The Authors

The following people were responsible for writing this book. Their names appear on the contents pages against their respective chapters.

- A. Aeuckens : B.A. History consultant.  
J. Coupland : B.A.(Hons.) History consultant.  
G. Drew : M.Sc. Dip.Ed. Information officer, South  
Australian Department of Mines and Energy.  
A.L. Green : B.Arch. Architectural Consultant.  
B.Y. Harper : B.A.(Hons.) M.T.P., Senior Lecturer in Planning,  
S.A. Institute of Technology.  
D. Jordan : B.A.(Hons.) Ph.D. (Melb.) History consultant.  
P. Perkins : A.A.(Dip.) A.R.I.B.A., F.R.S.A., Architectural  
consultant.  
G. Young : F.R.A.I.A., A.R.I.B.A., Senior Lecturer in  
Architecture, S.A.I.T.

Map 1 Location of District Council of Onkaparinga in relation to Adelaide

### Acknowledgements

We are very grateful for the help given to us by the residents and building owners living in the Onkaparinga District Council who allowed us access to their properties for photographic and measured surveys.

The Chairman and Council of the Onkaparinga district and its officers, Mr. David Seaman District Clerk, Mr. Roger Sweetman his deputy and Mr. Brian Irvine the Council's Planner have strongly supported the project from its inception.

The following are some of the persons and government instrumentalities who have provided us with information: Mr. F.A. Aubury, Mrs. L. Beckwith, Mr. and Mrs. H. Boerth, Carol and Roger Brockhoff, Mrs. Cray, Mrs. D. Dohnt, Mr. E.L. Filsell, Mr. L.W. Grasby, Dock Harris, Mr. J. Harrison, Mr. M.F. Ide, Mr. I. Jaggard, Alex Johnston, Mr. P.D. Karger, Mr. B. Kemp, Mr. V. Kerber, Rev. Little, Mr. McEwin, Mr. J. Marshall, Mr. and Mrs. Mattner, Mrs. P. Mossop, Fred Murray, Mr. Brian O'Leary, Mr. D. Patton, Mr. and Mrs. G. Perrin, Mr. Laurie Spoehr, Mr. T.G. Teakle, Mr. A.M. Weidenhofer, Mr. Samuel Whyatt. South Australian Department of Environment and Planning (Heritage Conservation Branch), South Australian Department of Mines and Energy.

The maps were prepared by Annette Green, and most of the measured drawings are by Joe Timpani.

The following students of Architecture from the South Australian Institute of Technology, also contributed to the project: H. Angas, J. Balnaves, J. Evangelista, E. Foundas, J. Galdies, J. Heaton, H. Makins, S. Nikias, J. Petrie, C. Sutcliffe, T. Veidt.

Photographic Illustrations were prepared by Mrs. M.I. Simmonds, of the Graphic Services Department, South Australian Institute of Technology. The draft reports were typed by secretarial staff of the Onkaparinga District Council and the secretarial staff of the School of the Built Environment and Administrative Services, S.A.I.T.

The final report was set by Mrs. J. Grossman.

Map 2 District Council of Onkaparinga

### Preface

The Onkaparinga District Council Heritage Survey is the fifth of its kind undertaken by the Centre.\* Work on the first phase of the survey commenced late in 1982 with the aid of a grant from the South Australian Department of Environment and Planning. Annely Aeuckens, the Centre's consultant historian assisted by Jane Coupland, historian, carried out extensive studies of the area's early history and the development of its agricultural industry. In 1983 Annette Green, the Centre's consultant architectural historian, conducted a heritage survey of the area and working in conjunction with Annely Aeuckens produced a list of historical precincts and buildings in the district on behalf of the South Australian Heritage Branch.

The second phase of the project commenced early in 1984 and was funded by grants from the Commonwealth and the Onkaparinga District Council. Further detailed historical research was carried out by Dr. Deborah Jordan, a consultant historian. Township and landscape studies were also undertaken by Peter Perkins, a consultant architect, in liaison with Brian Harper, Senior Lecturer in Planning, School of Built Environment, South Australian Institute of Technology.

To complete the project detailed studies of selected buildings were carried out in 1985 by Joe Timpani, a graduate architect from the School of Architecture at the South Australian Institute of Technology.

Gordon Young

\* These were the Barossa Survey 1976-77, the Hahndorf Survey 1978-80, the Lobethal Survey 1980-82, and the Birdwood Survey 1982-84.

## Introduction

Gordon Young

'My Dear Sir - I am just returned from the Bush, having been absent eight days - the greater portion of which have been spent in examining the sources of the Angas (i.e. Onkaparinga), and forming the lines of its boundaries; it affords me much pleasure in being able to state that this beautiful survey exceeds my expectations...etc.'

This was the beginning of a report written by William Beavis Randell, stock manager of the South Australian Company to David McLaren, the Company's Colonial Manager on February 9th 1839. (See Appendix A, p.207). The area he was describing is now the Onkaparinga District Council. Just prior to the time this letter was written, on January 24th 1839, McLaren had claimed a Special Survey in the region known as the Sources of the Angas River. From an area of 16250 acres McLaren purchased 8000 acres to which he later added an extra 1000 acres. On the very same day the Company also claimed half of another Special Survey which was taken out south of the sources of the Angas River by Matthew Smillie, a Scottish lawyer. Thus, with the exception of the first Special Survey at Mount Barker which had previously been taken out by W.H. Dutton and his partners, the Company virtually at one stroke had acquired the whole of the arable land in the Onkaparinga Valley, an area in which the townships of Woodside, Oakbank and Balhannah were eventually established.

For at least a decade afterwards the Company used this fertile valley for pasturing its stocks of sheep, cattle and horses. However, by the late 1840s, with the occurrence of closer agricultural settlement in the Adelaide Hills the Company began to lease its land holdings out to tenant farmers on either 7 or 14 year leases. Such comparatively short-term leases subsequently retarded the development of suitable husbandry in the valley and led to considerable dissatisfaction between the tenants and the company through the rest of the 19th century. (See p.26). It was mainly the enterprise of the smaller landowners who settled in the valley in this period which stimulated the development of permanent settlements. Foremost amongst these early pioneers were the Johnston family, Scottish immigrants from Glasgow, who settled in the Oakbank district in 1840. At first they were farmers, but soon became noted for their brewing skills. The capital they gained from this lucrative activity was not only employed in erecting a chain of hotels throughout the Adelaide Hills but also in creating the townships of Oakbank and Woodside.

Other Scots had already arrived in the district in 1839. They included John Brakenridge and his family, who came from Argyle and who along with his son, were employed as shepherds for the South Australian Company. Another was James Turnbull Thomson of Dundee who arrived at Holdfast Bay in August 1839, and who by December 21st was advertising a 'New township near Mt. Barker called Balhannah', where by the following March (1840) he had opened the first public house in the Onkaparinga

district. At the same time Matthew Smillie was laying out the nearby township of Nairne, where residential allotments were first offered to the public in January 1840. (Nairne was later incorporated into the Mt. Barker District Council). Other Scottish settlers moved into the area between the present day Nairne and Woodside. Amongst them were the Murdoch family who took up a large section of land in 1840, which they called 'Craigdarroch'. Later the district around became known as Murdoch's Hill.

Along with the arrival of these early Scottish settlers were those of east Germans from the Prussian provinces of Brandenburg, Poznan and Silesia. These were groups of farmers and rural artisans who first settled on a portion of Duttons', Mt. Barker survey and named their German village Hahndorf, in honour of Captain Hahn, the Danish captain of the Zebra, the ship which brought them to the new colony.

In 1842 another group of German settlers who arrived on the Dutch vessel the Skjold, settled on two sections of land in the Sources of the Onkaparinga Special Survey, a spot they later named Lobethal (Valley of Praise). During the rest of the decade and well into the 1850s other groups of Germans arrived and settled in areas adjoining the new township (viz. Neudorf, Schoenthal, and the Tabor Valley).

Further afield another group settled at Springhead, which lay near to Mt. Torrens whilst in the South of the district other German settlers moved from Hahndorf and took up land in the surrounding areas, at Paechtown to the west and Grünthal to the east (the latter was renamed Verdun at the end of World War 1).

Scattered amongst these groups of German and Scottish settlers were others from English and Irish stock. Two significant English families who settled near Mount Charles were the Dunn's and the Newmans. These were the people from the West Country (Devon and Somerset) who pursued their traditional rural pursuits of sheep rearing and wheat growing. The gold rushes to Victoria which began in the early 1850s created a huge demand for both flour and wheat and gave both of these families the capital they needed to expand their properties and finally allowed Charles Dunn to create the new township of 'Charlestown' (Charleston) which was surveyed and subdivided in September 1857.

To the west of the Onkaparinga District Council area are the steep slopes of the Mount Lofty Ranges, an area known to early settlers as the Tiers. Groups of gold miners and woodcutters moved into it soon after settlement began, the latter were attracted by the copious stands of Stringybark and Blackwood, building timbers required by a rapidly expanding Adelaide. When the hillsides had been cleared many of the woodcutters remained with their families and turned to market gardening and orcharding.

By the mid-1850s a settled farming community in the upper Onkaparinga Valley was rearing stock, growing wheat and practising a variety of small-scale mixed farming methods which had been carried on for centuries by their European forbears. German settlers in particular continued on with these ancient

rural pursuits. Their small farms were a hive of industry, where apart from growing wheat as a cash crop they grew barley, oats, rye and peas, along with a variety of other vegetables and soft fruits. Apart from their cattle they had goats and pigs providing them with a variety of meat and dairy products, and wine was cultivated for both family and liturgical needs.

Closer rural settlement of the valley stimulated the growth of secondary industries such as brewing and milling. These enterprises were located in the small townships that began to appear (See Table 2 p.153). Both Oakbank and Lobethal had breweries, the former had the Johnsons' Brewery whilst the latter boasted an early brewery built by F.W. Kleinschmidt in 1851. The sparkling qualities of the abundant springs in the valley contributed to the development of the industry, which later stimulated hop-growing around Lobethal by the Kleinschmidt and Mueller families.

In 1869 F.W. Kleinschmidt closed his brewery and sold off its equipment to the Johnston brothers at Oakbank. He then commenced in collaboration with the Kummick brothers the Lobethal Tweed Factory. At first this company was located in Victoria Street, Hahndorf but in 1872 its hand-loom were transferred to Kleinschmidt's brewery buildings at Lobethal. After years of only sporadic success the company was sold to the South Australian Woollen Factory Company in 1887. With the assistance of the State Government and under the guidance of its astute new Scottish manager Robert Redpath, this company soon began to prosper.

Lobethal's social and economic background changed rapidly in the latter part of the 19th century. From being a largely German settlement it became one of the state's most important industrial townships with a mixture of skilled British artisans from the north of England and Scotland added to its already settled population of German farmers and rural artisans. Amongst the newcomers was Newsome Burnley, a Yorkshire woollen worker who later became a store-keeper and then a well-known jam manufacturer. Another Yorkshireman F.A. Pulleine introduced fruit-drying to the town in the 1880s, an industry which was also successfully carried out well into this century by the Schubert family of Lobethal.

In the 1870s the failure of wheat growing in the Adelaide Hills caused by the development of rust and other diseases, lead many farmers to leave the Onkaparinga area and seek larger farms in the expanding rural districts of the mid-north and south-east of the State, or to diversify their farming operations. Thus by the late 1880s dairying, orcharding, hop-growing and wattle-bark stripping were some of the mixed agricultural pursuits carried on. These changes influenced the types of secondary industries which developed in the valley townships. The last decade of the 19th century also saw the introduction of improved methods of butter and cream production and fruit preserving techniques, (viz. mechanized milk separators and refrigeration equipment). Another important fillip to the growing economy of the district was the discovery of copper at Balhannah and Grünthal (Verdun) between 1869 and 1876. Small deposits of alluvial gold had been found at Forest

Range and near Balhannah between 1849 and the late 1860s but the discovery of larger deposits of the mineral near Woodside in the 1880s led to the beginning of extensive mining operations. Each of these discoveries attracted miners and others into the district and supported the development of the adjoining townships. However, these miniature mining booms soon collapsed, due either to the difficulties of the mining operations (e.g. high water tables) or the collapse of mineral prices on world markets.

Woodside, which is approximately at the centre of gravity of the Onkaparinga District Council began to develop as a commercial centre in the mid-to-late 1850s. It also became the centre of Government with the establishment of the Council Offices in 1853, and the building of a Police Station and Court House in the following year. The larger present-day Court House and Cell Block were built in 1859. Further expansion of the town took place in 1864 (Woodside extension) and 1882 (North Woodside extension) the latter as a response to the mining booms of the era.

Oakbank was subdivided in 1855 and developed as a company town by the Johnston brothers. Their town layout was somewhat romantically portrayed in a water colour rendered plan of Oakbank prepared by the architect R.R. Page in 1864 (Fig.27, p.97). Building development took place slowly and at first was concentrated in the northern portion of the township around the Oakbank Brewery. In 1880 Henry Pike and his son Walter and son-in-law Ernest Albert Beasley established a second brewery in the southern portion of the township and called it the Dorset Brewery. This soon became a thriving concern and stimulated further building development in the township.

Balhannah, the first township to be subdivided in the Onkaparinga district never developed in the way James Thomson imagined it would. The allotments he provided in his plan of 1840 proved to be too small and were later re-subdivided to form larger holdings. In 1857 James Blyth laid out another subdivision on the west side of the Main Road and in the following year Osmond Gillies subdivided land adjoining on the north side of the road. These small settlements were known as Blythtown and Gilleston. This scattered village form remained until as late as 1928 when a further subdivision of farmland to the south of the earlier ones created the more cohesive framework of present-day Balhannah. (See Fig.47, p.164). The arrival of the railway link from Adelaide and its location on the main Adelaide to Melbourne line meant that for many years Balhannah was an important railway centre (other townships in the Onkaparinga were only reached by rail when the Balhannah-Mt. Pleasant railway line was opened in 1918).

The early decades of this century saw Balhannah becoming an important centre for the fruit-growing industry. In 1908 the Wicks family established their large nursery to the north of the township and later in 1914 they were instrumental along with the Filsell family in building the first private cold store specifically designed for fruit in Australia. It was the expansion of the fruit growing industry in the Balhannah/Forest Range district which led to the creation of the new township of

Lenswood at the end of the First World War. (Lens, a French manufacturing town in the Pas-de-Calais region, was a major battle zone throughout the war).

The shortage of man-power on the farms during the war led to an increase in the use of mechanised transport and farm machinery. In the dairy industry milking machines were introduced on the farms and in the dairy factories mechanical agitation replaced hand stirring. The delivery of milk from the farms to the factories was changed from individual delivery to delivery by trucks organised by farmers' co-operatives. Later refrigerated tankers were introduced to collect the milk.

The economic effects of the Great Depression on the Onkaparinga district does not appear to have been as drastic as those felt in metropolitan Adelaide. Although the fruit growing industry suffered a set-back in the depression's early years, it had regained its markets and become one of the most important rural industries by the late 30s. Likewise the dairy industry and the valleys two dairy factories increased output enormously in the inter-war period. The local economy was again stimulated by a resurgence of gold mining in the 1930s, an event promoted by the desperate economic times and largely related to the mineral fossicking carried on by the unemployed of metropolitan Adelaide. Lobethal's woollen mills had expanded their activities during the First World War (viz. a large scale production of blankets) and by the late 1920s when the Onkaparinga Woollen Company was formed had become the pre-eminent industry of the district.

The establishment by the Commonwealth Government of the Woodside army camp in 1926-27 brought another influx of population to the district. This increased considerably with the advent of the Second World War in 1939 and the large-scale training of army personnel which took place here up until 1945. After the war, in the late 1940s, the camp became the first home in Australia for hundreds of post-war immigrants, many of whom found work in the booming woollen industry of Lobethal.

The forty-one years since the last Great War have seen immense changes taking place in the expansion and movement of population in all Australian states. These have had their effect on the Onkaparinga district. The consolidation of secondary industries within the more highly populated areas aided by improved road transportation has seen the closure of the district's dairy factories and the transfer of their operations to metropolitan Adelaide. A similar fate almost overtook the Onkaparinga Woollen Mills after the Company was taken over by 'outside' interests in the mid-1970s.

The advent of the European Common Market and the virtual disappearance of the traditional United Kingdom market almost dealt a body-blow to the area's fruit-growing industry. However, by exploring new home and overseas markets the industry was re-established by the mid-1980s.

Although many of the State's country towns lost population to the metropolitan area between the early 1950s to the early 1970s there has always been a steady growth during this period in the population of the townships of the Onkaparinga District

Council. This growth not only reflects a recent Australian trend towards seeking a more rural life-style (aided by widespread car ownership and improved road networks), but it also shows the continuing attraction of the area's productive agricultural capacity.

This report takes up many of the historical themes which have been mentioned above. Starting with aspects of the colonization of South Australia and the theories of land alienation which were adopted (i.e. the Wakefield system) it proceeds to a discussion of the discovery and settlement of the Onkaparinga district and its early agricultural development. The consolidation of rural activities and the appearance of large-scale dairying and fruit growing are studied in detail as is the impact and importance of the brewing and mining industries. (N.B: the importance of the woollen industry is dealt with in Lobethal - Valley of Praise.) With the advent of settled rural communities the development of religious and educational institutions became apparent and these are given their due prominence in the report. The centres for urbanization of the Onkaparinga district and the types of pioneer buildings and building techniques employed are also described. Finally as a tribute to the area's great physical beauty, the work of Sir Hans Heysen and his paintings of the Onkaparinga are included as an appropriate postscript to the report.

Gordon Young  
December 1986.

