this report covers the following 1:100000 topographic map sheets:

5932 MINNIPA
5933 YARTOO
6032 CACUPPA
6033 YARDEA

There are four sources of site based vegetation data for these four map sheets and the immediate surrounding area. This data is included in the PATN analysis as follows:

1985 Biological Survey

All quadrats from the following sites. Note that in the original Gawler Ranges Biological Survey Report (Robinson *et al.* 1988) these sites were given two rather than three letter codes. These are shown in brackets below:

Hiltaba HIL (HL)
Kolendo KOL (KL)
Koweridda KOW (KW)
Paney PAN (PA)
Pine Lodge PIN (PL)
Scrubby Peak SCR (SC)
Yardea YAR (YD)

This part of the 1985 biological survey included 105 quadrats.

1986-1996 Pastoral Lease Assessment

All assessment sites from the following pastoral leases:

Buckleboo
Hiltaba
Moonaree
Mt Ive
Paney
Scrubby Peak
Thurlga

Yardea

3757 records of 319 species at 263 quadrats.

1999 North West Eyre Peninsula Vegetation Survey

All sites on the following four 1:50000 map sheets which form part of the 1:100000 sheets mapped for this survey:

5932-IV CHILPUDDIE
5932-III MINNIPA MIN
5932-II YANINEE YAN
6032-III WUDINNA WUD
6032-II CORROBINNIE COR

2041 records of 351 species at 55 quadrats.

2000 Vegetation Mapping Survey

Additional vegetation quadrats were sampled between 14-23 August 2000. They were chosen to sample areas and vegetation communities not well sampled on previous surveys. There was a concentration of additional quadrats within the new Gawler Ranges National Park area. They included extra quadrats with the following codes:

Hiltaba HIL
Kolendo KOL
Koweridda KOW
Paney PAN
Pine Lodge PIN
Scrubby Peak SCR
Thurlga THU
Yardea YAR

Data from these 33 quadrats was added to the SURVEY database and, when combined with the 1985 survey data included a total of 3254 records of 440 species at 138 quadrats.

The locations of all these quadrats on the four map sheets and surrounding area are shown in Fig. 1. Their grid coordinates and other details are listed in Appendix I.

