Horehound

Marrubium vulgare

AIM: To destroy plants and prevent any further seed set.

Control Options	Chemical	Rate	Comments
Spot Spray	Amine 625	150ml/100L	
	Dicamba 500	80ml/100L	
	Grazon [®] DS	350ml/100L	Pre-flowering
Boom Spray	MCPA 500	2.1l/ha	Seedling stage only
Manual Removal	Grub individual plants, ensuring the complete removal of the root system from the soil. Plough infested area, ensuring plants are turned over with roots completely removed from the soil. Follow up control on any new growth.		
Notes	Herbicide treatments of Horehound are more effective when applied to young plants or to the fresh growth of old plants. Slashing or burning old growth and then treating the fresh growth is useful in increasing herbicide control of older plants.		

Always follow safe use instructions on herbicide labels. Refer to product label for full conditions of use and application instructions.

These options have been compiled from herbicide manufacturer labels or previous experience and the South Australian Murray-Darling Basin Natural Resources Management Board (SA MDB NRM Board) holds no responsibility for their effectiveness. Permits may be required for any off label use.

For specific advice on the use of these herbicides and options please contact the SA MDB NRM Board Officers. In certain circumstances these options may not be suitable.