## CHAPTER 1

Physical Environment

Brian Harper

The Onkaparinga District Council area is located in a relatively broad valley portion of the upper reaches of the Onkaparinga River - a river which is older than the Mount Lofty Ranges through which it now flows westwards to the sea. Physically the area is bowl-shaped, but with a higher rim in the west than in the east, and more open to the north than it is to the south. Located some 22 kilometres from Adelaide, the council district covers 22000 hectares and stretches some 20 kilometres from north to south and 15 kilometres from west to east, but the orientation of the district, flanking either side of the Onkaparinga, is approximately north-east to south-west.

The whole area contains three reasonably well-defined sub-regions (map 3) of which the central 'Valley Region' is dominant and contains the four largest urban centres of the bowl. To the north-west is the 'Western Region' which merges into the Cudlee Creek area, and to the south-east is the 'Eastern Region' which physically continues to Nairne and Mt. Barker beyond the district boundaries.

The Valley Region generally has an elevation less than 450 metres above sea-level. Deltaic soils overlay hard quartsize rocks, but the soils are usually deep, loamy and fertile and these were significant in attracting early settlement. Much of the region has been cleared of its original vegetation and is used for market garden crops and general farming. It is within this region, close to the water supply of the Onkaparinga River itself, that major settlement centres evolved and have now partly urbanized the region - Lobethal, Woodside, Oakbank and Balhannah between them contain half the population of the whole district.

The Western Region consists of sloping hills up to 600 metres above sea-level. Here the soils tend to be strongly leached and acidic and generally shallow as they lay on hard quartzites and other impervious rock materials. The steeper slopes of the region still retain native vegetation and where this has been cleared it has been replaced with either pine forests or orchards, and on the middle slopes with vines. Orchard crops vary from cherries on the upper slopes, to apples, and to plums on the lower slopes.

The Eastern Region is a significant contrast to the Western Region. It contains gently undulating topography with some high points up to 500 metres. The eastern slopes are covered in sedimentary soils such as Rendzinas and Terra Rossa, which overlay sedimentary and metamorphosed rocks often associated with limestone. This combination, as elsewhere in the Adelaide region, has been used for farming purposes. Many of the higher slopes have been cleared but there are still patches of native trees particularly in areas associated with dairying and grazing.

Hence, within this bowl-shaped district, a variety of land uses has developed in response to changes in aspect, soils and micro-climate, and these are depicted in the accompanying cross-section diagram of the area.

CHAPTER 2  
The Colonization of South Australia:  
Theoretical Aspects and Land Alienation

Jane Coupland

The manner in which South Australia came to be colonized was largely determined by the ideas and principles expounded by Edward Gibbon Wakefield. His ideas were a reflection of the social political and economic thoughts current in English Society during the last quarter of the 18th Century and the beginning of the 19th Century. During this period, English society underwent the most profound socio-economic and political transformation ever experienced in the country's history. The Industrial Revolution accelerated after 1750 and the transformation of agriculture continued, such that a very new society emerged, one based on commercial agriculture and industrial production. In sociological terms the working population was transformed from a class of small farmers and farm labourers into a class of industrial wage labourers. In economic terms national production was geared for the export of manufactured goods. And in political terms the aristocratic influence in Parliament declined as the middle class emerged as the holders of economic and political power.

British colonial policy changed considerably during this period. The Old British Empire, which was developed under the Mercantile era, collapsed with the decolonization of the Americas.<sup>1</sup> The establishment of colonies in Africa, Asia and the Antipodes was part of a new Anglo-Saxon Empire and was built on very different principles to those which underlay the Old Empire. Thus, a thorough transformation of views on the status, purpose and value of colonial possessions had taken place.

The new society had given rise to new thoughts and ideals on first the economy; its functioning and the nature of growth, and secondly society and politics; the structure of the new social and political order and the nature and role of the individual in that society. A consideration of new developments in theories of economics, society and politics is essential for an understanding of E.G. Wakefield and his contemporaries and the context of their arguments.

With the publication in 1776 of Adam Smith's *The Wealth of Nations* a new tradition in economic thought was begun. This period is commonly known as the Classical period in economic thought. It was the thoughts, concepts and ideas of these new economists that influenced the writers and policy makers of the late 18th and early 19th centuries, among them was E.G. Wakefield.<sup>2</sup>

The Classical economic's concern with economic growth in the long term lead them to study the origin, nature and magnitude of the surplus derived from production.<sup>3</sup> It has long been recognised that the economic surplus was the key to economic expansion, however, Classical economists, such as Adam Smith, constructed a series of arguments concerning how the

surplus could best be utilised. It was in these arguments that they refuted the ideas and concepts of the Mercantile age.

Adam Smith articulated the concept of 'the division of labour'. For Smith, the division of labour was of great importance to economic growth. The specialisation of the labour force brought with it the '...greatest improvement in the productive powers of labour...' <sup>4</sup> This subdivision of tasks was possible only in a society in which production for exchange took place. An agricultural community exchanged subsistence goods and materials for manufactured goods with the local market. Such exchange rests upon and further reinforces the subdivision of jobs. Further division of labour is limited by the extent of the market and therefore it follows that measures which widen the market act also to enhance the division of labour and thus to further improve the productive powers of that labour. It came to be viewed that foreign trade was a means of expanding the market and hence was seen as a means of leading to the further specialisation of labour and therefore also to the greater improvement in the productive powers of that labour. Foreign trade allows a country to overcome the narrowness of the home market and therefore trade gave much greater opportunity for the operation of the principle of the division of labour.

Exchange was the key to economic expansion and growth over time. The free, unhindered exchange of goods was called for by the Classical economists. This led to the Free Trade cause. It was argued that political barriers, customs and tariffs, acted as barriers to the flow of goods, this limited exchange which in turn limited the division of labour and hence restrained growth and improvement. Political frontiers, tariffs and regulations were characteristics of the Mercantile age. The supporters of Free Trade opposed these institutional arrangements and advocated the free flow of men and goods. The Free Trade cause decisively affected English opinions on colonial possessions by shifting emphasis from territorial possessions and empire to the free exchange of goods on an international scale.

Also characteristic of the Mercantile age was the role which Government played in trade and economic affairs in general. This too was negated by the Classical economists on the grounds that economic affairs were governed by laws ascertainable by man but which lay beyond his direct control. Government had no role to play in the determination of economic affairs. Indeed Government was to contain itself to defense, justice, law and order, leaving economic affairs to the market. Adam Smith argued that any activity which interfered with the market whether initiated by Governments, (i.e. restrictions of trade), or by private interests, (i.e. monopolies), were to be condemned. Furthermore, Smith argued that when an individual acted to further his own interests he also, though unconsciously, acted in the interest of society. The individual would advance his capital in such a manner as would generate the greatest income in return. The total income accruing to the social classes which made up society (Landlords, Capitalists and Labourers) would thus be increased. Economic improvement

could best be enhanced by the liberalising of the individual.

In summary then, the Classical economists considered that the productive powers of labour could best be enhanced by the continual specialisation of labour through trade. Trade beyond the national market was a stimulus to economic expansion. However such trade had to be organised on the basis of the free flow of goods and men, where the market was free of interference from either Government or private interests.

#### Wakefield's theories of colonization

Wakefield's work on the colonization of South Australia was based on the argument that colonies served to extend international trade and thus enhance economic expansion and development.

Trade beyond the national frontier was dependent on exchange, not on dominion.<sup>5</sup>

Trade beyond the domestic market was seen as the crucial factor in bringing about economic development, and colonies were seen as an important way in which this trade could be expanded. Thus, colonies were seen not simply as dominions but as economies with which the colonizing countries could exchange goods. So, the new policy towards colonies, which was suggested by the works of the Classical economists and adopted by the British Government, was that colonies should form part of an international system of trade.

Adam Smith had pointed out that the colonization of the Americas had stimulated European trade and industry; Wakefield argued that the colonization of South Australia would greatly enhance the expansion of the British economy. He stated that '...colonies are of value simply because they enlarge the productive territory of the nation that plants them...' He stipulated that colonization would enhance trade and industry in England and lead to prosperity in the colony only if capital as well as labour was transferred from England to the new colony. Wakefield argued that in England there was an insufficient utilization of capital, which had caused a surplus of capital. The colonization of South Australia was one way by which the field for the utilization of capital could be expanded. In the new colony, capital could be employed in the purchase of fertile land and in trade with the Mother country. By enlarging the field for the utilization of capital through colonization, then economic expansion and development would be enhanced both in England and in the new colony.

Wakefield's argument challenged the premises of British colonial policy, which was popularly known as the 'shovelling out of paupers'. This policy was based on the assumption that pauperism was caused by excess labour. All that was required to eliminate pauperism was the transference of the excess labour to the colonies. Wakefield challenged this by arguing that the insufficient utilization of capital was a major cause of pauperism and that to overcome pauperism both capital and labour had to be transferred to the colonies. Wakefield's ideas and arguments on colonization were collectively referred to as the policy of 'systematic colonization'.<sup>6</sup>

Wakefield set out other principles regarding the colonization of the colony of South Australia. They are as follows:

1. There should be established in the new colony a proportion between labour and land as would render labour plentiful and not dear.<sup>7</sup>
2. To establish and maintain this proportion between land and labour, a sufficiently high price for land had to be charged. This would require labourers to work for wages for a considerable period of time<sup>8</sup> rather than purchase land and become landowners (which would result if the price of land were too low). A 'sufficient' price would thus maintain a plentiful supply of labour and would restrict the size of the landowning class, thereby maintaining the appropriate proportion between labour and land. Under such conditions capitalists would have the confidence to invest and labourers would emigrate, since remunerative work awaited them<sup>9</sup>. This would lead to the most profitable tenure of the land.
3. The revenue derived from the sale of land ought to be devoted to the emigration of labour, which once arrived would work the land previously purchased. Wakefield argued that according to the extent of land sold there would be an increase of demand for labour to cultivate it. According to the extent of land sold there would amount a sum of money with which the colony could fund the emigration of the necessary labour.<sup>10</sup>
4. The sale of land should be at a uniform price for all situations and should not be sold by auction. This would ensure liberty of appropriation.

#### Land Alienation

Under the auspices of the South Australian Association, a bill for the foundation of the Province of South Australia and its colonization was introduced into the British Parliament. The bill became an Act in 1834. Incorporated into the Act were the main principles of the Wakefield scheme for colonization. The Act required that the proceeds from the sale of crown land be used to procure labour from within the United Kingdom, that land sales be uniform in nature, that land not be selected prior to survey and that land be sold by tender and not by auction. To implement this system of colonization a Board of Colonization Commissioners was to be appointed.

In 1835 a Board of Colonization Commissioners, headed by Colonel Torrens was appointed. Before the Act could come into operation the Colonization Commissioners were required to sell £35,000 worth of land and to deposit £20,000 of that sum into the British Treasury. However investors were reluctant to purchase land in a new colony which was not actually founded and which did not have an established Government, and so the Colonization Commissioners could not immediately fulfil their task. At that point, one of the Commissioners, Mr. George Fife Angas, proposed that a joint stock company be formed with the purpose of purchasing the remaining amount of land which would enable the Commissioner's task to be fulfilled, thereby guaranteeing the colonization of South Australia. To attract

additional purchasers of land the price per acre of land was reduced from £1 to 12s. per acre. By the beginning of 1836 the South Australian Company was formed with a capital of £200,000 with Mr. Angas as Chairman of Directors.<sup>11</sup> The Company was formed for the purpose of purchasing and renting land in the colony, improving and cultivating land, erecting wharves, warehouses and other buildings, and constructing dwelling houses and laying out farms for letting to the colonists.<sup>12</sup> Immediately the Company purchased 102 lots of land, at the reduced price, each consisting of a town acre and a country section (134 acres). In addition the company was entitled to rent 220,160 acres of land for pasturage. The company was involved in whaling, fishing, sheep, farming, shipping, banking and general commerce.

Once the required amount of land had been sold, the foundation Act of 1834 came into force and in 1835 settlers began arriving in the colony, even though Proclamation was not to take place until 1836.

Many of the first settlers who penetrated the country-side of the colony did so as employees of the South Australian Company. Usually, trade follows the flag, at least that was the respected maxim of the British Empire, as D. Whitelock points out. But, 'the founders of Adelaide...were such unabashed commercialists that trade actually preceded the flag...'<sup>13</sup> Whilst there was much activity in the colony prior to Proclamation, little in the way of agriculture was undertaken. This situation had arisen from the ruling that land could not be selected by purchasers before it had been surveyed. Since the settlers had begun arriving in the colony before the land had been surveyed, they were forced to remain for many years in the town of Adelaide while awaiting the land surveys to be completed. Agriculture in most country areas, including the Onkaparinga District could not be undertaken during this period. It was not until 1839 that land became available.

The survey delays did not have the same effect on the livestock industry as it had on agriculture and rural settlement in general. As A.J. Perkins notes, flocks and herds could be tended independently of the ownership or the lease of the land.<sup>14</sup> Thus, during the period before the land surveys were completed and settlers could begin to occupy the land, there existed a group of squatters<sup>15</sup> who did not pay rent of any kind, yet were able to graze their flocks and herds over vast areas of land which they did not own.<sup>16</sup> The squatters soon amassed great personal wealth and with it prestige and social status. They rapidly became the aristocracy of the colony.<sup>17</sup> The emergence and prosperity of the squatters reveals how the Wakefield scheme - which attempted to establish a class of small farmers in a setting absent of a powerful and wealthy landed aristocracy - failed to achieve one of its prime objectives. Had the surveys been carried to completion more quickly the Wakefield scheme may have been more successful in the short term.

A stated aim of the Wakefield scheme was to prevent the accumulation, by individuals, of large estates, and the

dispersal of such estates throughout the colony. The Special Surveys however made possible the large estate. The clause added to the land regulations in 1835 which made possible the Special Survey was worded as follows:

Anyone who shall hereafter pay in advance to the proper officer, either in England or in the Colony, the price of 4,000 acres of land, or upwards, shall have a right for every 4,000 acres thus paid for, to call on the Colonial Commissioner to direct the survey of any compact district within the Colony of an extent not exceeding 15,000 acres; and within 14 days after the publication of such surveys at the Lands Office, to select his land from any part of such district before any other applicant.<sup>18</sup>

By means of the Special Survey an individual could acquire 4,000 acres, neatly divided into 50 sections of 80 acres each. There seems to have been no upper limit as to the amount of land that could be acquired by these means. However, most of those who acquired land under the Special Survey generally claimed properties of 4,000 and 5,000 acres. George Fife Angas appears to have been an exception, since on his behalf Mr. Flaxman purchased five Special Surveys, each being a little over 7,000 acres in size.<sup>19</sup> The South Australian Company also owned vast tracks of land in the colony. In the Onkaparinga district alone they purchased two Special Surveys, thereby becoming the largest landowners. It can be stated therefore that the introduction of the Special Survey seriously compromised the principles of Wakefield's scheme. However as grazing gave way to a pattern of diversified agriculture so the size of each holding sometimes decreased to 80 acres or less. Wakefield's plan was thus partly fulfilled in the longer term.