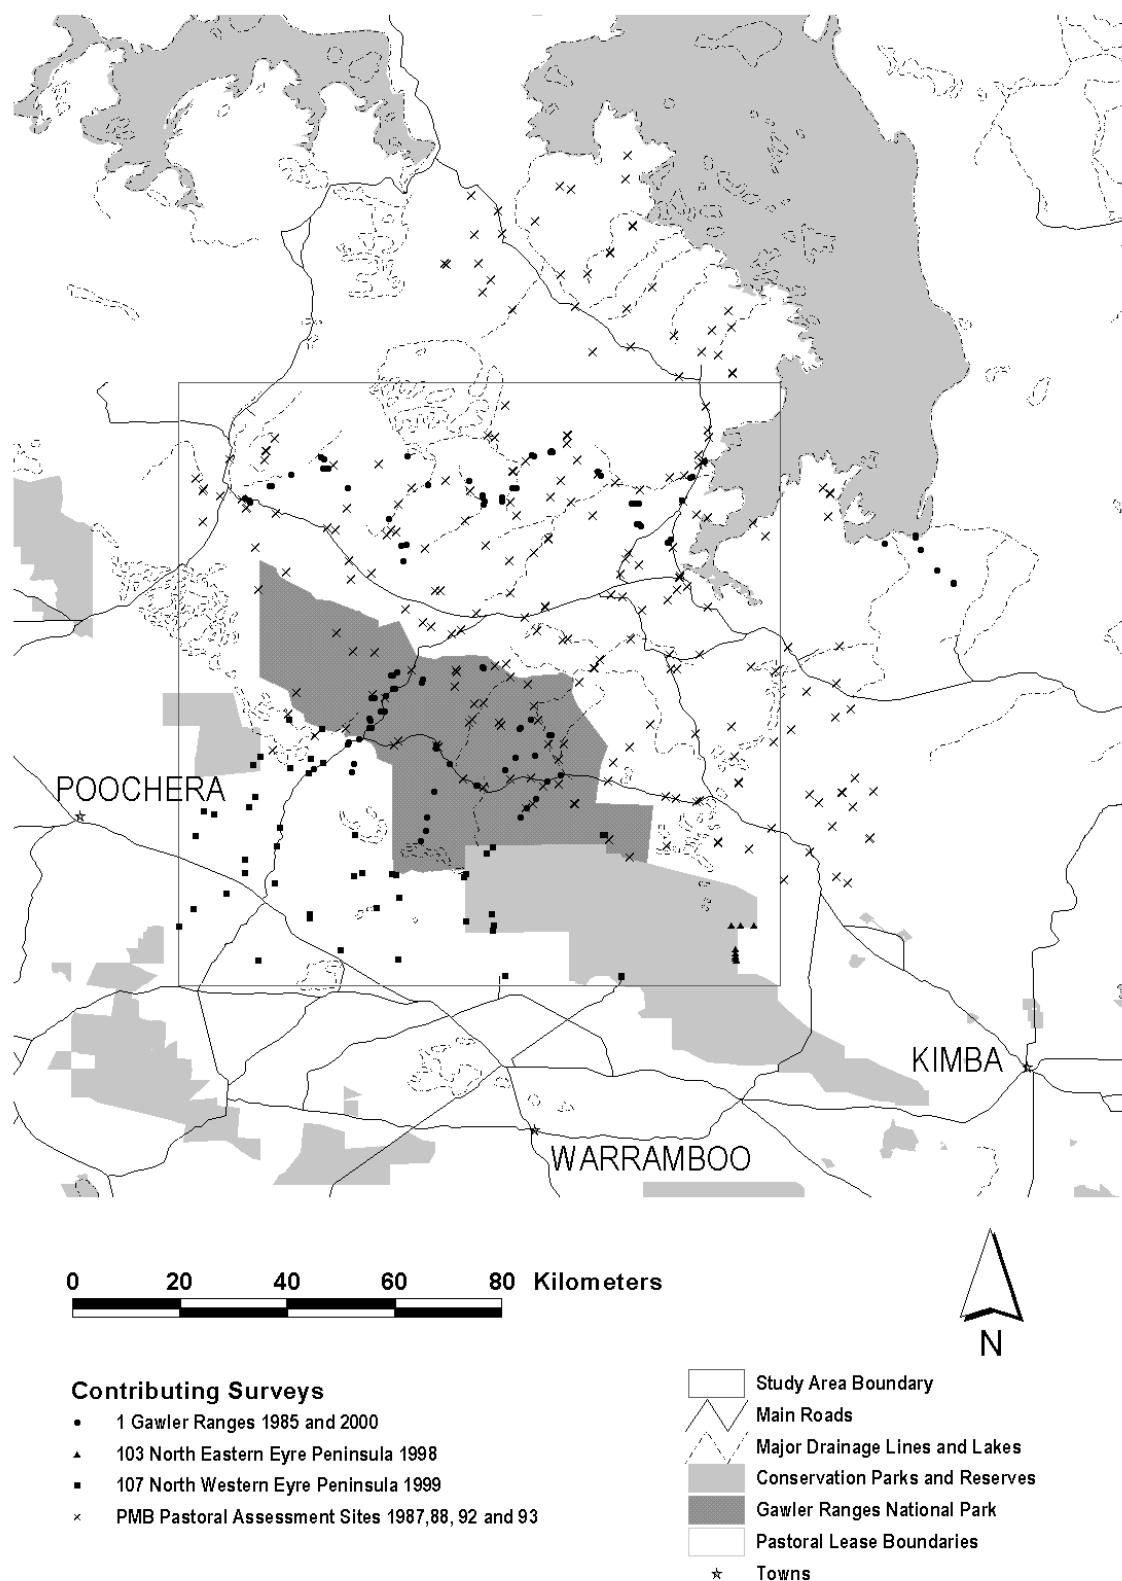

Figure 1. Gawler Ranges vegetation mapping study area showing the locations of all survey quadrats used in floristic analysis.

DATA COLLECTION

There were some differences in vegetation quadrat sampling between the four sources of vegetation quadrat data. The methods used in the 1985 Biological Survey are detailed in Robinson *et al.* (1988). This data was stored in the SURVEY database. Consequently, subsequent taxonomic changes have been made where possible.

The Pastoral Assessment site data provided information on the perennial component of the vegetation only. Details of the methods used to collect this data are in Rangeland Assessment Unit (1988). This data was stored in an ACCESS database which does not have a facility for taxonomic update. Therefore, plant species data from this source were updated to the current taxonomic understanding to match other data.

The 1999 North West Eyre Peninsula Vegetation Survey and the 2000 Vegetation Mapping Survey collected data in an almost identical fashion and included all recognisable ephemeral species in addition to the perennials. See Heard and Channon (1997) for details of the data collection methods. One significant difference was that the 1999 survey used the standard 30m x 30m quadrat size established for agricultural area vegetation surveys while the 2000 survey used 50m x 50m quadrats. Data from both surveys was stored in the SURVEY database and therefore reflects current taxonomic concepts. Both the 1985 and 2000 surveys used standard 1 square kilometre survey sites. Consequently, in many cases, particularly in hilly areas, several habitat patches were recognised and so multiple quadrats were surveyed at the same site.

PLANT SPECIES LIST

A total plant species list was compiled for the Gawler Ranges and immediate surrounds by taking the total list from Robinson *et al.* (1988), and updating it to current taxonomy. This list was then compared with the vegetation quadrat data listed above and any additional species were added to provide the consolidated list in Appendix III.

VEGETATION MAPPING

The Gawler Ranges Vegetation Mapping Survey area straddles the agricultural and pastoral zones, which complicates the vegetation mapping process when compared with other regional surveys. The Geographic Analysis and Research Unit (GAR) of the SA Department for Transport, Urban Planning and the Arts (DTUPA) usually undertake mapping in the agricultural zone. This mapping is generally based on 1:40000 scale aerial photography and 1:50000 scale topographic map data. In the pastoral zone, mapping is normally the responsibility of the Biodiversity Survey and Monitoring Group of the Department for Environment and Heritage. In southern sections of the pastoral zone,

of which the Gawler Ranges is a part, mapping is usually based on 1:100000 scale geo-rectified satellite imagery (Landsat Thematic Mapper) and 1:100000 scale topographic map data enhanced by 1:80000 scale aerial photography. In northern parts 1:250000 scale satellite imagery and map data are used. However, vegetation mapping in the pastoral zone for this survey was based on a slightly different scenario. This was due to the availability of 1:40000 aerial photography covering most of the survey area and 1:50000 topographic map data covering some of the study area. Consequently, mapping for this survey was based on 1:100000 scale imagery, 1:100000 and 1:50000 scale topographic map data and 1:40000 scale aerial photography (listed on the map in the back of this report).

The agricultural and pastoral zones meet approximately at the southern boundary of the former Paney Station. The vegetation mapping undertaken for this project, and presented in this report, covers the area to the north of this line. The GAR Unit has undertaken vegetation mapping for the area south of this line. This mapping is more detailed with extra information in relation to the differentiation of dominant over-story species. This mapping was incomplete at the publication of this report however draft line-work can be seen on the map contained in the back of this report.

All relevant literature, previous vegetation mapping, aerial photography, satellite imagery, topographic and geological maps were reviewed prior to commencing mapping. In addition, any individuals or groups with local knowledge were consulted and some fieldwork was carried out. Based on the available information, and taking into account the scale factor of the mapping, it was decided 20 distinct vegetation associations could be reasonably well identified and delineated. Furthermore, it was determined two non-vegetation mapping groups could also be identified and delineated.

It was decided to individually map vegetation for the four 1:100000 map sheets covering the western Gawler Ranges survey area. Initially, the boundaries of vegetation communities were marked onto laminated, hard copy, 1:100000 scale satellite images, using an Omni-chrome pencil. Digital topographic information was printed onto same scale transparent overlays and these were placed on top of each mapped image. The vegetation community boundaries were transferred to the overlays and then digitised as polygons using ARC/INFO GIS software. Each digitised polygon was edited and coded with a unique identifying number. Each polygon was also assigned a code representing between one and three of the vegetation or non-vegetation mapping groups. Each map sheet was produced as a standard, hard copy, 1:100000 scale vegetation map. These maps are similar in design to a 1:100000 scale topographic map. Each hard copy map was checked in the field for accuracy and later digitally edited if necessary. After final editing, the four

separate, digital vegetation polygon coverages were joined together in order to create one continuous digital vegetation layer covering the study area. This complex layer of digital information is presented as a single 1:250000 scale map in the back of this report. A second larger scale map covering the Gawler Ranges National Park is also provided. The four standardised 1:100000 vegetation map sheets, complete with grid references, drainage and infrastructure information, can be obtained from the Department for Environment and Heritage upon request. A small fee will apply.

Each community is represented on the maps by a unique colour. The colour was chosen to reflect the vegetation itself or the basic landform or soil type on which the community usually occurred.

FLORISTIC ANALYSIS

The site based data were analysed using PATN exploratory data analysis software (Belbin 1989). The analysis was conducted on the total data set based on species which are perennial or consistently detectable in all seasonal conditions. This reduced the number of species from 398 to 241 and the number of records from 9787 to 6777.

The analysis clustered the site species presence/absence data into groups based on similarity. The method of PATN analysis is similar to that used for the Flinders Ranges Survey (Brandle 2001). Once taxonomic consistency had been established for the combined data set used in the analysis, species which only occurred once and quadrats with less than four species and species with less than four records were removed. The final analysis was performed on 241 species at 424 quadrats. This included a total of 6585 records.

A Vegetation Map of the Western Gawler Ranges, South Australia

RESULTS

VEGETATION

INTRODUCTION

The vegetation of the Gawler Ranges as a whole is described in Robinson *et al.* 1988. This report also contains a species list (as Appendix II) of the 740 plant taxa then known for the total area. The plant list in this report (Appendix II) adds species recorded since the 1985 biological survey and updates the list to current taxonomy. The total number of plant taxa now known from the Gawler Ranges has been increased to 885.

Details of the plant species of particular interest are given in Robinson *et al.* (1988) and will not be repeated here. Two additional records resulting from the November 2000 survey were:

The discovery of a population of the Mallee Box (*Eucalyptus odorata*) on the lower slopes of Mt Fairview (PAN02001), which represents a significant new record for the Gawler Ranges and the northern limit for this species on Eyre Peninsula. The nearest specimen records in the Plant Biodiversity Centre are: 28 km WNW of Cowell (1979), Between Darke Peak and Carappee Hill (1980), Just N of Darke Peak (1980) and Iron Dutchess, Middleback Range (1981).

The record of the Twin-leaf Sunray (*Rhodanthe oppositifolia*) from a hill north of Paney woolshed (PAN01401) represents the third record for South Australia of this Western Australian species. The Gawler Ranges appear to support the eastern most population with the only other records in the Plant Biodiversity Centre being from: S Gawler Ranges (1939) and Second hill E of Mt St Mungo (1989).

A second population of a long-stemmed *Acacia* similar to *Acacia notabilis* was discovered on Yardea at YAR00901. It seems to occur mostly on ridgelines and is also known from the Tondulya area. The relationships of this form are currently being investigated by Martin O'Leary of the Plant Biodiversity Centre

PATN, an exploratory analysis program, was used to clump the 424 quadrats into 20 groups based on the similarity of their floristic composition (using species presence data). The dissimilarity cut off value of approximately 1, which was used to define the 20 groups, is similar to the levels used in other regional surveys (Robinson *et al.* 1988, Brandle 1998, Brandle 2001).

Detailed descriptions are provided for 19 of the 20 floristic groups defined using PATN. Note that PATN group 20 consisted of a single quadrat (PMB3244) on Mt Allalone. This vegetation was re-sampled in the 2000 vegetation survey and was classified in PATN group 18, so group 20 was deleted. The layout of each group is as follows :

- PATN group number followed by the descriptive title that includes the dominant overstorey species, the vegetation structural classification for South Australia and the dominant understorey species.
- The number of sites contributing to the group.
- The total number of perennial species recorded at sites defining the group.
- A brief description of the location, landform, soils and variation across the group. The most important indicator species are also listed.
- A table of statistics for the species that occur in the group at frequencies of greater than 40%.
- A map of the study area with the location of the sites contributing to the group.
- A picture of one of the sites comprising the group.

The sites contributing to each group are detailed in Appendix I. The number of quadrats in each floristic group which fell into a particular Landform, Land Unit and Surface Soil Texture category is given in Appendix II (Note that this data was not available for all quadrats in the data set).

SPECIES PATTERNS

Group 1. *Halosarcia indica* ssp. *leiostachya* Brown-head Samphire Low shrubland.

Number of sites in group: 11

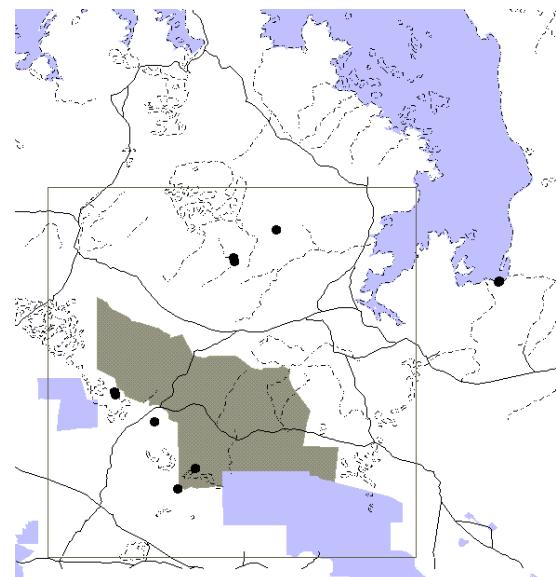

Number of perennial species in group: 34

A Low shrubland to Low open shrubland fringing salt lakes and depressions with sandy clay or sandy clay loam soils. Important indicator species include *Halosarcia indica* ssp. *leiostachya* Brown-head Samphire and *Disphyma crassifolium* ssp. *clavellatum* Round-leaf Pigface.

SPECIES	Common Name	% site freq.	Signif. to group (χ^2)	# sites in group	# sites in all groups	Presence in all groups
<i>Halosarcia indica</i> ssp. <i>leiostachya</i>	brown-head samphire	73	457.66	8	10	2

<i>Enchyalaena tomentosa</i> var. <i>tomentosa</i>	ruby saltbush	45	2.67	5	181	18

Figure 2. *Halosarcia indica* ssp. *leiostachya* Brown-head Samphire Low shrubland at quadrat PAN00701

Group 2. *Maireana sedifolia* Pearl Bluebush +/- *Atriplex vesicaria* Bladder Saltbush Low shrubland +/- an overstorey of *Alectryon oleifolius* Bullock Bush.

Number of sites in group: 22

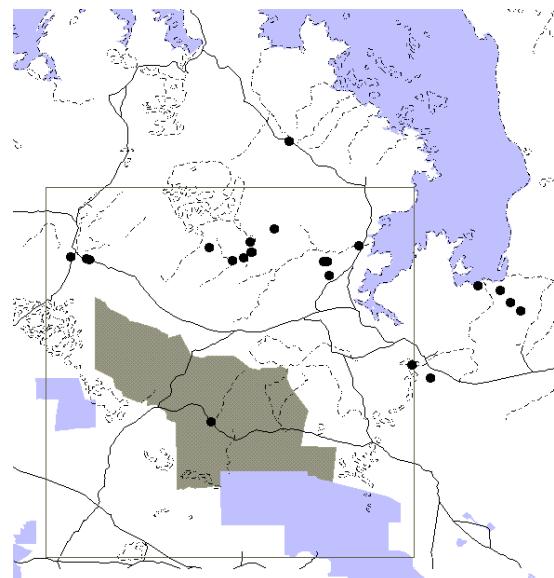

Number of perennial species in group: 78

In its purest form this group is a low shrubland of *Maireana sedifolia* Pearl Bluebush and it tends to occur on the sandy clay loams in the broad valleys and occasionally on hill footslopes. It continues as an understory into much of Group 3. There are no clearly defined indicator species for this group.

Group 3. *Acacia papyrocarpa* Western Myall Low woodland over +/- *Atriplex vesicaria* Bladder Saltbush and/or *Maireana sedifolia* Pearl Bluebush.