In January 1839 the first Special Survey was taken out and by August of the same year no less than twenty eight Special Surveys had been purchased in various localities in the colony. Most of the best land in the Onkaparinga district was alienated by means of the Special Survey (map 4). The first was acquired by W.H. Dutton, J. Finniss and D. Macfarlane in January, 1839 and was recorded by the South Australian Gazette Register as follows:

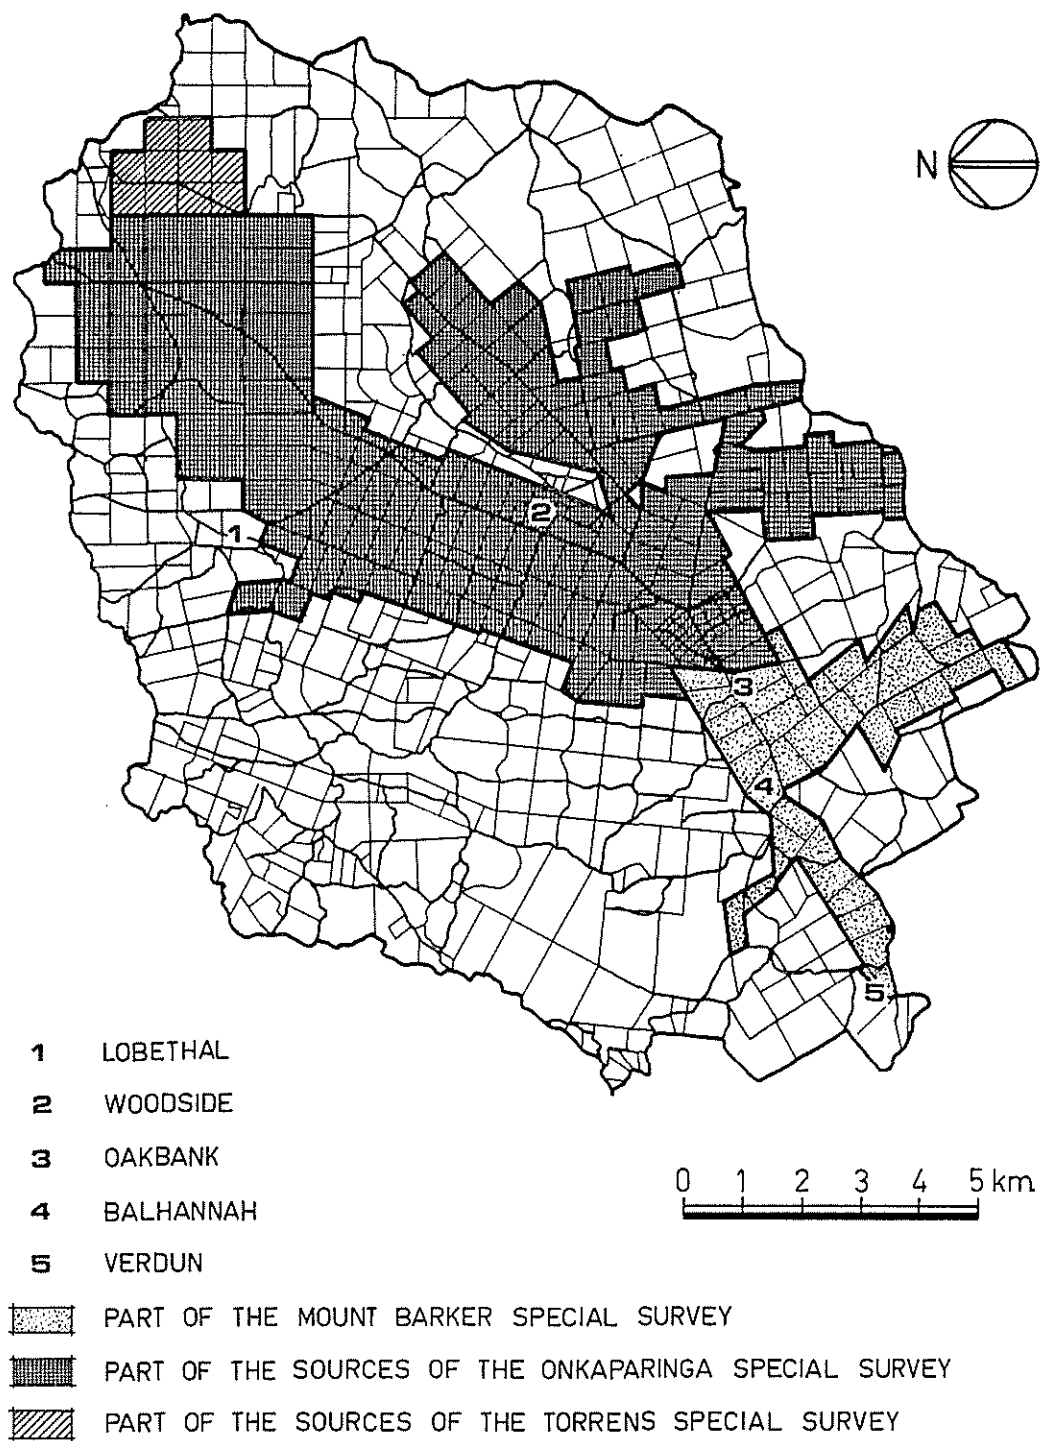

Notice is hereby given that the sum of £4,000 having been deposited with the Colonial Treasurer by William Hampden Dutton, late of Sydney, but now of Adelaide, a Special Survey of 15,000 acres in the District of Mount Barker has been ordered by His Excellency, the Resident Commissioner to be commenced immediately in order that 4,000 acres may be selected therefrom by Mr. Dutton...<sup>20</sup>

The area in which this Special Survey was taken out, had previously been used as a cattle station by J.B. Hack and Finniss.<sup>21</sup> Apparently, Hack who had squatted on the land had been too slow in declaring ownership of the area, which allowed W.H. Dutton to declare the area as the site for his Special Survey. Another party interested in the same area was the South Australian Company. Its manager at the time, David McLaren, was also too slow to take out a survey in the area.

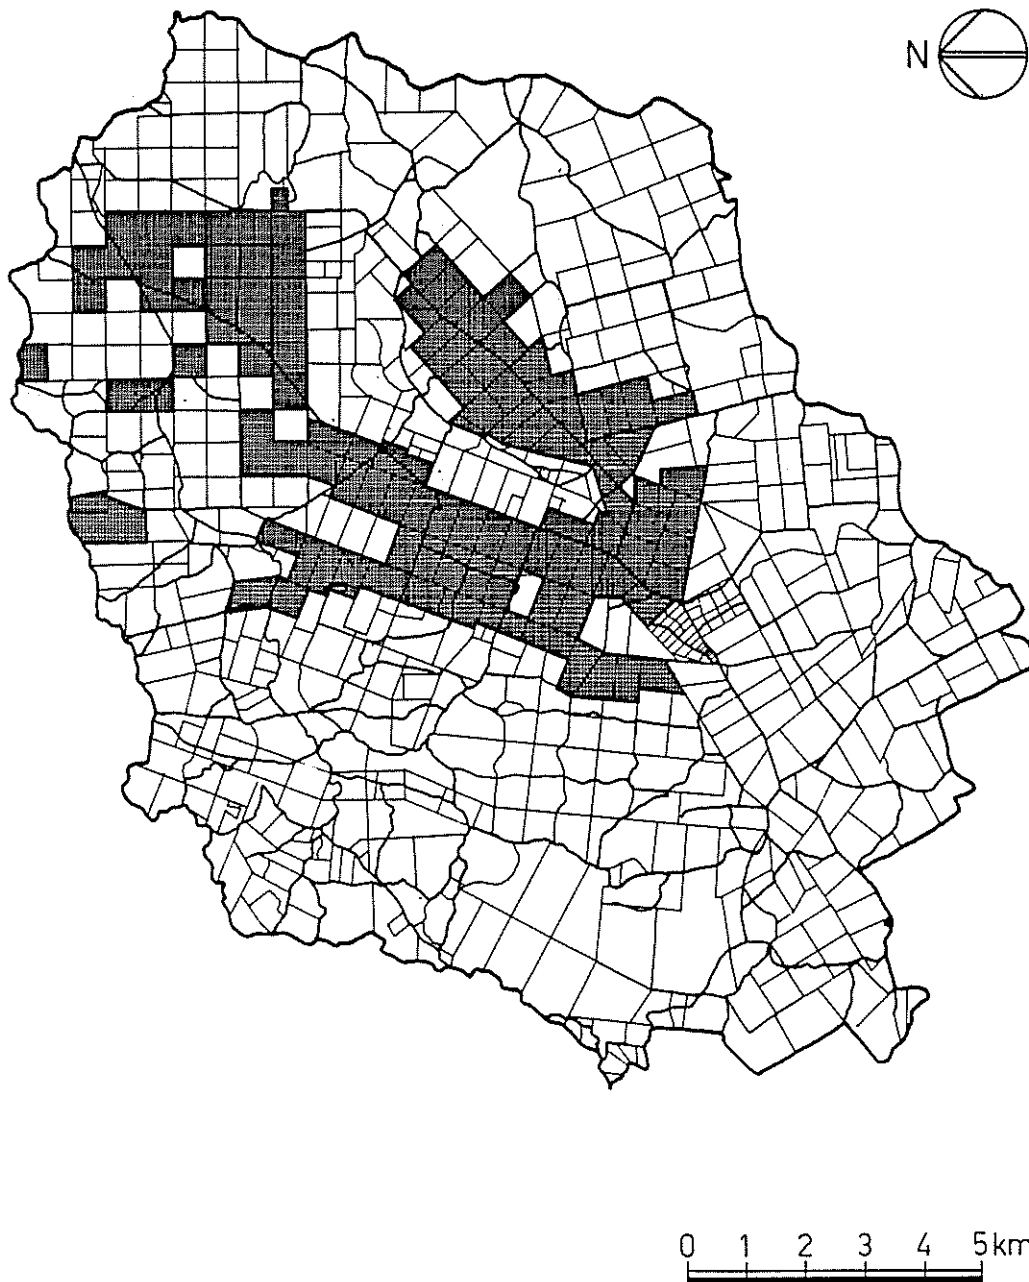

Instead, the Company took up a survey in the region known as the Sources of the Angas River - this in fact being the Onkaparinga River and not the Angas River. From an area of 15,000 acres they purchased initially 4,000 acres and almost immediately increased this to 9,000 acres.<sup>22</sup> This purchase, it appears, was a result of a directive issued by the London based directors of the Company, and was contrary to the stated objectives of the Company. Initially the Company stated that its aim was to purchase as much town land as possible.<sup>23</sup> By taking out some 9,000 acres in the Special Survey of the Sources of the Angas River the Company was clearly departing from its stated objectives and embarking on a new policy toward the purchasing of land. Later, the Company together with M. Smillie took out a Special Survey south of the Sources of the Angas River and to the west of Dutton's survey at Mount Barker. The survey was for 5,000 acres and was located such that it enabled the Company to connect it with the so called Sources of the Angas Survey (map 5).

The land taken up through the Special Surveys by the South Australian Company and W.H. Dutton together covered much of the Onkaparinga district, including the areas where, later, the townships of Woodside, Oakbank, and Balhannah were to be established (map 6).

## CHAPTER 3

The Onkaparinga District, 1839-1871,  
Settlement and Consolidation

Annely Aeuckens

Major Themes

**The Dominance of the South Australian Company:** It was the major landholder and also landlord in the Onkaparinga district until the early 20th Century. The Company was responsible for much of the initial occupation and 'exploitation' of the area having claimed not one but two special surveys (plus an extra 1000 acres) in 1839. For most of the 1840s this large holding was used by the Company for the grazing of its stock until it decided to abandon its pastoral pursuits towards the end of the decade. The Company then became the largest landlord in the district (it owned half the total leasehold land) leasing most of its 9000 odd acres to tenants on 7 or 14 year leases. From 3 tenants in 1845, before Agricultural settlement began, the numbers increased to 74 in 1850. It was these tenants and those lucky enough to obtain the remaining freehold land who undertook the agricultural development of the region from the late 1840s onwards. (See *The Company's Tenants* at end of Chapter. N.B.: a 'tenant' could comprise one or more individuals).

**The Importance of Pastoralism from 1839 to the late 1840s;** Due to the South Australian Company's pastoral policies until the mid-1840s, the Onkaparinga district did not witness the establishment of agriculture on a measurable scale for nearly ten years after the special survey(s) were taken out. Many of the very early settlers who came to the area found employment with the Company as shepherds while others established their own pastoral properties. Following the revival of the South Australian economy after the problems of the early 1840s which brought the colony close to collapse, emigration recommenced from about 1845 bringing with it a new 'lease on life' for the country districts. These new settlers enabled a phase of closer settlement to begin in the rural areas around Adelaide and for an expansion in agriculture to take place.

**The Development of Agriculture:** With the emphasis being on the production of wheat and other cereal crops until the late 1860s/early 1870s when, due to problems with diseases such as red rust and weeds such as cockspur, as well as soil exhaustion, the transition towards a new type of farming began. Wheat growing had been the mainstay of the area, as it had been in others, since the early 1850s when it had received a major boost with the Victorian gold rushes and the opening up of the Murray River as a vital transport route to markets in the eastern colonies. However, with the factors listed above and the 'unlocking' of the northern districts to closer settlement, the Hills districts were deprived of their major 'cash crop'. During the 1870s the beginnings of a new commercial agriculture, based on a diversity of pursuits and

products, began to emerge. This small-scale intensive farming was well and truly established by the 1880s/1890s and provided a marked contrast to that followed in the 1850s and 1860s, although many of the activities of the late nineteenth century had their origins in the 'subsistence' farming of earlier years. The 'market gardening' of the early German Settlers in the 1840s and 1850s and the sale of their produce in Adelaide foreshadowed the future agricultural role of the district in the late 19th and 20th Century. However, by this time the district was not supplying Adelaide alone but was directing its produce towards export markets, particularly that of Britain, the focus of a new industrial empire.

**The Growth of communities and townships** which occurred in two main phases; first, the establishment of small, scattered communities from the early days of settlement in the 1840s which then, in turn, provided the nuclei for the various townships, the provision of schools, churches and other essential amenities such as roads, postal and telegraphic services. Before the establishment of formal local government in the early 1850s (e.g. the district road board in 1850 and the district council in 1853), residents were often forced to resort to petitions and letters to the colonial government, to obtain services such as post offices and mail routes to and from settlements. It was a feature of community life in the 1840s that, due to the isolation from the administrative and commercial centre, residents had to band together to achieve specific objectives even if this meant a certain amount of 'inter-village' rivalry. Even with the coming of local government, this method of 'agitation' continued with petitions reaching the Legislative Council on occasion, and friction both between communities or within them seemed to reach a particular height during the 1850s. It was only once all the basic amenities had been provided by the 1860s and communications were improved, that the various townships started to see themselves as part of a larger district rather than separate entities. In fact the Onkaparinga district was widely known up to the mid-late 1840s as being part of the 'northern districts of Mount Barker' and did not seem to develop its own identity until the early 1850s.

**The Role of 'ethnic' or national groups** in the spread of settlement in the district; particularly the Scottish and German immigrants who were the two leading groups (in terms of impact) in the Onkaparinga area up to the 1860s. The German settlers were numerically much larger than those of Scottish origin and were predominantly found in two localities, around Hahndorf-Grünthal (which they settled in the period 1839-early 1840s) and through Springhead-Lobethal-Woodside (from 1841 to the early 1850s). Although a much smaller group, the Scottish settlers, who concentrated in the Inverbrackie-Oakbank-Balhannah area, were important for their role as large landholders and for their influence in both the early social and economic development of the Onkaparinga district. Most of the leading figures in the early history of the area were Scottish emigrants who established themselves in the Onkaparinga in the

first years of settlement. An English enclave in the district was that of Charleston which was positioned, somewhat isolated, on the fringes of the council area. Thus, throughout the 1840s and 1850s the district had a number of culturally distinct and self-contained communities which had their own schools, churches and social life reinforced by the physical isolation which separated them from their neighbours and the capital. It was not until the 1860s that this 'separateness' began to break down with the rise to maturity of a locally-born generation, and not until the late nineteenth century that it had disappeared to any major extent.

#### Minor Themes

**Mining:** There were two phases of mining activity in the district during this period and they corresponded roughly with those occurring throughout the colony as a whole. These took place from the late 1840s intermittently through to the mid 1850s (copper and gold) and then again from the end of the 1860s to the mid-1870s (bismuth and copper).

**Industries:** These were mainly linked to the agricultural pursuits of the district, e.g. flour mills, breweries, timber cutting or to the necessities of rural and township life, e.g. trades such as carpentry, blacksmithing, shoemaking, butchering and so on. It was not until the late 19th Century that any industries of importance emerged or developed such as the Lobethal Tweed Factory, the two large breweries situated in Oakbank or the butter factories at Woodside.

**Churches:** Three phases of church building took place up to the early 1870s; from the mid 1840s-early 1850s (churches were opened in 1845, 1849, and two in 1851), the late 1850s (1857, two in 1858 and two in 1859), and the mid 1860s (1865 and two in 1866).

**Schools:** A few private schools were established in the district in the 1840s, most of these being associated with churches, but the main growth period for schools was during the mid-late 1850s when all the 'public' (i.e. government) schools were built and opened. By 1860 there were 10 'Licensed' and 4 'Private' schools in the district.

**Communications:** From the provision of mail and telegraphic services through to coach routes and the making of roads and bridges. Generally minimal and difficult in the 1840s, communications improved dramatically during the 1850s until by the late 1860s most of the district had access to basic amenities and isolation between the various communities slowly began to disappear as communications became more regular and reliable.

The following, reprinted from *Farm and Garden*, September 9th, 1858, is the memorial referred to in the letter signed 'Clod'. (*Farm and Garden*), p.147.

The Company's Tenants

To the Directors and Proprietors of the South Australian Company

The memorial of the undersigned, tenants of the South Australian Company in the Hundreds of Talunga, Para Wirra, and Onkaparinga, respectfully sheweth -

That your memorialists are desirous of drawing your attention to the anomalous method adopted in leasing your lands in this province.

That your memorialists, by such leases, have no encouragement whatever to effect any permanent improvements on your property.

That the natural effects of such a system are that a thriftless and improvident style of farming is carried on.

That the object of your tenants at present is to make money as quickly as possible, greatly to the injury of the land, and to carry their capital to another neighbourhood and expend it on their own freeholds, in proof of which your memorialists would cite the fact that very few of the original lease holders now occupy the land and that in many instances there have been two or three changes of tenants during the term of one lease.

That it is a matter of notoriety that a more scourging system is pursued on your land than on that of freeholders or land leased with a right of purchase.

That neither are any substantial houses erected nor vineyards nor live fences planted, whilst the original post-and-rail fences are becoming useless, with very little good timber left for their re-erection.

That some of the very best land in the district is comparatively valueless for want of draining.

That it is quite useless for you to suppose that by strict covenants you will compel tenants to effect these permanent improvements; no prudent man would lay out his capital in permanently improving property in which he had only a temporary interest when he could go a few miles away and purchase a freehold for the same amount as it would take to make such improvements; and although it is quite possible that men of straw may sign such covenants it will be with no idea of fulfilling them.

That the resident proprietors, who may be supposed to have the best means of knowing how to manage their property as to secure their own interest, almost invariably lease their country lands with a right of purchase, in proof of which we beg to refer you to the Hon. J. Baker and to the Hon. G.F. Angas, each of whom will receive a copy of this memorial.

That when a tenant avails himself of his right of purchase the proprietor is, generally speaking, enabled to purchase two or three sections from the Government with the money, and to lease each of these two or three sections on the same terms as the original section, thereby doubling or trebling his income at each operation.

That should you anticipate any inconvenience in granting a right of purchase that might be exercised at any time, it

could be made to have effect only at the termination of the lease.

That your memorialists would particularly wish to point out the unfavourable position they will hold in a few years through no vineyards being planted; the soil and climate having been so satisfactorily proved to be admirably adapted for the production of first-class wine, for which there is an unlimited demand and a world-wide market, whereas the only market they have for the exportation of corn will be closed in a very few years by the increase of home production.