Number of sites in group: 78

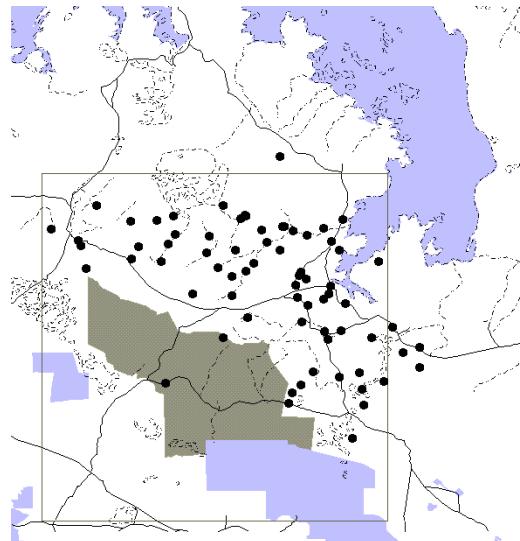

Number of perennial species in group: 79

Distinguished from Group 2 by the presence of a Low woodland of *Acacia papyrocarpa* Western Myall and also confined to the sandy clay loams of the plains and broad valley systems.

SPECIES	Common Name	% site freq.	Signif. to group (χ^2)	# sites in group	# sites in all groups	Presence in all groups
<i>Acacia papyrocarpa</i>	western myall	88	126.12	69	126	11

<i>Carrichtera annua</i> *	Ward's weed	73	15.05	57	222	16

Figure 4. *Acacia papyrocarpa* Western Myall Low woodland at quadrat THU00101

Group 4. *Carrichtera annua* Wards Weed Herbland +/- *Stipa* spp. +/- *Sclerolaena* spp. +/- an overstory of *Alectryon oleifolius* Bullock Bush.

Number of sites in group: 49

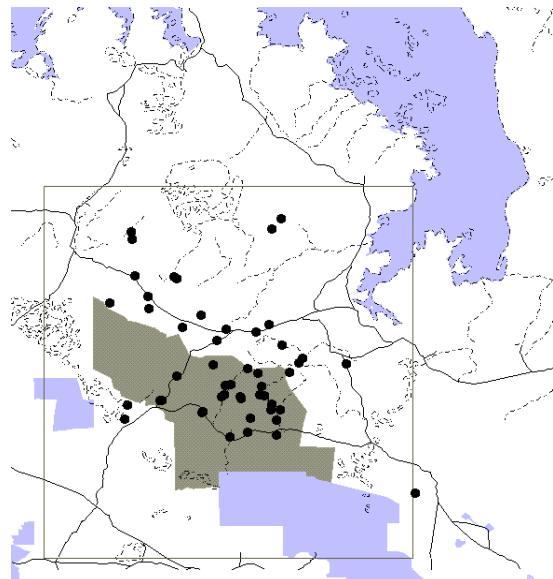

Number of perennial species in group: 84

The most extreme form of this group is illustrated where past heavy grazing has removed most of the perennial shrub component and left a herbland dominated by ephemeral species. Other variants that are more intact include the *Eucalyptus porosa* Mallee Box Open Mallee along drainage lines in the central part of the study area.

SPECIES	Common Name	% site freq.	Signif. to group (χ^2)	# sites in group	# sites in all groups	Presence in all groups

Number of sites in group: 16

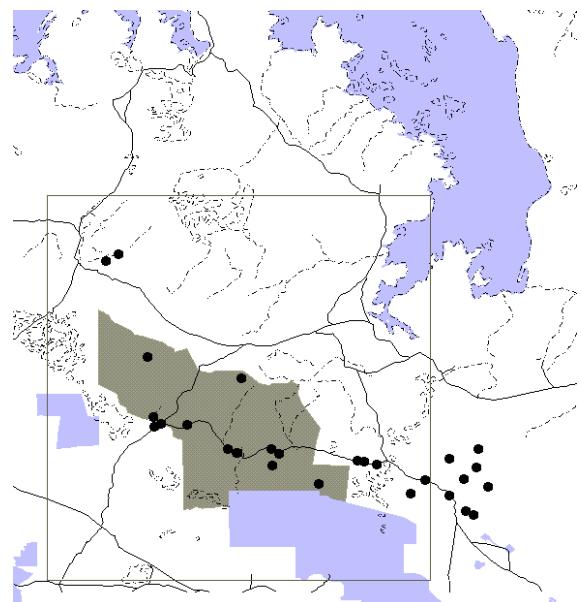

Number of perennial species in group: 98

To an extent these spear grass areas may be an artefact of past grazing where the perennial shrub component has been largely removed. It is possible however that there were always some areas of grassland in the southern part of the Gawler Ranges. They occur on the sandy clay loams of the plains and wide valleys and form a mosaic with Groups 4 and 5.

Group 7. *Eucalyptus oleosa* Red Mallee +/- *Eucalyptus gracilis* Yorrell +/- *Eucalyptus brachycalyx* Gilja Tree mallee over *Geijera linearifolia* Sheep-bush, *Olearia muelleri* Muellers Daisy-bush.

Number of sites in group: 17

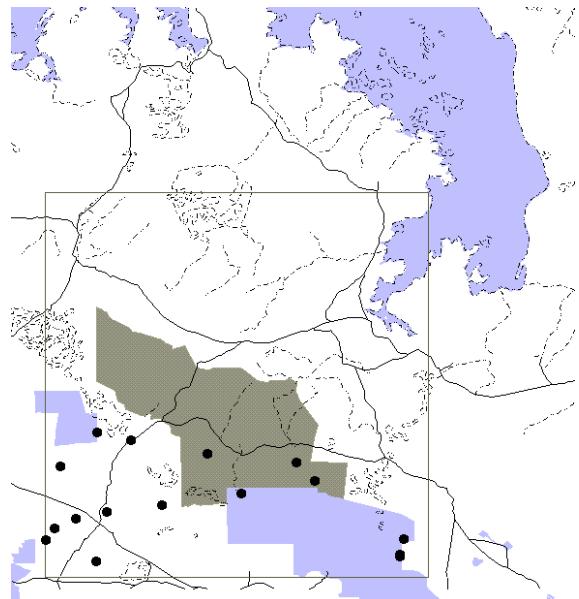

Number of perennial species in group: 80

A Tree mallee dominated by *Eucalyptus oleosa* Red Mallee and *Eucalyptus brachycalyx* Gilja with scattered patches of *Eucalyptus gracilis* Yorrell. It occurs on clay loams and sandy clay loams of the plains in the most southern Gawler Ranges. It is closely related to Group 8, but can be distinguished by the absence of Bluebush and *Cratystylis conocephala* Bluebush Daisy.

Figure 17. *Acacia tarculensis* Tall open shrubland +/- *Triodia irritans* Spinifex at quadrat HIL00401

Group 18. *Melaleuca uncinata* Mallee BroombushOpen shrubland.