That your memorialists understand that in future no leases are to be renewed to those tenants who have freehold land of their own adjacent to your property.

That in the opinion of your memorialists this class of men should more particularly be encouraged, as having a more permanent interest and attachment to the spot, being less likely to be birds of passage, besides being men of capital, and therefore more likely to be enabled to pay their rents in the events of a reverse of times, as shadowed forth above, and which may be much nearer than is generally anticipated.

Your memorialists, therefore, hope you will give these matters your calm consideration, with a view of granting either a right of purchase or remuneration for any permanent improvements to the extent of two-thirds their full value.

And you memorialists will ever pray.

'Clod' wrote that,

Some of the largest proprietors of land in the colony, particularly the South Australian Company, lease their land, expecting the tenants to effect all improvements, and to leave everything at the end of the term without any compensation. Is it any wonder that under such a system the land should be badly farmed? I think I cannot point better than by referring your readers to a memorial which has lately been sent to the Directors of the South Australian Company in England, it being understood that the hands of the resident Manager are tied by his employers, he being compelled of course to carry out their instructions. The memorial needs no comment from me. It is the expression of the sentiments of a large and respectable class of men, who feel where the shoe pinches.

## CHAPTER 4

Early Agricultural Development

Jane Coupland

**Introduction**

Initially the Onkaparinga district was concerned with sheep and cattle grazing. Towards the end of the decade following the taking up of land in the district a new pattern of agriculture began to evolve. Initially wheat and later dairying and fruit growing became the principal lines of rural production.

**The Pastoral Industry in the Onkaparinga District**

The Onkaparinga valley and adjoining areas had long been seen as containing excellent pasture for sheep and cattle. In the first stage of settlement J.B. Hack, an early squatter, had an extensive cattle station near Mount Barker. The Mount Barker special survey taken out by Dutton, Macfarlane and Finnis incorporated most of Hack's station thus forcing him to move elsewhere. Dutton then used this land to graze cattle. The sources of the Onkaparinga special survey taken out by the South Australian Company was used to fatten cattle brought overland from the eastern colonies for the Adelaide market. Later William Smallpiece Whittington purchased land in the Balhannah area and grazed sheep and cattle on a scale which made him one of the pioneers of the pastoral industry.

The pastoral industry in the Onkaparinga district made rapid progress, herds and flocks became more numerous and large areas within it were turned over to the grazing of animals. Pastoralists in general were concerned with extracting as much profit as was possible from rural production; those in the Onkaparinga district were no exception. The pastoral industry continued to expand during the early years of the colony largely as a result of the incentive provided by an established export market. Wool gave the pastoralists good returns upon their investments, while a guaranteed market made investment safe. Pastoralism continued to thrive during the first decade of settlement in the district. However in the following two decades it was to be replaced by other rural activities. This change was initiated by the arrival in the district of small scale farmers.<sup>1</sup>

**The First Settlers and Diversified Agriculture**

Agricultural pursuits were undertaken when large numbers of settler farmers moved into the district. W.H. Dutton settled a group of German immigrants on part of his Special Survey near Mt. Barker. Dutton's reasons for establishing this settlement (which became known as Hahndorf) were two-fold. Firstly, the immigrants, who leased rather than owned the land, would put it into production straight away and thus Dutton could immediately obtain a return for the land. Secondly, the immigrant settlement would provide a much needed source of labour for the district and this would greatly enhance the attractiveness of the land to other settlers. The diversity of rural activities

pursued at Hahndorf is revealed in this contemporary account, Wheat, barley, oats, potatoes and maize are extensively grown; dairy cows and flocks of sheep are kept; bacon is much cured; and the quantity of land substantially fenced for all rural purposes, is very considerable.<sup>2</sup>

Although many agricultural activities were pursued, wheat rapidly became the principal crop in the district. Probably farmers relied on a principal crop such as wheat; to provide their main source of income, with other activities supplying domestic needs and also, undoubtedly, providing an additional source of income.

Throughout the Onkaparinga Valley, wherever the settlers established farms they began to cultivate crops and raise animals. From available information<sup>3</sup> it has been possible to determine the most likely layout of a farm of the early 1840s. A typical farm would have been made up of five, ten or twenty acres of wheat, often a field of potatoes, usually a vegetable garden, and several cows and pigs. The layout of farms in predominantly German settlements was slightly different to the English settlers' farms.

Immediately at the back of the house there was usually a vegetable garden, then an orchard, a field of either wheat, barley or potatoes and finally some land for the grazing of stock. This type of farm layout was typical of all German villages when first settled (e.g. Lobethal).

The rural basis of the district and the pattern of diversified agricultural production can be seen clearly from a glance at some of the occupations of the settlers. The records for the 1840s and early 1850s, show that the majority of people listed were farmers. Other occupations listed include the following: blacksmith, wheelwright, butcher, storekeeper, shoemaker, brewer and publican. Occupations which were primarily concerned with processing agricultural products and with providing farmers with equipment and supplies. This also reveals the development of factories in the district which processed rural products. For example, the first brewery established in the District was Mr. Thomson's brewery in Balhannah, which had but a short existence owing to the financial difficulties of its proprietor. Later in the early 1840s the Johnston family took up land in the Oakbank area and shortly afterwards, they established the Oakbank Brewery. This was the beginning of the most important industry in the township (see chapter 9).

#### Size of Land Holdings

The size of land holdings within the Onkaparinga district during the first decade of settlement varied only slightly, with the most common size of holding being about 80 acres. The South Australian Gazette for 1850 lists the size of each occupant's land holding for the purpose of levying tax. It appears that there were a great number of farms of between 1 and 20 acres in size, and a similar number of farms of between 150 and 170 acres and others between 230 and 250 acres. Only a few farms are found with areas outside of these ranges. Most

**Table 1** Summary of crop records for South Australian Company Land within the Onkaparinga Special Survey

	1845	1850	1855	1860
Total acres leased within the Onkaparinga Special Survey	326	8312	8819.5	9013
Acres wheat % of area leased	115	2787 33.5%	3156 35.8%	3957 43.9%
Acres of barley % of area leased	29	207 2.5%	99 0.1%	234 2.6%
Acres oats % of area leased	2	319 3.8%	163 1.8%	75 0.8%
Acres potatoes % of area leased	10	130.5 1.6%	70.25 0.8%	63 0.7%
Acres hay % of area leased	0	73 0.9%	302 3.4%	413 4.6%
Area garden % of area leased	3	6.5 0.08%	2.5 0.03%	6.5 0.07%

Area uncultivated % pf area leased	167	4238 51%	4235½ 48%	3170½ 35%

were of 80 acres in size, or a multiple of 80 acres, (i.e. 160, and 240 acres). This pattern was undoubtedly a result of the implementation of the Wakefield principal of the division of land into 80 acre sections for sale to the settlers.

Usually when it was leased it was subdivided into smaller units thus breaking up the 80 acre section. The pattern of the size of land holdings which developed was this: half acre allotments in the township; five acre allotments in the area immediately adjacent to the township; and holdings of 80 acres or multiples of 80 acres, for the surrounding country areas.

This seems to have been common in the Onkaparinga District. For example, when the township of Woodside was laid out, the land was divided into allotments of between a half and five acres each. Section 4208 belonging to J. Thomson was divided into a number of allotments when the township of Balhannah was laid out. The allotments varied in size from a half to four acres each. Land in the area where Grünthal was established was divided into allotments ranging in size from 10 to 21 acres, with a great many being 13.5 acres each. In this case the size of the allotments and the fact that they were generally long strips of land indicate that the nature of farming and settlement in Grünthal was quite different to the adjoining townships. Lobethal was laid out in a similar manner (i.e. as a farmlet village or *Hufendorf*) but with much smaller allotments (3-4 acres).

## Notes

1. There was considerable pressure throughout the latter half of the 19th century to move the pastoralists further north to make land available in the Adelaide Hills for small scale, intensive farming. Wakefield had long stated the virtues of closer settlement, arguing that Pastoralism encouraged a diffusion of settlers which was not advantageous to the economic, scientific or cultural development of the colony.

CHAPTER 5  
Pioneer Farm Layouts and Buildings  
 Gordon Young

Several historic farm layouts have been studied in the Onkaparinga district. These vary from loosely associated groups of farm buildings to the almost formal layout of Gumbanks farmyard. Many of the farms like those of the German settlers in the Neudorf and Tabor Valley areas tended to be located away from the government roads alongside the Onkaparinga and its tributaries (i.e. where an abundant water source was available). The hilly terrain of the upper part of the river valley caused the farm buildings to be spaced out along the contours. An example of this kind of farm layout is the Klopsch farm at Neudorf, which is illustrated in Figure 2. A similar farm layout was Willow Springs, off Mattners Road (Figure 3).

On the flatter ground adjacent to the Onkaparinga proper, farm buildings were more closely grouped together and in some cases they lay alongside the main government roads. This is evident with the Edwards farm at Oakbank, where its barn stands sentinel at the entrance to the farmyard (Figures 4 and 5).

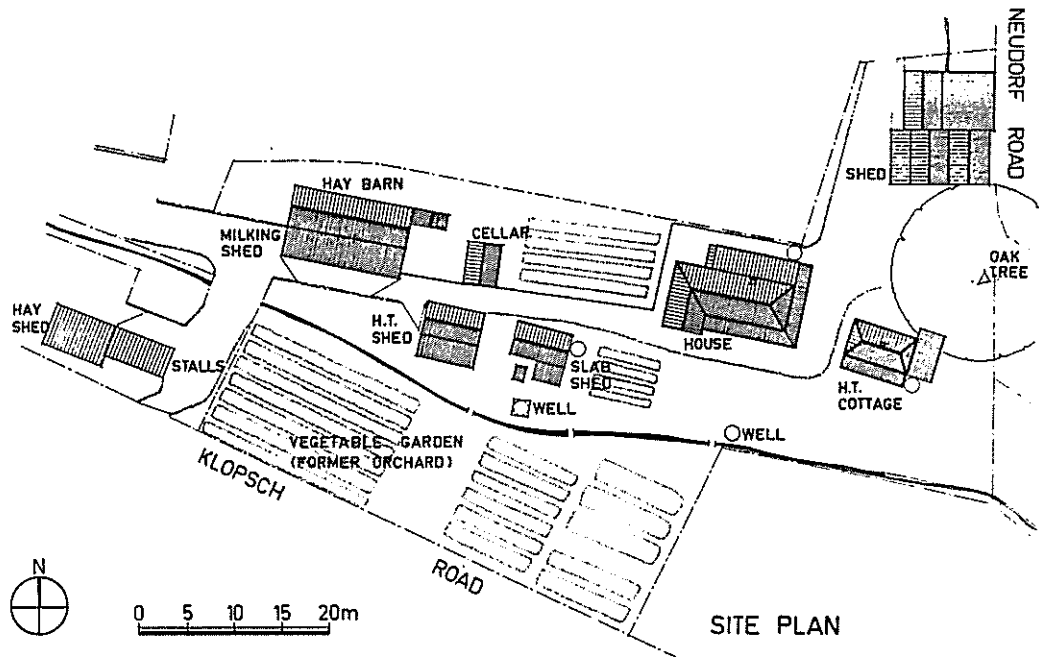

In some areas the farmhouse was placed apart from the farm buildings. This is illustrated by the Newman farm at Charleston (Figure 6), but generally the two were juxtaposed.

The type and arrangement of the farm buildings depended to a large degree on the farming activities carried out and on the size of the farm. After the first decade of settlement (i.e. by 1850) the majority of farms listed in the district were of 80 acres (see previous chapter). There were also many smaller farms and some larger ones of 160 acres and 240 acres (these were multiples of the 80 acre sections created by the Wakefield system).

Some of the smallest farms were those established at Lobethal in 1842 by the first German settlers, the majority of which were 3 acres, similar to those created at Hahndorf in 1839. From the very beginning these settlers practised the small scale mixed farming techniques which they had used for centuries in their Prussian homelands. Apart from wheat (usually grown as a cash crop) they grew barley, oats, rye and peas and a variety of other vegetables and soft fruits. They only owned a few cattle, but they also kept goats and pigs, all of which provided them with a choice of meats and dairy products. An attempt was made to grow vines, which was not very successful in that part of the Adelaide Hills, but the growing of hops thrived and later in the 19th century it became an important industry.

Their traditional husbandry continued well into the 19th century and it later formed the basis for more specialised farming activities such as large scale dairy farming. The variety of small building structures required for this type of farming is well illustrated by the Klopsch farm. Here, still existing today, one can find a hay-barn, a milking shed, a

small half-timber barn for storing produce and a large cellar. Another slab hut was probably used as an external kitchen and smoke-house (Figure 2).

A common feature of the Neudorf area is the combined half timbered barns and lean-to milking sheds. One of these is illustrated in Figure 8 on the following page. Small threshing barns combined with a grain store and stables were also common. Later, or on more modern farms, threshing was done mechanically and there still remain the paved areas where this and chaff cutting were carried out by horse powered machines (Figure 9).

In contrast to the small mixed farms of the Lobethal-Woodside area, there were the larger sheep properties of the Mount Charles-Murdoch Hill areas (viz. Thomas Inglis 'Sandy Water Holes' which occupied 1200 acres by 1870). On these properties their owners erected field barns, similar to the one still remaining on Section 5281 and locally known as the 'fort'. The most complete example of an early sheep station (farm) is 'Gumbanks'. This unique property still retains its original hand shearing sheds as well as the later 19th century-early 20th century galvanised iron sheds built to house the new mechanically powered shearing equipment (Figure 10).

#### German Barns

Some of the district's finest barns were those built by the early German settlers in the Lobethal area. Apart from the half-timbered barns at Neudorf mentioned above, there are the substantial stone barns of the Schoenthal area. One of these was built by the Pfeiffer family in the mid 1850s on Section 5066. It was used both for threshing and storing grain and as a cellar for the storage of meat and dairy products. On its east elevation is a large open lean-to for parking and protecting farm machinery (Figure 11).

Another German farm complex of significance is Ravenswood (Section 4218). This was developed by J.F. Paech in the early 1850s and it is architecturally related to the other Paech properties in the Hahndorf area. It has a mixture of substantial stone and timber farm buildings roughly forming a square around an open paddock (or yard). The constructional details of the timber threshing barn are similar to those described in the Hahndorf Survey and as illustrated in Figure 12.

#### Bake-ovens, Cellars, Kitchens and Smokehouses

All the early settlers built themselves external kitchens (Figure 4), although the larger German houses incorporated these within the house proper. Sometimes the kitchen had a bread oven as well as a cooking hearth or it may have been used to smoke pork products. Such buildings are to be found at 28 Lenswood Road and 47 Woodside Road and are illustrated in Figure 14.

A variety of cellar buildings has also been discovered and a detailed study made of some of them in the Lobethal area. These were either completely above or partly buried into the ground and they usually had high-pitched roofs with attic storage spaces (Figure 13).

## CHAPTER 6

Dairying

Jane Coupland

The production of wheat in the Onkaparinga district began to decline after 1870, at which time other forms of agriculture began to develop; dairying was one such activity. The raising of stock for milk, butter, and smallgoods was widespread by the 1870s, but it was not until the late 1880s that creameries and butter factories started to operate in the area. Previous to this date, individual farmers must have made butter from the milk of their own cows using gravitational methods to separate cream from milk.<sup>1</sup> In the mid 1880s the separator came into use in South Australia.<sup>2</sup> Being accessible not to individuals but only to companies with capital, the introduction of the separator was accompanied by the establishment of creameries and butter factories.<sup>3</sup> The procedure for making butter was this: farmers sold their milk to the creamery which separated the cream from the milk; this was then made into butter at the factory. It was not until the second decade of this century that new technology permitted separation to be done on the farm thereby eliminating the need for creameries. Up to that time creameries were numerous throughout the Adelaide Hills.

**The Factories in the Woodside-Balhannah Area**

The first creamery and butter factory to be established in the Onkaparinga District was the Onkaparinga Cheese, Butter and Produce Company.<sup>4</sup> The butter and cheese factory was located at Woodside and its creamery was located at Murdoch's Hill. Although the date of establishment of the company does not appear on company records it is possible that the factory was established as early as April 1890<sup>5</sup> (with the creamery being established in 1894 or 1895). Since the earliest butter factory was said to have been established in 1889<sup>6</sup> at Gumeracha, the Woodside factory is one of the earliest factories in the State.

It has been suggested that the Woodside factory was established by the South Australian Company to process the milk produced on the farms operated by the Company's tenants.<sup>7</sup> The South Australian Company is known to have taken up considerable quantities of land in the Onkaparinga Valley by means of the special surveys. It is also known that the company leased much of its land to small farmers, and so it is quite possible that the company could have established a cheese and butter factory in the district given that many small farmers in the area were turning to dairying. To date, however, no records which indicate that the South Australian company established the Onkaparinga Cheese, Butter and Produce Company have yet come to light.

It has also been suggested that the Company operating the factory was forced to close it for a period of time: 'Disputes between the Company and the tenant farmers forced the closure of the factory under the original arrangement.'<sup>8</sup> A meeting

held in Woodside in July, 1905, of the Agricultural Bureau<sup>9</sup> gives some ideas of the problems the tenants faced. Mr. R.P. Keddie delivered a paper to the meeting which was critical of the dairy farmers. He argued that the dairy farmers under-fed their cows, and crowded them, thereby over-grazing their land. The system of short leases, he continued, led to the situation where poor farming practices were maintained. As a result of these poor farming methods dairying appeared unprofitable to many farmers, and this attitude, he argued, helped retard the progress of the Onkaparinga district, since it encouraged the return to sheep grazing. In response to Mr. Keddie's paper, Mr. Hughes (who was on the Board of Directors of the Woodside Cheese and Butter factory) argued that the situation for leases had changed considerably in recent years, such that leaseholders could now expect a better state of affairs than had previously existed. Leaseholders were now receiving consideration from the South Australian Company for the improvements they made to their properties. According to Mr. Hughes' argument, the lack of a progressive spirit, which undoubtedly had been caused by short leases, ought not to persist owing to the improved conditions in which tenants now found themselves. The meeting was brought to a close with statements praising the dairying industry and acknowledging the development of the district. The Chairman of the meeting had this to say by way of conclusion '...the Onkaparinga district carried more townships and dairy factories to a given area than any other part of the state, except perhaps, Mount Gambier.'<sup>10</sup>

The closure of the Onkaparinga Cheese, Butter and Produce Company probably occurred some time before the early part of 1894, since we know that Mr. Osborn, the first manager of the factory, established a factory in Balhannah when the Woodside factory closed,<sup>11</sup> and that this factory was established in 1894. The Onkaparinga factory was again operating in the latter part of 1894 under a Board of Directors led by the Chairman, Mr. Caldwell. If the South Australian Company had initially owned the factory, it is unlikely that they continued to own the factory after this date since no mention of the company was ever made in the minute book or the half yearly reports of the Onkaparinga Cheese, Butter and Produce Company.

The Company's half yearly report for 1895 records that '...the business had been expanded by the erection of a building and plant for a creamery at Murdoch's Hill.'<sup>12</sup> The report also recorded that the company made a profit of £713 during the six months up to April 1895, and that in all respects the company was sound. According to the Chairman, the Woodside factory had a larger capacity than any other factory in the colony. In the same report the Chairman is reported to have argued that had the company produced only butter, a loss would most certainly have been incurred. It was the manufacture and sale of cheese which made the factory financially viable. From company records it seems that this remained the situation for much of the early history of the factory. It is possible that butter production was unprofitable because of the pricing policy pursued by the company. Given the costs of production and the price butter could reach on the market the

company paid too high a price for the milk it purchased from local farmers. This pricing policy was pursued probably because it enabled the company to process in its factory a large share of the milk produced in the area. This policy was undoubtedly a response to competition from other factories in the surrounding area, especially from Mr. Osborn's factory in Balhannah.

The Balhannah Cheese and Butter factory soon became a thriving concern as the following report indicates:

Using the most modern equipment available, G.F. Osborn soon built up a flourishing business, and farmers from many surrounding areas brought their milk for processing. Many varieties of cheese were made, winning gold medals at various Exhibitions in Australia and Overseas. An export trade in cheddar cheese was established in England, the cheese being packed in earthenware pots with an earthenware lid for the journey.<sup>13</sup>

The only other factory to be established in the Onkaparinga district was the Lauterbach brothers' cheese and butter factory in Woodside which opened in 1905. One of the brothers, Johannes Lauterbach had been previously employed as Manager of Murdoch's Hill Creamery until he resigned in January 1899 to take up the position of Manager at a cheese and butter factory in Wilmington.<sup>14</sup> The Lauterbach's factory proceeded to take first and second prizes at the British Dairy Show and in 1907 took first prize for cheese at the Adelaide Show.<sup>15</sup>

The cheese and butter factories in the district enjoyed the advantages of refrigeration. When refrigeration chambers first came into use at Port Adelaide in April 1895, the Onkaparinga Cheese, Butter and Produce Company sent one of its Directors, Mr. Hughes to inspect the chambers and to report back to the Company. It seems that immediately following Mr. Hughes' inspection the company procured refrigeration facilities, since at the half yearly meeting (22nd April 1895) Mr. Caldwell reported the following:

Since the last meeting (October 1894) there had been expended on buildings £200 and on plant £849, and now they possessed the best refrigerator and the most complete factory in the colony...<sup>16</sup>

Refrigeration was a great boon to dairying since, to a large extent it freed the dairy factories from the constraints of weather thus enabling the proprietors to obtain high quality products all year round. Although, 'the refrigerator had proved a great boon...'<sup>17</sup> to the industry, climatic factors had not been totally mastered. Output of milk continued to be determined largely by seasonal conditions, as was indicated by Mr. Caldwell's statement of April, 1896:

...during the past six months, they (the company) had not done a very large business on account of being unable to get enough milk to handle, the season explaining this.<sup>18</sup>

Despite the lack of technical know how and poor methods of farming which made the dairy industry vulnerable to climatic

George Frederick Osborn's Balhannah Cheese and Butter Factory opened in 1894. It soon became a thriving concern using the most modern equipment. In 1925 Messrs Spoehr and Son took over the business which they continued to run until 1929 when the factory was closed.

When surveyed in 1983, the site included the original factory premises with a later cold room built of cavity brickwork lined with timber and insulated with charcoal.

Apart from a large turn-of-the-century house, the site also included a bluestone building subdivided into four small rooms used to accommodate workers.

Former Balhannah Cheese and Butter Factory in 1983

Original workers' accommodation in 1983

and environmental factors, the suitability of the valley to dairying enabled the industry to develop and prosper. The farmers in the Valley, claimed Mr. Caldwell during the November 1898 meeting of the Onkaparinga Cheese, Butter and Produce Company:

...had a good district, as in the Onkaparinga watershed there was excellent pasture suitable for the production of butter and cheese - in fact, equal to any in the world - and it has been shown that the English and Danish productions could not compare with the Onkaparinga as far as results went.<sup>19</sup>

Thus, by the turn of the century, dairying was well established in the Onkaparinga district, there being three butter and cheese factories and several creameries in the district. The milk produced in the Onkaparinga Valley was processed not only at these three factories but also at factories in the surrounding areas, such as Blakiston and Mount Barker.

Since the late 1870s, farmers had formed groups to agitate for better conditions, they wanted land to be made available on reasonable terms and a better distribution of profits between middlemen and farmers.<sup>20</sup> The Farmers Mutual Association which was formed in 1879 was committed to the principle of co-operation. As a means of exercising this principle the Association agreed to buy in bulk and distribute goods at the lowest price possible, and to control the rate at which products were released on to the market so as to secure the best prices for producers. Later, in 1888 the South Australian Farmers' Co-operative Union was formed.<sup>21</sup> This Union sought to provide facilities for farmers, such as the procurements for sale at low prices, implements and other essential goods, and to dispose of produce in markets so as to achieve good prices. The Union was formed at a time when farmers were experiencing difficulties owing to a state-wide depression. The Union was committed to benefiting a class they considered '...are the mainstay of the colony'.<sup>22</sup>

The Board of Directors of the Woodside factory, under the Chairmanship of Mr. Caldwell, had stressed to the dairy farmers in the district the need for co-operation. The capital, with which the company was established, had been accumulated from the sale of shares to dairy farmers. The Company's Directors encouraged the farmers to continue to supply the factory and the creamery with milk rather than purchase a separator and attempt to produce dairy products on their own farms.<sup>23</sup> This would destroy the principle of co-operation. The factory, it was argued, could achieve a better quality product than could the individual. To supply the company would best facilitate the development of the industry and the prosperity of the producers. Furthermore the directors argued for a union of co-operative dairy factories on the basis that such an organisation would best enhance the prosperity of the farmers. In April 1898, the Chairman stated the following:

A union of co-operative dairy factory companies is not only desirable, but is absolutely necessary to enable us to secure for the milk suppliers of the colony those pennies

and shillings which are in the meantime rolling into the pockets of middlemen and others.<sup>24</sup>

The issue of co-operation between producers and manufacturers of dairy products attracted much attention during the 1890s owing partly to the recent difficulties faced by the farmers in the drought stricken northern areas of the State and partly to the then current depression.

Towards the end of the 1890s Federation became an issue which generated much discussion by the Companies and the farmers in the District. Federation involved the removal of all tariffs, including those which had hitherto protected South Australian dairy producers from their Victorian competitors. After Federation the local producers would be protected only by distance.

Undoubtedly competition would be more keen, and it would be to the advantage of the farmer to take the greatest care possible in improving the quality and condition of his cattle and the milk supply, while cheese and butter makers would have to be provided with the best possible plant and methods to enable them to produce only commodities of first-class quality.<sup>25</sup>

In regard to the future of the industry in South Australia Mr. Caldwell continued,

In all probability the Victorian producers would give more attention to the Sydney market, thus allowing South Australia to deal more with Broken Hill...If Great Britain adopted a preferential tariff for her dominions and dependencies against the outside world our business connections with the London market would certainly improve. Then, again, it was just possible that the local demand may soon begin to draw more heavily upon supply, which would result in the hardening of prices, while under Federation the market fluctuations would not be so great as they had been, and a truer balance would be struck as between supply and demand...We therefore had no cause to take a gloomy view of the future.<sup>26</sup>

The three butter and cheese factories in the district continued to prosper, well after Federation in 1901. Although this particular event did not disrupt the dairy industry to any great extent, other events were to alter the nature and structure of the industry as well as the number of factories in the district.

World War 1 and the Great Depression of the 1930s were responsible for the changes which occurred in the industry in the first half of this century. The outbreak of war in 1914 resulted in many young men leaving the district to go into military service which caused a serious labour shortage. Many farmers' sons who worked on the farm, or many who worked within the dairy industry, and others who worked in various trades were no longer available to carry out these duties.<sup>27</sup> This, together with shortages of materials, meant that farmers and producers alike encountered great difficulties in maintaining

An aerial view of the South Australian Co-operative premises at Woodside in the late 1960s. As well as supplying pasteurised milk to metropolitan Adelaide, the factory produced cheese, butter, margarine and smallgoods.

When it was closed down in the mid-1970s, the site had been used for almost ninety years for dairy production. The complex included one of the earliest butter factories in the State.

Delivery of milk to the Woodside factory in 1928

Butter churn room, Woodside factory, circa 1928

production. In response to this situation many changes were made to the way in which milk was delivered to the factory, as well as to the processes within the factory. Milking machines were introduced to maintain milk supplies despite labour shortages. Similarly within the factory, mechanical agitation replaced hand stirring. As from the very beginning of the dairy industry, prior to 1914, milk was delivered to the factory by individual dairy farmers. However, during the war years, the collection of milk by truck from the farms of many dairy farmers was introduced. Several farmers organised between themselves to pick up milk from all their farms and take it to the factory. Later this method of transporting milk to the factory was expanded to include most, if not all, the farmers in a certain area, and refrigerated tankers were introduced to collect the milk.

The onset of the depression in the late 1920s and the 1930s caused further disruption and dislocation to the industry. The tendency toward bulk milk collection continued as did the trend toward the installation of labour saving machinery in the factory. Whilst unemployment in the town was high many workers were maintained within the factory although wages tended to remain low.

Mr. Osborn's cheese and butter factory at Balhannah passed, in 1925, to Messrs. H.A. Spoehr and Son, who continued the business until 1929 when the factory was closed.<sup>28</sup> The factory's closure was more than likely a result of the re-organisation of the whole milk trade<sup>29</sup> which began to operate between Balhannah and Adelaide in the late 1920s.

The major change which this trade brought about was the collection of milk from Balhannah and surrounding areas and the daily transportation of this milk to the Adelaide market. Refrigerated transportation made bulk milk deliveries to Adelaide possible, and made the butter and cheese factory at Balhannah redundant. Undoubtedly, the growth in the demand for milk in Adelaide was responsible for the introduction of this trade.

The other two factories in the district, the Onkaparinga Cheese, Butter and Produce Company and the Lauterbach Brothers Cheese and Butter factory continued to operate throughout the depression years, although by that time both factories had undergone a change of management. The Onkaparinga Cheese, Butter and Produce Company was purchased in 1919 by the South Australian Farmers' Co-operative Union.<sup>30</sup> However, much earlier, whilst the factory was still under the management of Mr. Caldwell the company was wound up.<sup>31</sup> It has been suggested that the factory was closed because a large proportion of company shares were held by non-milk producers.<sup>32</sup> As yet no company records are available to verify this argument. The date of closure has been given as 1908,<sup>33</sup> but, by 1919 when the Farmers' Co-operative Union purchased the factory, it was again in operation. The owners of the company at the time were Murphy and Fromen.<sup>34</sup> The Lauterbach brothers' factory at Woodside was purchased by AMSCOL (the Adelaide Milk Supply Company Limited), although Mr. J. Lauterbach continued as manager of the factory.<sup>35</sup>

By the late 1930s both factories were thriving concerns. It was claimed that the dairy industry had increased four fold during the 1920s. Of the AMSCOL property the following was reported '...the factory has expanded, and today sends thousands of gallons of milk and large supplies of butter and cheese to city consumers.<sup>36</sup> At the same time the South Australian Farmers' property was said to be processing 1,000 gallons of milk daily and 18,000 pounds of butter per week. Bacon and smallgoods as well as margarine were being produced at the factory.<sup>37</sup>

## CHAPTER 7

The Fruit Growing Industry

Jane Coupland

**Introduction**

Although orchards have been cultivated since the very earliest years of the colony, a fruit growing industry was not established until after the 1880s, when the fruit export trade to England was opened. This trade provided an immense stimulus to fruit growers, since it considerably enlarged the size of the market for their produce. In response to this trade the scale of production of established orchards quickly increased, whilst new land was turned over to orchards. Constant improvements such as refrigerated transport boosted the fruit export industry during the closing decades of last century. As the export industry flourished so too did orcharding in South Australia. The industry, however, was not without its problems. Since the marketing of fruit took place at the time when the fruit ripened, a glut of fresh fruit usually occurred when farmers throughout the State simultaneously took their produce to market. Often surplus fruit was wasted. At other times of the year the consumer found it difficult to purchase fruit as it became extremely scarce, if it was available at all. It was not until the turn of this century that these problems were largely overcome.

**Fruit Growing in the Onkaparinga District**

The Fruit Growing Industry in the Onkaparinga District emerged in different parts of the district for different reasons. The commercial planting of fruit trees by farmers in the Balhannah area began in the 1860s and early 1870s in response to the unprofitability of wheat cultivation. Wheat yields fell largely due to the declines in soil fertility, which were experienced by farmers in the 1860s. Many wheat farmers left the district for the new wheat fields being opened up in the Northern districts of the State. Those farmers who stayed, turned to different types of rural production such as dairying and orcharding. Within a decade these two activities replaced wheat as the principal rural activity. Whereas dairying was concentrated in the Woodside-Oakbank-Balhannah area orcharding was concentrated in the area around Balhannah. Initially a variety of fruits were cultivated, including peaches, apricots, nectarines, plums and apples. Different types of vines and also almonds were also cultivated. The produce was regularly carted to the city in drays for sale.<sup>1</sup>

Later, in the 1880s the cultivation of fruit trees was undertaken by farmers in the district now known as Forest Range and Lenswood, an area opened to settlers during the 1860s when the road from Norton Summit to Lobethal was built. At that time the hills were heavily covered with stringy bark gums and the first settlers to move into the area were timber splitters and cutters. To a very great extent the demand by Adelaide builders for housing timber was satisfied by the timbers cut

from the Forest Range district. Men, appropriately known as 'splitters', split the stringy bark into wood for lath, shingles and palings for use in the construction of houses, whilst other men, the 'pit saw men', felled the trees and sawed the timber manually into squared timber for joists, floor boards and house roofing. As a result of the timber cutting industry a great deal of land was cleared, and by the 1880s much of it was being used for rural production, such as orcharding.

During the early years of the industry in the Forest Range and Balhannah areas the difficulties of marketing fruit were the same as those faced by growers elsewhere in the State. The industry as a whole was faced with several common problems, all of which stemmed from the inability to control the rate at which produce came onto the market.

There was no cold storage. The market was supplied direct from the gardens with a large number of varieties of apples and pears ripening in succession marketed direct from the tree.<sup>2</sup>

The above statement, made by the Balhannah Co-operative Society, refers to the situation for growers prior to the First World War in the Balhannah area. It identifies the major problem as being the marketing of fruit direct from the tree, a problem not only limited to the local growers.

Prior to the introduction of cold storage, produce came on to the market almost as soon as it ripened, consequently great quantities of fruit were available within a very short period of time, usually only three months.<sup>3</sup> Often this resulted in a glut of fruit during the picking period, and a scarcity of fruit at other times of the year.

Some attempts were made to preserve fruit so that the period in which fruit was most plentiful in the market place could be extended, thereby avoiding gluts and bringing better prices to the growers. Most growers in the Forest Range-Lenswood-Balhannah area had an apple store. This was usually ...a cellar or stone built shed dug into the side of a hill, with shallow racks...upon which late, long-keeping kinds were laid out in shallow layers.<sup>4</sup>

The apple store or cellar allowed exceptionally long keeping kinds of fruit to be kept for several months (up to about August). But apples kept by these means,

...although in reasonably good condition to look at, were pretty poor apples.<sup>5</sup>

When these were gone there were no apples at all until the first early fruits ripened in January. Thus, the apple store did not solve the problems of marketing fruit since the quality of the fruit suffered and seasonal fluctuations were still pronounced.

The first major step taken to overcome the problems associated with the marketing of fruit, was the establishment of cold storage facilities at Balhannah in 1914. Mr. Augustus Filsell and Mr. H.N. Wicks co-jointly built this, the first

private cold store specifically for fruit storage in Australia.

As a whole of wooden construction and saw-dust packed walls it was powered first by oil engine and then by gas producer...<sup>6</sup>

Initially the cold store had a capacity of 3,000 bushels, but this was increased in 1918 to 12,000 bushels. Later, in 1920, Wicks and Filsell formed the Balhannah Cold Stores as a Company, at which time the capacity of the cold store was 24,000 bushels.