Number of sites in group: 9

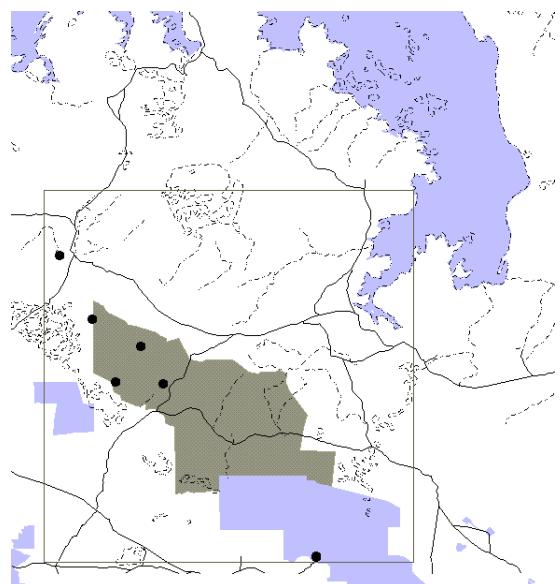

Number of perennial species in group: 53

A vegetation community on the sandy loams adjacent to rocky hills in the areas of higher rainfall of the study area. It has considerable variation in species composition between the small number of quadrats sampled in this study.

SPECIES	Common Name	% site freq.	Signif. to group (χ^2)	# sites in group	# sites in all groups	Presence in all groups
<i>Acacia beckleri</i>	Beckler's rock wattle	78	84.10	7	29	6

Number of sites in group: 23

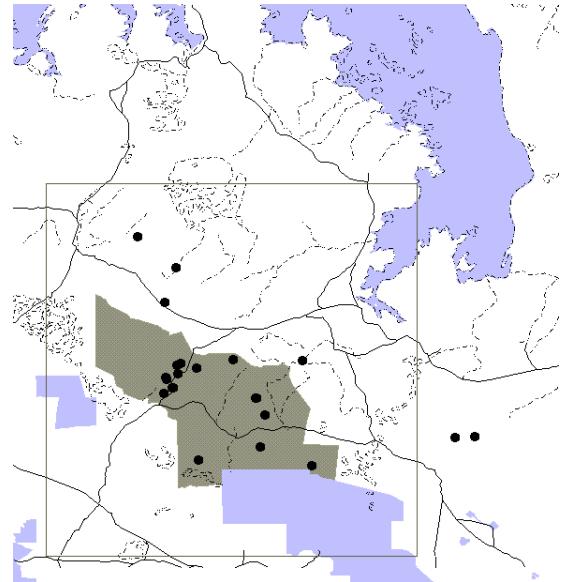

Number of perennial species in group: 116

Found on the loams and shallow skeletal soils of the lower slopes of hills in the wetter more south-westerly parts of the study area. It is essentially a shrubland with emergent patches of *Eucalyptus porosa* Mallee Box and White Mallee.

SPECIES	Common Name	% site freq.	Signif. to group (χ^2)	# sites in group	# sites in all groups	Presence in all groups

A Vegetation Map of the Western Gawler Ranges, South Australia

VEGETATION MAPPING

Vegetation maps covering the whole study area and a larger scale map covering the Gawler Ranges National Park are included in the pocket at the back of this report.

On these maps, an uninterrupted block of colour represents a homogeneous area where one community is relatively dominant. If a homogeneous vegetation community was deemed too small to be mapped individually, then it was mapped as part of a mosaic. Indeed, it became necessary to map the 20 distinct vegetation communities as part of a mosaic on numerous occasions. In the case of a mosaic, cross-hatching and numbers are printed on top of the block of colour. The cross-hatching confirms the area is a mosaic of vegetation communities. The numbers (eg: 12/13/5) represent the vegetation communities constituting the mosaic. These are listed in the order of most to least dominant and can be cross-referenced to the 'vegetation communities' key for details.

KEY OF THE VEGETATION MAPPING

DRAINAGE LINES, FLOODOUTS, LAKES AND RUN-ON LANDFORMS

1: *Muehlenbeckia florulenta* Lignum Shrubland.

Confined to a small area of freshwater ephemeral swamps to the south-west of Lake Gairdner it was not specifically sampled as a quadrat.

2: *Halosarcia indica* ssp. *leiostachya* Brown-head Samphire Low shrubland.

Found fringing salt lakes and depressions with sandy clay or sandy clay loam soils it is represented by floristic group 1.

3: *Eucalyptus porosa* Mallee Box Open woodland.

Associated with drainage lines in the valleys of the southern ranges it is part of floristic group 19.

4: *Maireana pyramidata* Blackbush +/- *Atriplex vesicaria* Bladder Saltbush Low shrubland.

Confined to the loamy floodout plains leading into Lake Gairdner it is represented by floristic group 12.

5: *Acacia ligulata* Umbrella Bush Tall closed shrubland +/- *Dodonaea viscosa* ssp. *angustissima*

Narrow-leaf Hop-bush +/- *Alectryon oleifolius* Bullock Bush.

A single drainage channel flowing into Lake Gairdner from the west supported this vegetation community. The single quadrat sampling it (KOW00402) was included in floristic group 9. This community also occurred on a lunette on the eastern shore of Lake Acraman.

PLAINS AND RISES

6: *Stipa* spp. Open tussock grassland +/- an overstory of *Alectryon oleifolius* Bullock Bush.

Patchily distributed through the southern areas in broad valleys it is represented by floristic group 6.

7: *Atriplex vesicaria* Bladder Saltbush +/- *Maireana sedifolia* Pearl Bluebush Low shrubland +/- an overstory of *Alectryon oleifolius* Bullock Bush.

Found in broad valleys and the northern plains, the relative dominance of Bladder Saltbush and Pearl Bluebush characterises this and community 8. They are both included in floristic group 2.

8: *Maireana sedifolia* Pearl Bluebush +/- *Atriplex vesicaria* Bladder Saltbush Low shrubland +/- an overstory of *Alectryon oleifolius* Bullock Bush.

Found in broad valleys and the northern plains, the relative dominance of Bladder Saltbush and Pearl Bluebush characterises this and community 7. They are both included in floristic group 2.

9: *Carrichtera annua* Wards Weed Herbland +/- *Stipa* spp. +/- *Sclerolaena* spp. +/- an overstory of *Alectryon oleifolius* Bullock Bush.

This is an artifact of past grazing of communities 7 and 8 and is found in the southern parts of the study area where more reliable rainfall allowed heavier stocking rates in the past. It is represented by floristic group 4.

10: *Acacia papyrocarpa* Western Myall Low woodland over +/- *Atriplex vesicaria* Bladder Saltbush and/or *Maireana sedifolia* Pearl Bluebush.

A widespread community of the northern plains it is represented by floristic group 3.

11: *Eucalyptus odorata* Peppermint Box Mallee +/- *Eucalyptus* spp.

Confined to the lower slopes of Mt Fairview (PAN02001), this is probably the northern limit for this community on Eyre Peninsula.