Following the establishment of cold storage in Balhannah another cold storage plant was built in Lenswood. The latter had a capacity which made it the largest of its kind in the State.<sup>7</sup> Cold storage enabled growers to extend the season for marketing fruit from three months to nine months.<sup>8</sup> It thus gave the growers control over the marketing of fruit and in doing so, was responsible for overcoming one of the major problems which had fettered the development of the industry.

Another development which in the very early years of fruit growing was of great importance to the industry was the establishment of an export trade in fruit. In the early 1880s shipments of fruit to England were undertaken, however the quality of fruit deteriorated greatly.<sup>9</sup> With the introduction of refrigerated transport in the late 1880s the large scale export of fruit to overseas markets was made possible, and by the end of the century an export market had been firmly established. This export trade provided growers with a large and more or less stable market, an essential requirement for any agriculturalist. In response to the securing of such a market improved production in fruit growing areas increased, growers became more specialised and more land was turned over to orchards.

The State Government played an important role in consolidating the fruit export trade and in supporting the fruit growing industry in general. In 1894 the export of apples was inaugurated by the South Australian Government Produce Department and by the First World War this trade was considerable. The State Government also supported the fruit growers by giving advice on production techniques and methods of culture. The Government also established State Orchards on which experiments could be conducted to determine the varieties most suited to various areas.<sup>10</sup>

In the Balhannah area, the establishment of the Balhannah Nurseries in 1908 by Mr. H. Wicks<sup>11</sup> greatly facilitated the continued development of the industry. The nurseries provided most of the young trees required by growers in the area and assisted the industry by disseminating knowledge.

In association with the fruit growing industry, there were established a number of secondary industries. One such industry was the cider factory near Balhannah (Figure 15). This was brought into operation to eliminate the wastage of fruit that tended to occur during the peak picking period; it enabled,

...undersized and slightly blemished fruit to be converted into the...popular beverage known as Elmsdale Temperance cider...<sup>12</sup>

A cannery was established in the Forest Range-Lenswood area to process fruit not sold as fresh fruit to consumers. During World War I when labour was short it has been recorded that women from the surrounding areas worked in the factory peeling the fruit.<sup>13</sup>

Another factory established in association with the fruit growing industry, was the Glengyle Jam Factory.<sup>14</sup> Following a season in which there were many surplus apples and plums Mr. J.C. Grasby established a jam making business turning surplus fruit into jam. The business expanded rapidly, and employed several extra hands in the fruit season as well as absorbing much of the surplus fruit from the surrounding district. The factory was forced to close during the First World War because of the difficulty of obtaining tin, sugar and labour.

Although the fruit growing industry suffered a setback in the Great Depression of the early 1930s, by the end of that decade exports rose as the industry made '...steady and sound advancement...'<sup>15</sup> The Mount Barker Courier recorded the following:

In 1939 it was stated that the best apple orchards in the State were to be found in the Balhannah district and that the bulk of the State's export fruit was derived from that vicinity.<sup>16</sup>

The fruit growing industry again declined during World War II as domestic and overseas markets dwindled and labour and other raw materials became increasingly scarce. Although the level of exports after 1945 was never as high as the level reached in the late 1930s the post war era saw the industry regain its former importance as a major industry in the district.

## CHAPTER 8

A Mining History of the Onkaparinga Council Area

Greg Drew

**Copper Mining**

Two important copper mines, Balhannah and Grünthal are located within a short distance of each other, west of Balhannah township. Both mines were discovered and worked during the period of 1869-1876. Encouraged by rising copper prices between 1870 and 1872, very similar mining and treatment plants were installed in 1872 but due to a fall in copper prices, both mines closed in 1876.

Today, the engine, boiler and crusher houses and chimneys of both mines remain almost completely intact and in near perfect condition. It is noteworthy that they were similar to many plants that were installed in the Moonta-Wallaroo district and Flinders Ranges in the late 1860s and 1870s. As illustrations of the mining and treatment technologies of that period, these items are the best examples of their kind in the State and should be preserved as part of the State's heritage.

**Balhannah Mine**

In July 1869 Mr. Ey discovered rich bismuth ore outcropping on a section belonging to Mr. Camac whilst prospecting for copper. In the same month the Balhannah Mining Company was formed to work the property, paying a royalty of 1/20 to the landowner and mining operations commenced in August under Captain Burt. The Mineralisation contained copper, bismuth and gold associated with quartz and carbonate minerals in a north-westerly steeply dipping vein up to 3m wide. Initially, the ore, which averaged 7% copper, was hand picked to separate the copper and bismuth ore, bagged and carted to the Port Adelaide smelting works.

The low grade ore was stockpiled for treatment by a jigger which was installed by October, 1869. Gold was associated with the bismuth ore and many small pieces of gold were picked out of the jiggers as well as several larger pieces from the ore.

In March 1870 Captain Burt was replaced by Captain Henkel, who had managed Wheal Gawler at Glen Osmond in 1846.

A small 12 h.p. steam engine and 4 head stamp battery were erected and a number of German miners were brought out to work in the mine. By 1871, the mine was believed to be 'one of the finest mines in the world' and Mr. Cousins was contracted to erect smelting works on the mine to reduce the bismuth ore into bismuth. The company purchased the mine property of 46 acres in 1872 for £1050 and on the advice of Captain Henkel decided to invest about £3000 in large scale machinery. The construction of the new buildings and the installation of the machinery was under the direction of Mr. Tippet, who had supervised the construction of a similar complex at the Yelta Mine, Yorke Peninsula in 1871.

The mine buildings were built by Mr. Richards of North Adelaide using local freestone and consisted of:

Figure 16 Plan and section of Balhannah Mine in 1873

- . **Boiler house** containing a 9.2m x 2m Cornish boiler from Burra.
- . **Engine house** (4.9 x 12.2m x 6.1m high) containing a 50 h.p. horizontal steam engine. The engine and all castings were made by Andrew Jones of Adelaide and was probably a 56 cm diameter engine with a 1.2m stroke, and 4.5m flywheel. The engine operated the 30 cm pumping equipment in the main shaft, the crusher and the jigging (concentrating) machinery.

. **Crusher house** (7.3m x 6.1m) containing 2 large cylindrical stones (crushing rolls) revolving towards each other. The copper ore from the main shaft was drawn on trucks up an inclined tramway to the crushing rolls and then passed to the jiggers along the eastern wall of the crushing house. This produced a concentrate of about 18% copper with the residue (slimes) passing to pits.

The new machinery commenced operations at the beginning of 1873 by which time about 1220 tons of 7% copper ore and 25 tons bismuth ore had been stockpiled at the surface awaiting treatment, and about £20000 had been expended on the mine. The copper concentrate was carted to the Scotts Creek Smelting Works at Dawesley but the bismuth ore was smelted in plumbago pots on the mine. Free gold in the ore and from the jiggers was however apparently 'appropriated' by the employees.

Operations ceased in early 1876 due to the slump in bismuth and copper prices and the continued failure of the lode to prove payable. The shoot of secondary copper ore had been stoped (mined) from the surface to the 56m level and development work had been undertaken into the low grade primary ore but the metal content was too low to be of economic value. The main engine shaft had reached 78m and several thousand tonnes of ore had been stoped from the 5 levels. The recorded value of production up to 1875 is 16377 pounds of copper ore and 7425 pounds of bismuth ore. However, expenditure had far exceeded the receipts from the sale of ore.

In 1878 the company ceased operations and sold its property to the E.S. and A. Bank Ltd. for £5000. The Balhannah Freehold Gold Mining Co. was formed in 1881 to work the mine for gold. Under manager F.C. Singleton, the mine was de-watered in 4.5 months and the lode sampled but again the mine was abandoned.

In October 1883, Moonta Mines Ltd. purchased the property for £2000, removed the boilers and machinery for use at Moonta, and resold the property to Mr. Hoyt of Melbourne in October, 1886, for £450.

A syndicate purchased the mine for £600 in 1894 and formed the New Balhannah Freehold Gold Mining Co. N.L. in 1899. H.Y.L. Brown, the Government Geologist, inspected the mine at this time and reported that the mine had been worked in an unsystematic and unskilful manner. Although he believed that the mine was still a valuable proposition, no mining was undertaken.

In 1935 Mr. H.E.C. McCarthy secured rights over the mine area and between 1935 and 1937 diamond drilling was carried out

Balhannah Mine, 1873

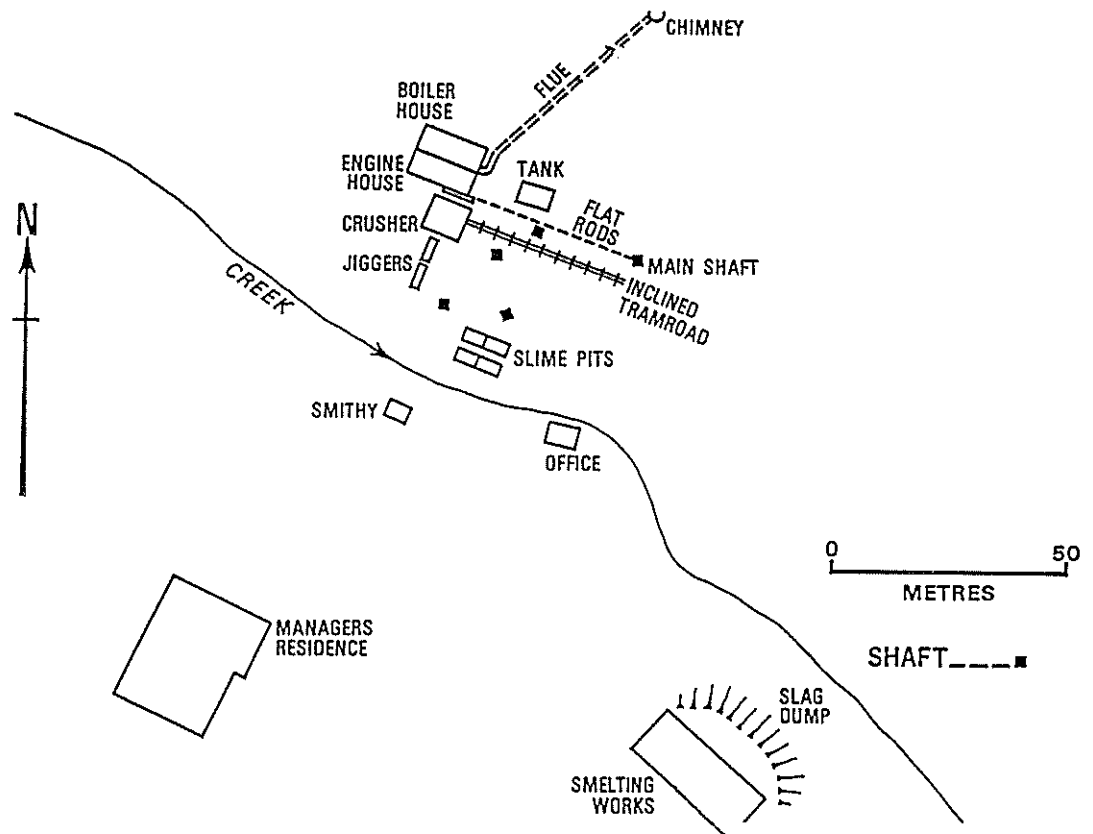

Balhannah Mine building, 1982, looking north. From left to right: crushing house, engine house, boiler house.

Grinding ore at Balhannah Mine, circa 1875

Figure 17 Plan of Grünthal Mine In 1873

by the Department of Mines. In 1948 McCarthy formed the Balhannah Mines N.L., dewatered the mine and carried out unsuccessful driving on the main lode. Further work was carried out by McCarthy in 1968.

### Grünthal Mine

A copper lode was discovered near the village of Grünthal in late 1869. The owners first worked the lode in January 1870 and 12 men were employed digging exploratory trenches and sinking a number of shafts.

The Grünthal Mining Company was formed in 1871 and a main shaft commenced. An increase in copper prices prompted the company to invest in extensive improvements to the property during 1872. These included:

- . large horizontal steam engine (about 56 cm diameter) to power pumps, winding gear and the crusher
- . 9.75m x 2.1m Cornish boiler connected by an underground flue to a stone and brick chimney
- . crusher, all housed in 3 large stone buildings
- . 2 large stone water tanks
- . jiggers for concentrating the crushed ore
- . smelting works with 3 brick chimneys 21m high
- . stables and outbuildings
- . manager's residence of 11 rooms.

The main engine shaft was extended and ore stoped from drives at the 33m and 67m levels.

The ore which assayed between 6 and 10% copper was hauled up an included tramway to the crusher house and then passed to jiggers to be dressed to about 14% copper, the residue passing to slime pits. The smelting works commenced operations in 1874 converting the concentrate into copper matte containing about 50% copper. This was carted to the Port Adelaide smelting works for refining and between October 1874 and May 1876, 416 tonnes of 50% matte valued at £15069 were sold. This would have been produced from about 2000 tonnes of ore.

The mine closed in 1876 due to a slump in copper prices. It was reworked in 1882 for gold by the Grünthal Gold Mining Company. In 1915 the mine was dewatered, inspected and sampled by the Department of Mines but no further work was carried out.

In 1935 the Grünthal Gold Mines Ltd. again dewatered the mine to assess its gold potential. Additional sampling by the Department of Mines indicated that further exploration of the lode from the present workings was not warranted.

### Gold Mining

#### Woodside Goldfield

The Woodside Goldfield located east of Woodside and extending from Oakbank to Mount Charles, has a recorded production of about 30000 oz. More than 23000 oz of this came from the three largest mines, Bird-In-Hand, New Era and Eureka.

In 1849 alluvial gold was found in the Onkaparinga River and its tributaries near Balhannah. The South Australian Gold Company and the Onkaparinga Gold Company were formed in 1850 and purchased land which they claimed contained payable gold, but both companies ceased operations in 1851. In the late 1860s further finds of alluvial gold were made near Balhannah.

**Figure 18** Layout of a typical Cornish crusher house, circa 1870, which was common in South Australia up to 1900. The crusher houses at Balhannah and Grünthal mines are the only intact examples remaining in Australia.

Broken ore was delivered to the first floor of the house and fed into the cast iron crushing rolls which revolved towards one another. Crushed material dropped into a rotating cylindrical sieve. Fine ore passed through and oversized ore discharged into a raff wheel and was returned to the rolls.

Figure 19 Plans of boiler/engine house and crusher, Grünthal Mine

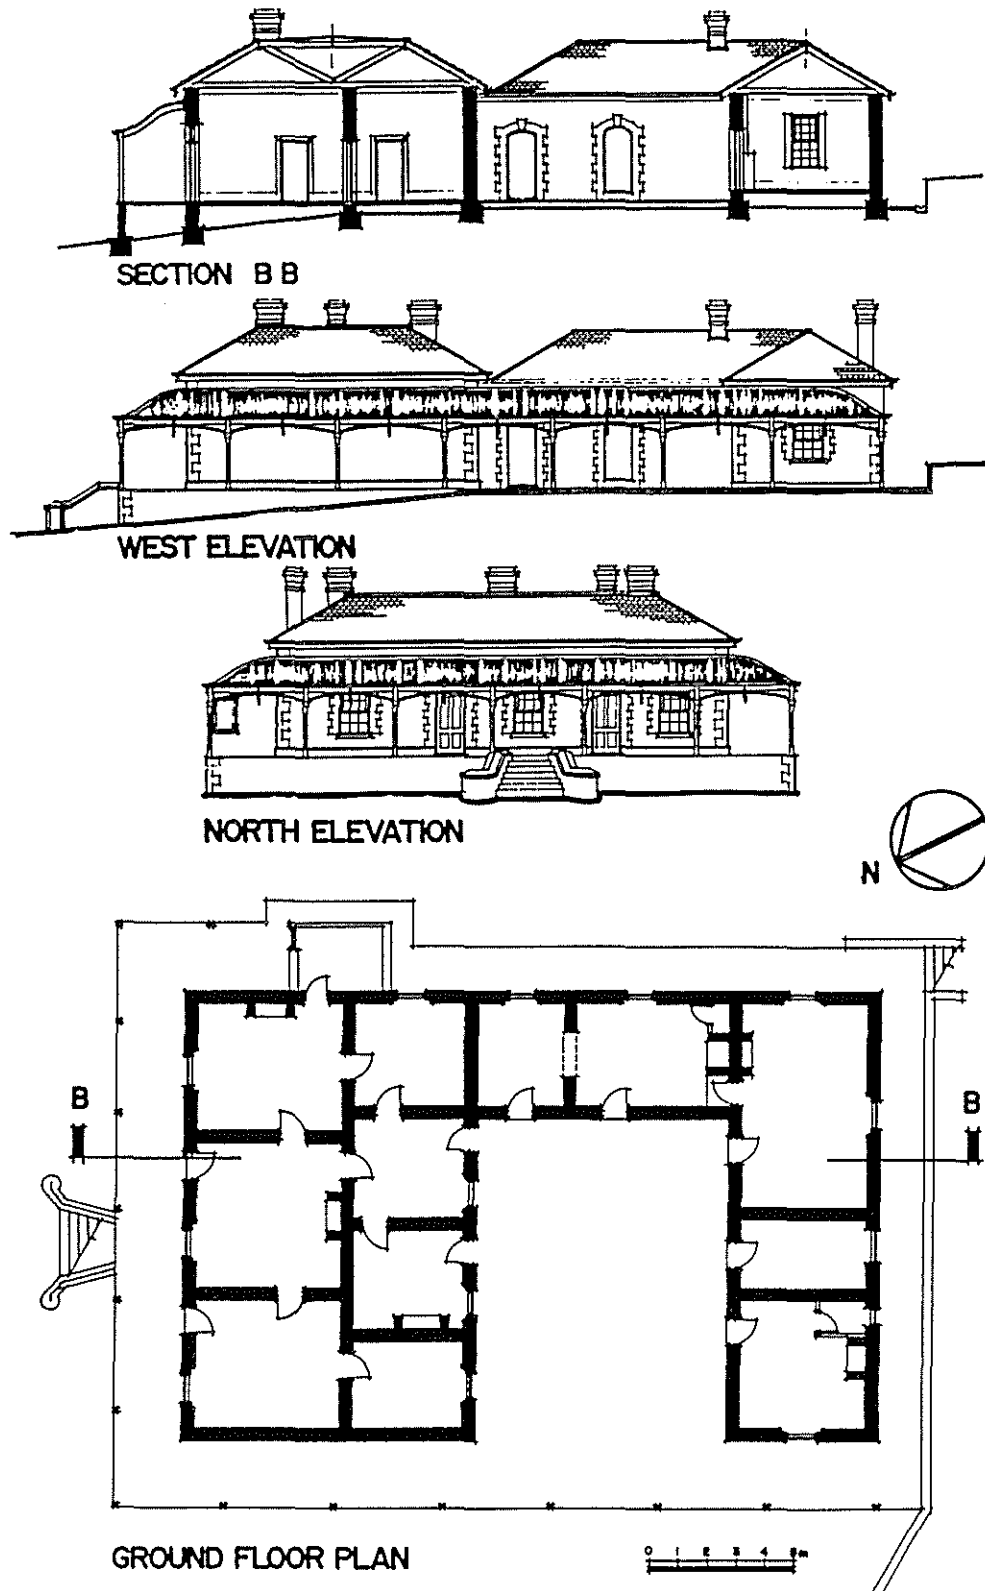

Figure 21 Nineteenth century mines near Lobethal and Woodside. Frame shows area of Woodside Goldfields.