SAND DUNES AND SAND PLAINS

12: *Eucalyptus oleosa* Giant Mallee +/- *Eucalyptus gracilis* Yorrell +/- *Eucalyptus brachycalyx* Gilja over *Atriplex vesicaria* Bladder Saltbush +/- *Cratystylis conocephala* False Bluebush.

This community occurs on clay loams and sandy clay loams of the plains in the most southern Gawler Ranges. It is represented by floristic groups 7 and 8.

13: *Eucalyptus incrassata* Ridge-Fruited Mallee +/- *Eucalyptus socialis* Red Mallee over +/- *Melaleuca uncinata* Mallee Broombush, *Leptospermum coriaceum* Dune Tea-tree, *Calytrix involucrata* Cup Fringe-myrtle and/or *Triodia irritans* Spinifex.

Confined to the extensive dune systems in the south of the study area, it includes floristic group 15.

14: *Callitris preissii* Southern Cypress Pine Low open woodland +/- *Callitris glaucophylla* White Cypress Pine +/- *Callitris verrucosa* Mallee Cypress Pine .

Predominantly found on the lunette dunes and islands of Lake Acraman, there is a related community on sandy soils of the Pine Lodge area. It is represented in part by floristic group 9.

HILLS AND RANGES

15: *Casuarina pauper* Black Oak Low open woodland.

A Low open woodland of the hill footslopes where limestone either outcrops or is close to the surface, it is represented by floristic group 5.

16: *Acacia anuera* Mulga Very low open woodland over *Ptilotus obovatus* Silver Mulla Mulla.

Confined to rocky hill slopes in the northern more arid parts of the study area, it is represented by floristic group 11.

17: *Triodia irritans* Spinifex Hummock grassland.

Widespread on the hills of the Gawler Ranges, it is represented by floristic groups 16, 17 and 18

18: *Acacia tarculensis* Tall open shrubland +/- *Triodia irritans* Spinifex.

Found on hills in the drier northern parts of the ranges it is represented by floristic groups 11 and 17.

19: *Melaleuca uncinata* Mallee Broombush Open shrubland over *Triodia irritans* Spinifex +/- an overstory of *Eucalyptus socialis* Red Mallee.

Found on hills in the wetter southern part of the ranges, it is represented by floristic groups 18 and 19.

20: *Allocasuarina verticillata* Drooping Sheaoak Very low open woodland.

Not sampled as a quadrat. It is confined to south-facing hill slopes on Paney and Scrubby Peak.

Clay pans or salt lakes or water bodies are indicated in blue on the vegetation maps while agricultural, cleared or severely degraded areas are shown in pink. They may contain small patches of remnant natural vegetation below the level of resolution of this 1:100 000 scale vegetation mapping.

The pale yellow areas to the east of the mapping represent 'Vegetation associations occurring outside of study area'.

For much of the mapping of this topographically complex area the map is cross hatched indicating a mosaic of two or more vegetation associations. The components of the mosaic, in order of occurrence are indicated by the numbers on the map (refer to above key eg: 7/11/13).

The green line work to the south of the mapping represents areas being mapped at 1:50 000 scale as part of the agricultural regions vegetation mapping program. The Gawler Ranges mapping has been edge-matched and joined to this mapping where possible. However, the recognition of extra vegetation communities at this more detailed scale has meant some linework does not join across the two study areas.

Appendix III

PLANT SPECIES RECORDED FROM THE GAWLER RANGES AND THEIR IMMEDIATE SURROUNDS.

Plant taxonomy follows Jessop (1993) as updated by the SAFLORA database in September 2000. It also includes some recent taxonomic changes still awaiting incorporation into SAFLORA. Common names are from Jessop and Toelken (1986) and/or the SAFLORA database. Where species names have been changed since publication of the original Gawler Ranges Biological Survey report (Robinson *et al.* 1989), the details are recorded in the footnotes. Introduced species are marked with an asterisk.

Scientific Name	Common Name	Robinson <i>et al.</i> (1988)	Pastoral Assessment	NW Eyre Peninsula (1999)	Vegetation mapping (1985, 2000) quadrat	Vegetation mapping (2000) opportune
ADIANTACEAE						
<i>Cheilanthes austrotenuifolia</i>	annual rock-fern	+			+	
<i>Cheilanthes distans</i>	bristly cloak-fern	+			+	
<i>Cheilanthes lasiophylla</i>	woolly cloak-fern	+			+	
<i>Cheilanthes sieberi</i> ssp. <i>pseudovellea</i>	narrow rock-fern	+		+	+	
<i>Cheilanthes sieberi</i> ssp. <i>sieberi</i>	narrow rock-fern	+		+	+	
AIZOACEAE						
<i>Carpobrotus rossii</i>	native pigface	+				
<i>Disphyma crassifolium</i> ssp. <i>clavellatum</i>	round-leaf pigface	+		+	+	
<i>Gumniopsis calva</i>						
<i>Gumniopsis quadrifolia</i>	Sturt's pigface	+	+		+	
<i>Gumniopsis septifraga</i>	green pigface	+			+	
* <i>Mesembryanthemum crystallinum</i>	common iceplant	+		+	+	
* <i>Mesembryanthemum nodiflorum</i>	slender iceplant	+	+	+	+	
<i>Sarcozona praecox</i>	sarcozona	+				
<i>Tetragonia eremaea</i>	desert spinach	+	+	+	+	
<i>Tetragonia tetragonoides</i>	New Zealand spinach	+		+	+	

Scientific Name	Common Name	Robinson <i>et al.</i> (1988)	Pastoral Assessment	NW Eyre Peninsula (1999)	Vegetation mapping (1985, 2000) quadrat	Vegetation mapping (2000) opportune
AMARANTHACEAE						
<i>Ptilotus decipiens</i>		+			+	
<i>Ptilotus exaltatus</i> var. <i>exaltatus</i>	pink mulla mulla	+			+	
<i>Ptilotus gaudichaudii</i> var. <i>gaudichaudii</i>	paper fox-tail	+			+	
<i>Ptilotus obovatus</i> var. <i>obovatus</i>	silver mulla mulla	+	+	+	+	
<i>Ptilotus polystachyus</i> var. <i>polystachyus</i>	long-tails	+				
<i>Ptilotus seminudus</i>	rabbit-tails	+		+	+	
<i>Ptilotus sessiliflorus</i> var. <i>sessiliflorus</i>	pussy-tails	+	+	+	+	+
<i>Ptilotus spathulatus</i>		+	+	+	+	
APOCYNACEAE						
<i>Abertia buxifolia</i>	sea box	+	+	+	+	
ASCLEPIDACEAE						
<i>Marsdenia australis</i>	native pear	+				
<i>Sarcostemma viminale</i> ssp. <i>australe</i>	caustic bush	+ ²				
ASPLENIACEAE						
<i>Pleurozorus rutifolius</i>	blanket fern	+		+		
<i>Pleurozorus subglandulosus</i>	clubbed blanket fern	+		+		
BORAGINACEAE						
* <i>Buglossoides arvensis</i>	sheepweed	+			+	
<i>Cynoglossum australe</i>	Australian hound's-tongue	+				
* <i>Echium plantagineum</i>	Salvation Jane	+	+			
<i>Embadium uncinatum</i>	Crawler Ranges slipper-plant	+			+	
<i>Heliotropium aspernum</i>	rough heliotrope	+			+	
* <i>Heliotropium europaeum</i>	common heliotrope	+	+			
* <i>Heliotropium supinum</i>	creeping heliotrope	+				
* <i>Neatostema apulum</i>	hairy sheepweed	+			+	
<i>Omphalolappula concava</i>	burr sticksseed	+			+	
<i>Plagiobothrys pluriseptaeus</i>	white rochelia	+

⁵⁷ As *Prasophyllum patens* var. *patens* in Robinson et al. (1989)

Scientific Name	Common Name	Robinson <i>et al.</i> (1988)	Pastoral Assessment	NW Eyre Peninsula (1999)	Vegetation mapping (1985, 2000) quadrat	Vegetation mapping (2000) opportune
<i>Pterostylis hispida</i>	two-bristle greenhood	+				
<i>Pterostylis excelsa</i>	dryland greenhood		+			
<i>Pterostylis mutica</i>	midget greenhood	+	+	+	+	+
<i>Pterostylis nana</i>	dwarf greenhood	+	+			
<i>Pterostylis ovata</i>	Cawler Ranges greenhood	+		+		
<i>Pterostylis pusilla</i>	small rusty-hood		+			
<i>Pterostylis sanguinea</i>	blood greenhood	+ ⁵⁸				
<i>Theelomitra nuda</i>	scented sun-orchid	+		+	+	
OXALIDACEAE						
<i>Oxalis perennans</i>	native sorrel	+		+	+	
PAPAVERACEAE						
* <i>Papaver hybridum</i>	rough poppy	+ ⁵⁹				
* <i>Papaver somniferum</i> ssp. <i>setigerum</i>	small-flower opium poppy					
PITTOSPORACEAE						
<i>Billardiera cymosa</i>	sweet apple-berry	+		+	+	
<i>Bursaria spinosa</i>	sweet bursaria	+		+	+	
<i>Pittosporum phylliraoides</i> var <i>microcarpa</i>	native apricot	+	+	+	+	
PLANTAGINACEAE						
<i>Plantago cunninghamii</i>	clay plantain	+				
<i>Plantago drummondii</i>	dark plantain	+	+	+	+	
<i>Plantago</i> sp. B	little plantain		+			
POLYGALACEAE						
<i>Comeperma scoparium</i>	broom milkwort	+		+	+	
<i>Comeperma volubile</i>	love creeper	+		+	+	
POLYGONACEAE						
* <i>Acetosa vesicaria</i>	rosy dock	+		+	+	
* <i>Emex australis</i>	three-corner jack	+				
<i>Muehlenbeckia adpressa</i>	climbing lignum	+			+	+
<i>Muehlenbeckia florulenta</i>	Lignum	+			+	+
<i>Polygonum plebeium</i>	small knotweed	+				

⁵⁸ As *Pterostylis vittata* in Robinson et al. (1989)
⁵⁹ As *Papaver setigerum* in Robinson et al. (1989)

Scientific Name	Common Name	Robinson <i>et al.</i> (1988)	Pastoral Assessment	NW Eyre Peninsula (1999)	Vegetation mapping (1985, 2000) quadrat	Vegetation mapping (2000) opportune
<i>Rumex brownii</i>	slender dock	+				
<i>Rumex crystallinus</i>	glistening dock	+			+	
<i>Rumex dumosus</i> var <i>dumosus</i>	wiry dock	+			+	
PORTULACACEAE						
<i>Calandrinia calyptrata</i>	pink purslane	+		+	+	+
<i>Calandrinia corrugioloides</i>	strap purslane		+	+		
<i>Calandrinia disperma</i>	two-seed purslane	+		+	+	
<i>Calandrinia eremaea</i>	dryland purslane	+		+	+	
<i>Calandrinia granulifera</i>	pigmy purslane	+		+	+	
<i>Calandrinia polyandra</i> var. <i>polyandra</i>	Parakeelya	+		+		
<i>Portulaca oleracea</i>	common purslane	+				
PRIMULACEAE						
* <i>Anagallis arvensis</i>	Pimpernel	+		+	+	+
PROTEACEAE						
<i>Grevillea aethiopolia</i>		+ ⁶⁰		+	+	+
<i>Grevillea aspera</i>	rough grevillea	+		+	+	+
<i>Grevillea huegelii</i>	comb grevillea	+		+	+	+
<i>Grevillea juncea</i>	honeysuckle grevillea	+		+	+	
<i>Grevillea nematophylla</i>	water bush	+				
<i>Grevillea parallinervis</i>	Cawler Ranges grevillea		+		+	
<i>Grevillea pterosperma</i>	dune grevillea	+		+	+	
<i>Grevillea sarissa</i> ssp. <i>umbellifera</i>	desert comb grevillea	+ ⁶⁺				
<i>Hakea cycloptera</i>	elm-seed hakea		+	+	+	
<i>Hakea francisiana</i>	bottlebrush hakea	+		+	+	
<i>Hakea leucoptera</i> ssp. <i>leucoptera</i>	silver needlewood	+		+	+	
<i>Hakea muelleriana</i>	heath needlebush	+		+		
RANUNCULACEAE						
<i>Clematis microphylla</i>	old man's beard					+
<i>Myosurus minimus</i> var. <i>australis</i>	Mousetail	+				
<i>Ranunculus hamatosetosus</i>	hill buttercup	+				

⁶⁰ As *Grevillea biternata* in Robinson et al. (1989)
⁶¹ As *Grevillea umbellifera* in Robinson et al. (1989)