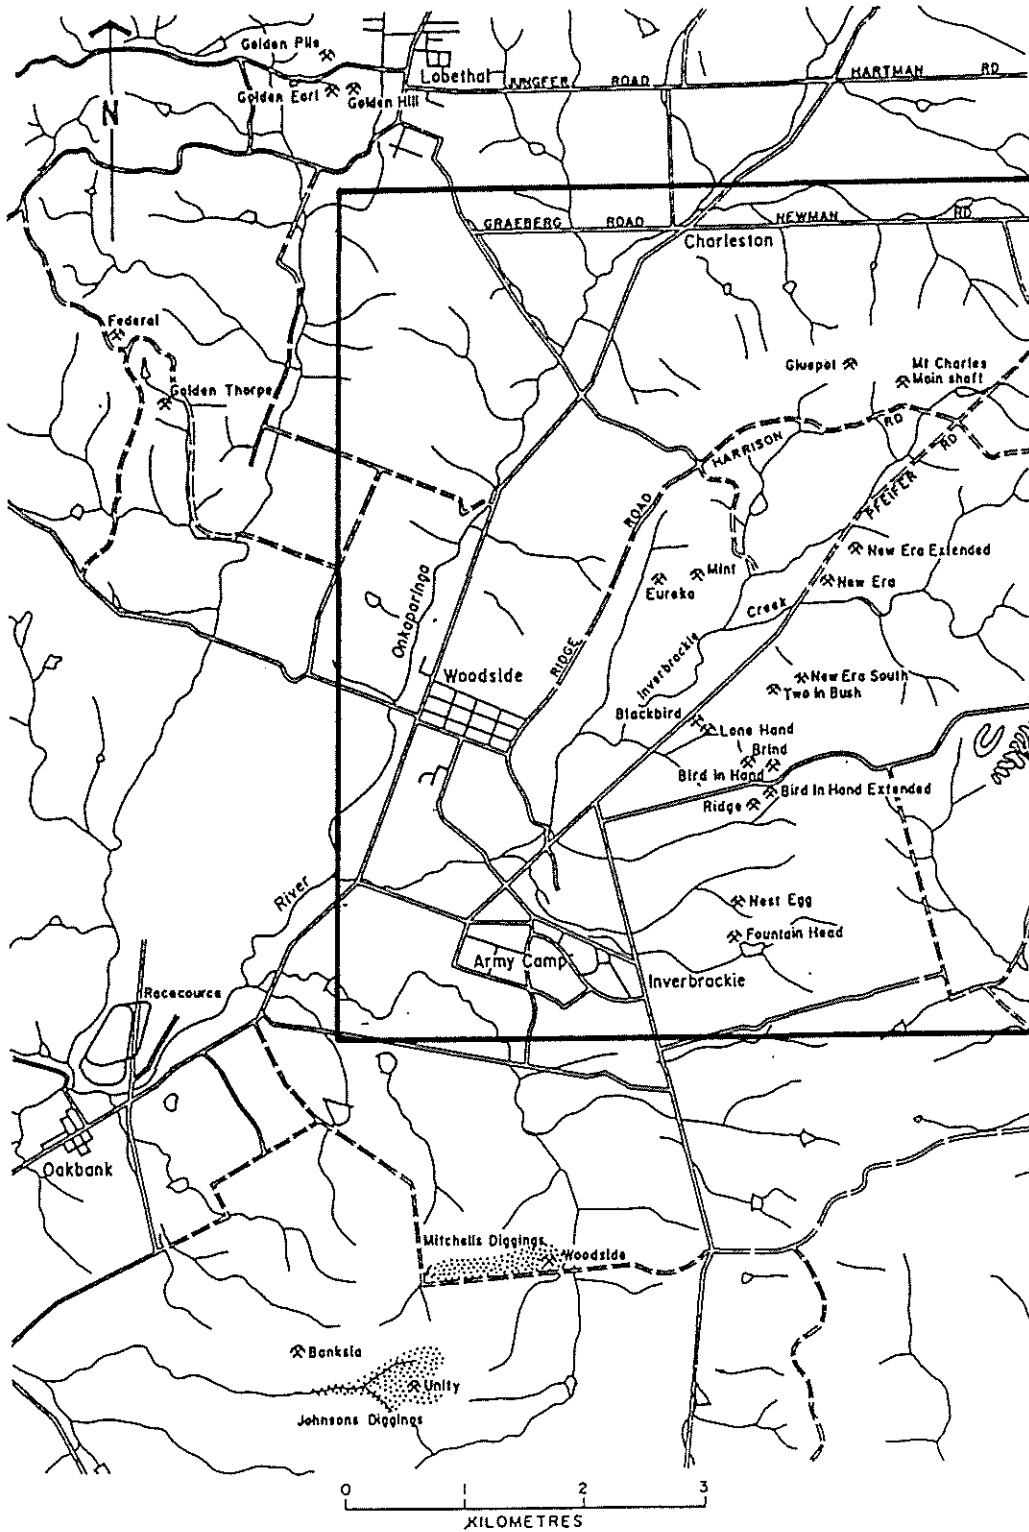

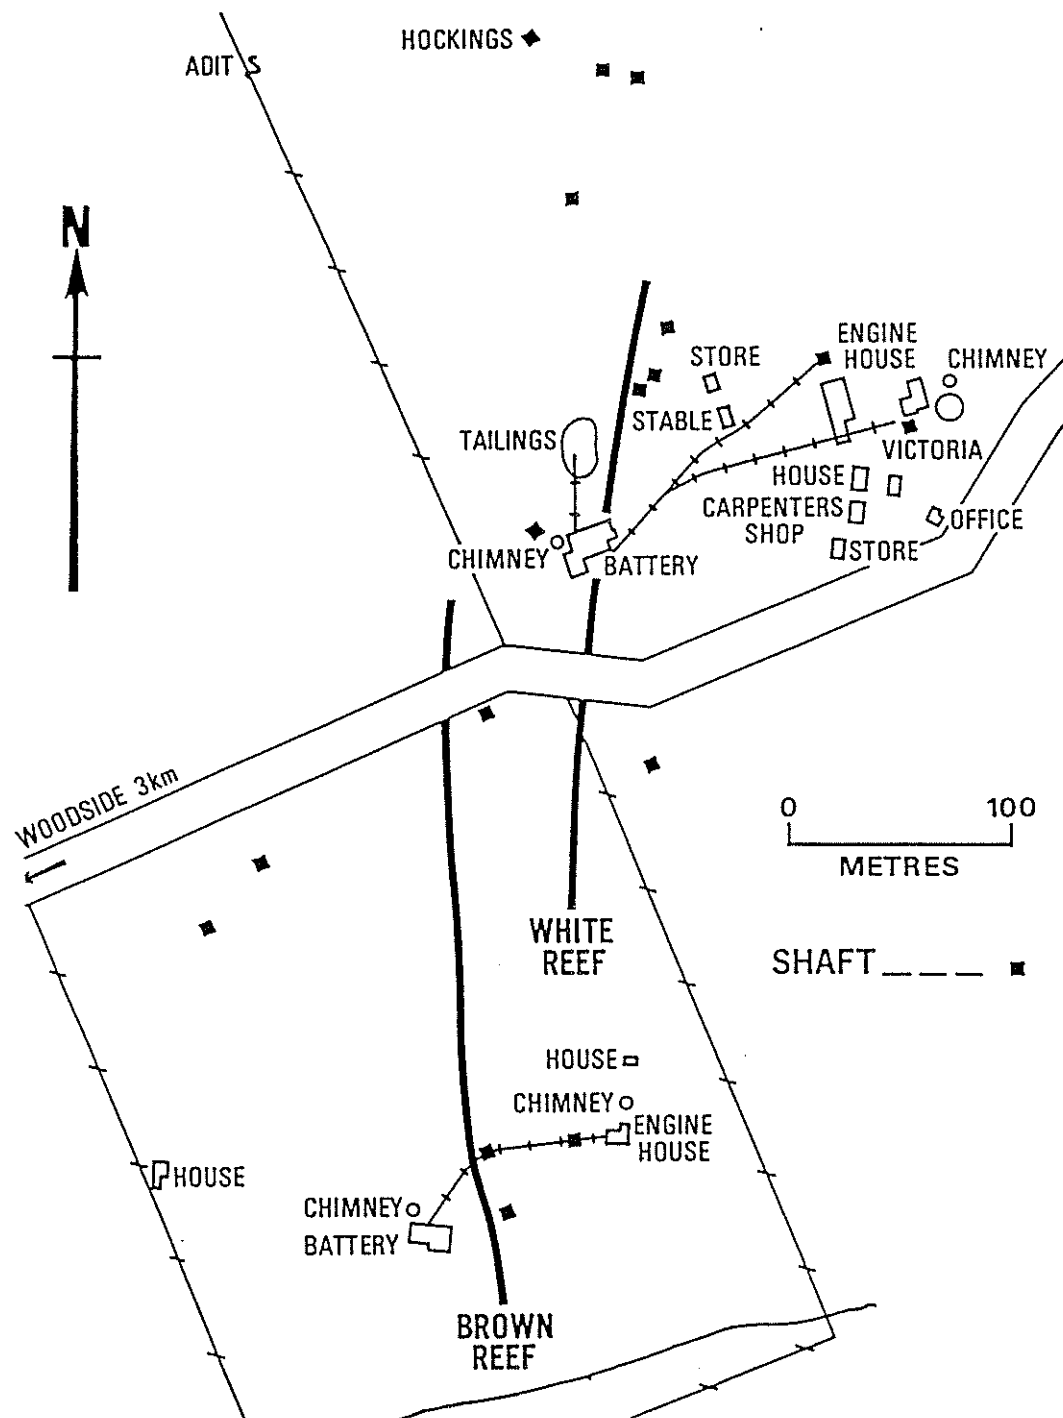

Figure 22 Plan of Bird-In-Hand Mines, Woodside Goldfield, circa 1880

In 1869, A. Mitchell discovered alluvial gold on his property near Woodside and yields of up to 3 oz of gold per ton of washdirt were recorded. By 1881 a reef was found on the property and attracted prospectors into the Woodside area.

Other alluvial areas were found within the next few years as well as a large number of reefs which were taken up by companies. Many of these were worked on a large scale between 1881 and 1899 and again in the 1930s. At the principal mines pumping and winding plants were installed, batteries erected and extensive underground workings developed. Due to the high sulphide content of the reefs, significant losses were experienced during treatment and consequently all tailings were cyanided in 1897.

Little remains of the Woodside Goldfield other than some of the workings and stone engine foundations. The only intact relics still remaining are the chimneys of the Ridge (1883), Lone Head (1885) and Nest Egg (1882) mines.

**Bird In Hand Mine:** this line of reefs extends for 4 km from Fountain Head northwards to the New Era Mine, the Bird In Hand being in the centre of the line.

The reef was discovered by Mr. D. McCracken, the first mine manager, in 1881 and an initial crushing of 12 tons yielded 22 oz gold. A company was formed with a nominal capital of 5000 £1 shares. The township of Reefton Heights was surveyed on the mine property and 1882 was spent in raising ore from shallow depths and erecting a 10 head battery. In late 1882 the original battery was sold and replaced by a new 20 head battery. Steam engines and winding plant were installed, housed in large buildings with tail stone and brick chimneys. Once the water level was reached difficulties were encountered as the small engine proved insufficient in draining the workings. In 1886 the company received a subsidy of £5000 from the Government and a 127 cm diameter Cornish beam pumping engine from the Bon Accord Mine at Burra was installed at a new main shaft (Victoria) to drain the mine workings.

In 1888 a brick lined drainage adit was driven and the Victoria Shaft was sunk to 107m. Difficulties in raising finance for development due to the Broken Hill silver boom led to closure in July 1889. The mine was purchased 18 months later by the Woodside Consolidated Gold Mining Co. N.L., dewatered and the workings restored and extended. In 1897 the MacArthur-Forrest Company cyanided all old tailings dumps at Woodside and produced more than £9000 worth of gold. The mine was subsequently used as a water supply by the Commonwealth Government until 1933 when it was reopened by Bird in Hand Gold Mines N.L. The workings were again dewatered, cleared and restored and further extended. The company was wound up in July 1935 but the mine was worked by tributers from shallow surface shafts until 1938. The 27m stack of the mine was demolished in 1957. Total production amounted to 10500 oz from 22760 tons of ore.

**New Era Mine:** gold was discovered at this site in 1884 by a prospector called Edwards and the New Era G.M. Co. was formed

**Figure 24** Plan of proposed township of Reefton Heights, circa 1881. The influx of miners into the Woodside area at this time prompted this proposed housing subdivision. Because of the eventual failure of the Bird-in-Hand Mine, the scheme never came to fruition. However, a small group of miners' cottages was built in Woodside (see plans over).

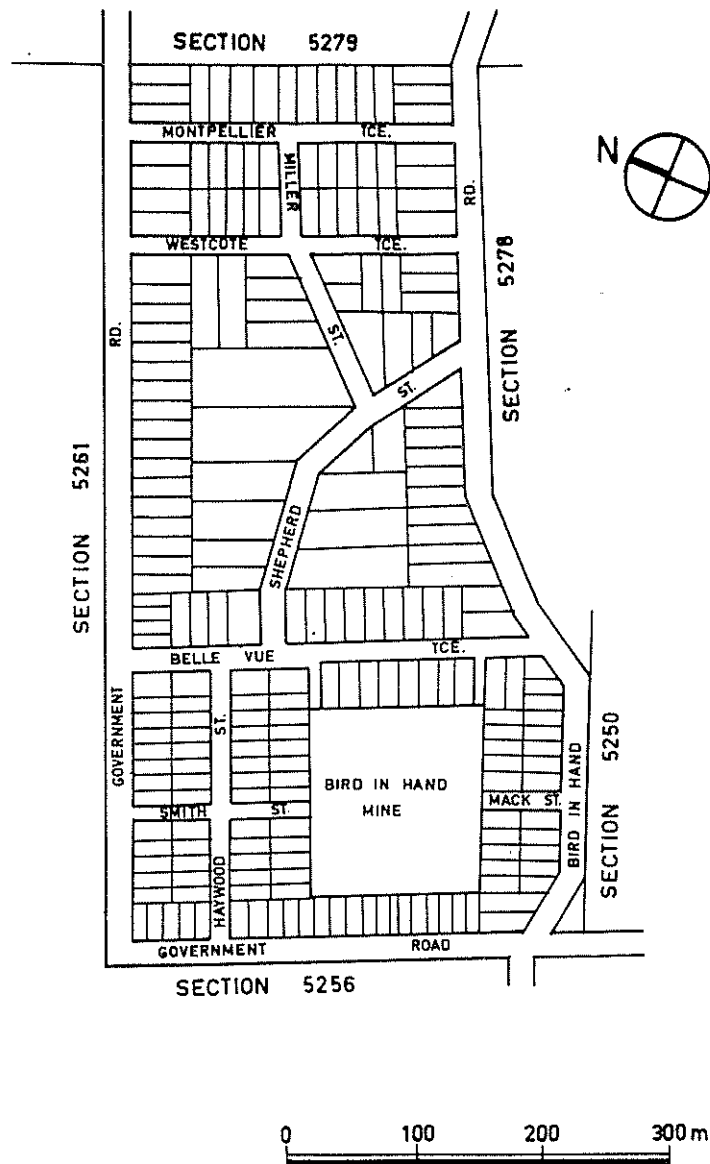

Figure 25 Terraces houses, Moffat Street Woodside

to work the deposit. Several underlie shafts and an engine shaft were sunk and a crushing of 28 t yielded 240 oz gold. A large plant was erected including 2 batteries of 12 head and 10 head, 2 winding plants, large boilers, horizontal steam engines and pumps. A great deal of work was done and extensive underground workings were excavated. Huts were erected for the men employed and all the machinery was enclosed in buildings. Depletion of reserves, lowering of ore values in depth and the cutting off of the lodes by a diorite intrusion at depth led to the company liquidating in 1889 after producing about 7000 oz of gold. The mine was reworked by a syndicate in 1895 and about 800 t of ore was raised and treated at the Mount Torrens Government Battery. Tributers worked the mine in 1896 and several hundred tonnes of ore were raised and treated. The following year the tailings heaps were cyanided. The mine was worked by prospectors and small syndicates between 1932 and 1940.