Scientific Name	Common Name	Robinson <i>et al.</i> (1988)	Pastoral Assessment	NW Eyre Peninsula (1999)	Vegetation mapping (1985, 2000) quadrat	Vegetation mapping (2000) opportune
<i>Ranunculus sessiliflorus</i> var. <i>sessiliflorus</i>	annual buttercup	+				
<i>RHAMNACEAE</i>						
<i>Cryptandra amara</i> var. <i>amara</i>	spiny cryptandra		+			
<i>Cryptandra amara</i> var. <i>floribunda</i>	pretty cryptandra	⁶²	+			
<i>Cryptandra leucophracta</i>	white cryptandra	+	+		+	
<i>Cryptandra propinqua</i>	silky cryptandra		+			
<i>Pomaderria paniculosa</i> ssp. <i>paniculosa</i>	mallee pomaderria	+	+	+	+	
<i>Spyridium bifidum</i> var. <i>bifidum</i>	forked spyridium	+	+			
<i>Spyridium subochreatum</i> var. <i>subochreatum</i>	velvet spyridium		+			
<i>Spyridium tridentatum</i>	trident spyridium	+	+			
<i>RUBIACEAE</i>						
<i>Asperula conferta</i>	common woodruff	+				
<i>Galium australe</i>	tangled bedstraw			+		
<i>Galium binifolium</i>	reflexed bedstraw	+		+		
<i>Galium gaudichaudii</i>	rough bedstraw	+		+		
<i>Galium migrans</i>	loose bedstraw	+		+		
* <i>Galium murale</i>	small bedstraw	+		+		
<i>Opercularia scabrida</i>	stalked stinkweed	+				
<i>Opercularia turpis</i>	twiggy stinkweed	+		+		
<i>Pomax umbellata</i>	Pomax	+	+	+		
<i>RUTACEAE</i>						
<i>Boronia coerulescens</i> ssp. <i>coerulescens</i>	blue boronia	+			+	
<i>Boronia inornata</i> ssp. <i>leptophylla</i>	dryland boronia			+		
<i>Correa reflexa</i> var. <i>coriacea</i>	thick-leaf correa	+			+	
<i>Eriostemon linearis</i>	narrow-leaf wax-flower	+		+	+	
<i>Geijera linearifolia</i>	sheep bush	+		+	+	
<i>Phebalium bullatum</i>	silvery phebalium	+		+	+	
<i>SANTALACEAE</i>						
<i>Exocarpos aphyllus</i>	leafless cherry	+		+		
<i>Exocarpos sparteus</i>	slender cherry	+		+		
<i>Leptomeria preissiana</i>		+				

⁶² As *Cryptandra tomentosa* in Robinson et al. (1989)

Scientific Name	Common Name	Robinson <i>et al.</i> (1988)	Pastoral Assessment	NW Eyre Peninsula (1999)	Vegetation mapping (1985, 2000) quadrat	Vegetation mapping (2000) opportune
<i>Santalum acuminatum</i>	Quandong	+	+	+	+	+
<i>Santalum lanceolatum</i>	Plumbush		+			
<i>Santalum murrayanum</i>	bitter quandong	+	+	+	+	+
<i>Santalum spicatum</i>	Sandal wood	+				
SAPINDACEAE						
<i>Dodonaea baueri</i>	crinkled hop-bush	+	+	+	+	+
<i>Dodonaea bursariifolia</i>	small hop-bush	+	+	+	+	+
<i>Dodonaea hexandra</i>	horned hop-bush	+	+	+	+	+
<i>Dodonaea intricata</i>	Cawler Ranges hop-bush	+	+	+	+	+
<i>Dodonaea lobulata</i>	lobed-leaf hop-bush	+	+	+	+	+
<i>Dodonaea microzyga</i> var. <i>microzyga</i>	brilliant hop-bush	+				
<i>Dodonaea stenozyga</i>	desert hop-bush		+	+		
<i>Dodonaea viscosa</i> ssp. <i>angustissima</i>	narrow-leaf hop-bush	+	+	+	+	+
<i>Dodonaea viscosa</i> ssp. <i>spatulata</i>	sticky hop-bush		+			
<i>Alectryon oleifolius</i> ssp. <i>canescens</i>	bullock bush		+ ⁶³		+	
SCROPHULARIACEAE						
<i>Glossostigma drummondii</i>	desert mud-mat	+				
<i>Glossostigma cleistanthum</i>	spoon mud-mat	+ ⁶⁴				
<i>Limosella australis</i>	Australian mudwort	+				
<i>Limosella curdieana</i>		+				
<i>Stemodia florulenta</i>	Bluerod	+ ⁶⁵				
* <i>Zaluzianskya divaricata</i>	spreading night-phlox	+				
SOLANACEAE						
<i>Anthocercis anisantha</i> ssp. <i>collina</i>	Cawler Ranges ray-flower	+				
<i>Duboisia hopwoodii</i>	Pituri	+	+	+	+	+
<i>Grammosolen truncatus</i>	shrubby ray-flower	+	+	+	+	+
<i>Lycium australe</i>	Australian boxthorn	+	+	+	+	+
* <i>Lycium ferocissimum</i>	African boxthorn	+				
* <i>Nicotiana glauca</i>	tree tobacco	+	+	+	+	+

⁶³ As *Heterodendrum oleaeifolium* in Robinson et al. (1989)

⁶⁴ As *Glossostigma* sp. A in Robinson et al. (1989)

⁶⁵ As *Morgania floribunda* in Robinson et al. (1989)

Scientific Name	Common Name	Robinson <i>et al.</i> (1988)	Pastoral Assessment	NW Eyre Peninsula (1999)	Vegetation mapping (1985, 2000) quadrat	Vegetation mapping (2000) opportune
<i>Nicotiana goodspeedii</i>	small-flower tobacco	+			+	
<i>Nicotiana maritima</i>	coast tobacco	+			+	
<i>Nicotiana occidentalis</i> ssp. <i>obliqua</i>	western tobacco	+			+	
<i>Nicotiana velutina</i>	velvet tobacco	+		+	+	
<i>Solanum capsiciforme</i>	capsicum kangaroo-apple	+			+	
<i>Solanum coactiliferum</i>	tomato-bush	+	+	+	+	
<i>Solanum ellipticum</i>	velvet potato-bush	+	+	+	+	
<i>Solanum esuriale</i>	Quena	+				
<i>Solanum hystrix</i>	Afghan thistle	+				
* <i>Solanum nigrum</i>	black nightshade	+	+	+	+	
<i>Solanum petrophilum</i>	rock nightshade	+	+	+	+	
<i>Solanum simile</i>	Kangaroo apple	+		+	+	
<i>Solanum sturtianum</i>	Sturt's nightshade	+	+	+	+	
STACKHOUSIACEAE						
<i>Stackhousia muricata</i> ssp. "Perennial" ⁶⁶ (W.R.Barker 364+)	yellow candles	+ ⁶⁶			+	
STERCULIACEAE						
<i>Commersonia tarei</i>	trailing commersonia	+				
<i>Lasiopetalum behrii</i>	pink velvet-bush	+	+	+	+	
<i>Lasiopetalum discolor</i>	coast velvet-bush		+	+		
<i>Rulingia craurophylla</i>		+				
STYLIIDIACEAE						
<i>Levenhookia dubia</i>	hairy stylewort	+				
THYMELEACEAE						
<i>Pimelea curviflora</i> var. <i>sericea</i>	curved riceflower		+		+	
<i>Pimelea micrantha</i>	silky riceflower	+ ⁶⁷			+	
<i>Pimelea microcephala</i> ssp. <i>microcephala</i>	shrubby riceflower		+	+	+	
<i>Pimelea imbricata</i> ssp. <i>petaea</i>		+ ⁶⁸			+	
<i>Pimelea petrophila</i>	rock riceflower		+	+	+