**Eureka Mine:** was opened in September 1884 when the Eureka G.M. Co. was formed to work the discovery. Pumps, winding plant and a 10 head stamp battery were erected. The large quantity of sulphide ores present caused difficulties with amalgamation and trial parcels were treated in Germany and Victoria in an endeavour to find a satisfactory method of extracting the gold. The company found no satisfactory answer to the problem and work was stopped in April 1887 but was resumed early in the following year. An Adelaide syndicate reworked the mine in 1894, mostly by treating surface dumps and in 1897 MacArthur-Forrest Company treated the tailings at the mine. The mine was reworked in 1916-17, 1933 by Latter and by the Great Northern Eureka Syndicate and others to 1934. A little work was done in 1936 and in 1937-38, the surface dumps were reworked and a little prospecting was done. Prudential Securities Ltd. dewatered the mine in 1939, installed a new plant and pumps after which Eureka Gold Mine Ltd. worked the mine up to the end of 1941. Total production was about 4500 oz from 8400 tons of ore.

**Ridge Mine:** initial operations commenced in May, 1882, with an adit driven into the hill, an underlie shaft sunk and a 5 head stamp battery erected. Because of the sulphide nature of the ore 2 roasting furnaces were erected and a new battery and plant were installed. A great deal of work was done between 1882 and 1885 but due to unsatisfactory results the company let the property to tributers in 1886 who carried out work above water level.

The company resumed operations in 1887 and the underlie shaft was extended and levels and stopes were put in. An English Company purchased this mine along with the Bird In Hand and Bird In Hand Extended in 1890 but only prospecting work was done at the Ridge. Due to failing finances the company was reconstructed in 1892 and in 1897 the tailings from the Ridge were treated at the Bird In Hand cyanide plant. Total production amounted to about 1500 oz.

**Two in the Bush Mine:** the gold reef was discovered early in 1882 by Mr. McCracken and the Two in the Bush Gold Mining Co. was formed. A 10 head battery was installed but crushings were mostly poor. Due to lack of capital, work was suspended for about 4 months in 1883 but when resumed a second engine with pumps was installed and the main shaft was continued to 81m. Work was again suspended in 1886 due to a heavy inflow of water and the poor quality of ore being raised. The mine was re-opened for 3 months in 1888. In 1897 the tailings were treated by MacArthur-Forrest Company. During 1934-35 the property was held by the Bird In Hand G.M. Co. and 4 prospecting shafts were sunk but results proved poor and the mine was abandoned. It was reworked in 1936 but the lode again proved poor. Total recorded production was about 450 oz.

**Lone Hand Mine:** was opened in 1884 by Godfrey Egremont when some auriferous veins were cut in costeans (exploratory trenches). The Lone Hand Company was formed to work the claims and a main shaft was sunk on a well defined reef carrying rich gold values. Development of the mine included pumps, a battery, retort, 2 furnaces and a stone chimney but the influx of water proved too great for the pumps to handle. Work ceased in the latter part of 1885.

**Nest Egg Mine:** opened in 1882, machinery was installed, buildings erected and a flue constructed 30m up the hill from the boiler house to a stone and brick chimney 9m high. A new pumping plant was added in February 1883 and a little more underground development was carried out before the inflow of water again exceeded the capacity of the pumping plant. Various additions were made to the plant in 1884 but still proved unsuccessful in controlling the water and in August 1884 the company ceased operations and sold the mine and machinery.

**Woodside Mine:** the Woodside Gold Mining Co. (formed by Sir Thomas Elder, John Colton, Mr. Barr Smith and others), took out a claim on Mitchell's and Avery's properties, covering 100 acres. The first work was done at Mitchell's workings and some rich specimens were found. A large amount of work was then carried out in shaft sinking, driving and crosscutting in a small area but with poor results. A great deal of work was done on a reef on Avery's land also with poor results. The company then carried out prospecting on several adjoining properties, including the Trough section, and on Halstead's, Johnston's, James' and Lorimer's properties, but no gold was found. The company ceased operations in December, 1882.

**Banksia Mine:** the discovery of reefs at this location came as a result of alluvial mining on Johnston's property near Oakbank in 1882 which quickly led to the search for reefs, several of which were found on this and adjoining sections. Work commenced early in 1884 on the Banksia claim under Captain Bennett. Work ceased later in the year but was resumed in 1885 when gold bearing reefs were found over a large area around the original workings. Work ceased in 1886 but was recommenced on

Battery chimney, Lone Hand Mine, 1983

Battery chimney, Ridge Mine, 1983

a more extensive scale in 1889 by the New Banksia G.M. Syndicate. Following a poor crushing in 1890 work was suspended. The mine was reopened in 1895 and worked intermittently to 1907, during which time 223 tons of ore was treated for a yield of 180 oz of gold. In 1933 the mine was once more reopened and 5 men were employed, but work ceased in 1934. In 1936 the mine was again taken up, the old main shaft was cleaned out and a series of new shafts were sunk, but closed in 1938.

**Blackbird Mine:** the area was first prospected in 1885 by the Lone Hand G.M. Co. In 1934 the Blackbird Gold Mine was opened on the north side of the former site. In the first year, three shafts were sunk and an electric hoisting winch, pump, air compressor and rock drills were installed. Over the next few years a large amount of work was done in sinking shafts and winzes and in driving levels and crosscuts. Stopes were put in on the reefs and about 1500 tons of ore was raised yielding 733 oz of gold.

**Mount Charles Area:** a quartz reef on Mt. Charles was first prospected in 1884. In 1887 and 1888 the Mt. Charles Gold Mining Co. worked the mine and installed a steam engine and pumping machinery. The area was reworked between 1931 and 1938 on many separate claims, the most successful being Gluepot which recorded 575 oz from 752 tons of ore.

#### Forest Range Goldfield

The field, located to the northwest of Forest Range has a total production of about 6000 oz.

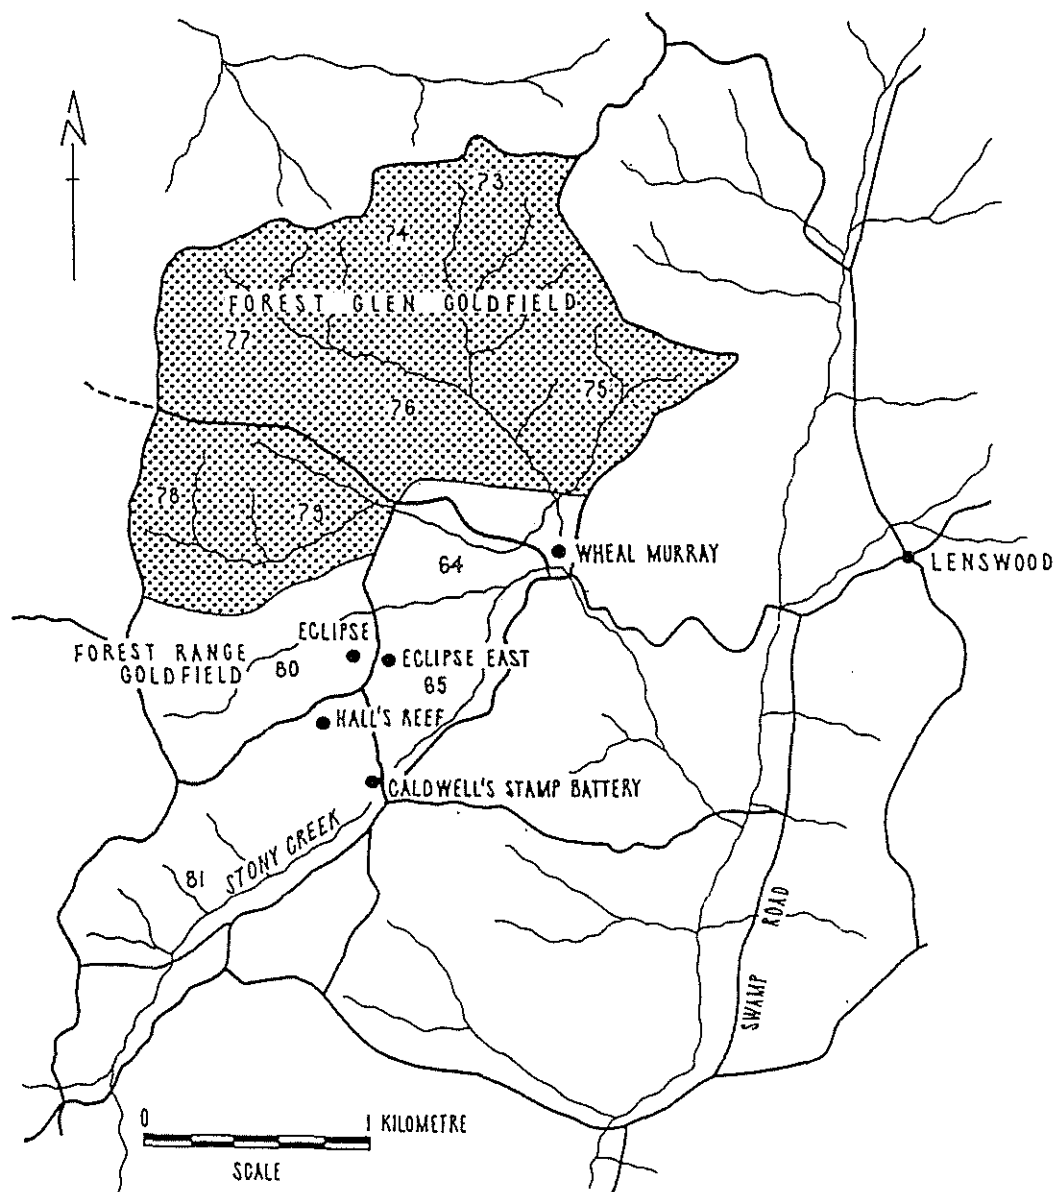

Gold was discovered in 1854 in Stony Creek by Biggs, Mason and Norton who washed 20 oz of gold from 2 loads of washdirt. A rush involving more than 200 men took place in 1855 along the alluvial flats of the creek and many small nuggets were reported but the majority of the claims gave poor results and the area was abandoned by 1856. Intermittent prospecting was carried out over the next 30 years.

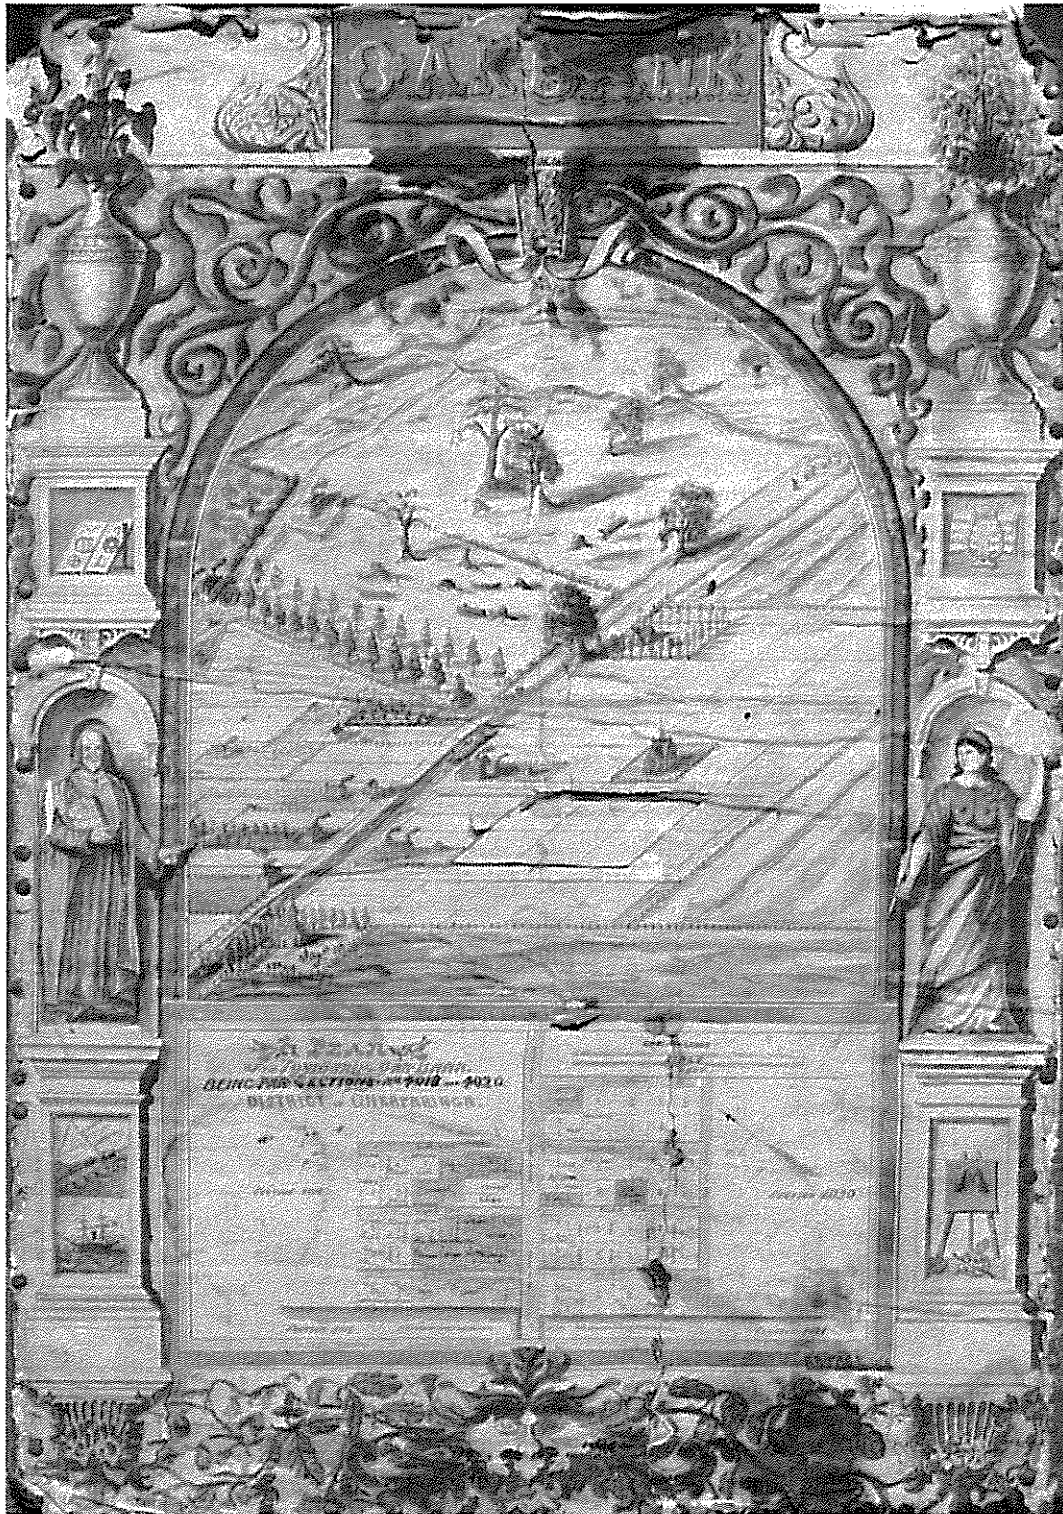

**Eclipse Mine:** a reef containing gold and bismuth was discovered in 1870 by Captain Terrell. Following encouraging assays from a shaft sunk on the reef a 5 head stamp battery was erected and about 100 tons of ore were raised, but operations ceased in December 1871.

A new rush attracting 600 men took place in early 1887 following the discovery of a rich alluvial gutter on the hillsides adjacent Stony Creek. The new discoveries were made on the freehold land of Messrs. Boehm and Love, who owned the mineral rights and allowed the men to prospect for the weekly rental of 2 shillings and 6 pence per week. About 80 to 100 oz per week were purchased by the bank and many nuggets, including one weighing 48 oz, were recovered. However, the majority of diggers were unsuccessful and by late 1887 only about 100 diggers remained in the field.

Figure 26 Plan of Forest Range Goldfield

**Figure 27** Plan of Oakbank, circa 1864. Oakbank was designed as a private township the first portion of which was laid out in 1850-51. The 'idealised' plan opposite was drawn by R R Page, the architect for the new St Thomas Church, Balhannah, built in 1865.

**Forest Range Gold Mining Company:** carried out operations from 1887 to 1889 on Love's property, which included the Eclipse Mine. Eighteen men were employed, and the old working of the Eclipse Mine extended and the alluvial material tested, but results again proved unsatisfactory.

In 1889 J. Bowen discovered gold on Mr. Price Maurice's land about 1 km north of the Forest Range diggings. In November 1889 a petition signed by 73 diggers and settlers in the district was made to the Government for the property to be proclaimed a goldfield under the Mining on Private Property Act of 1888. This act enabled private property to be dealt with by the Government as Crown Lands in relationship to mineral regulations.

The land was examined by Mr. Rosewarne, Inspector of Mines, in late 1889 who recommended that it be declared an alluvial goldfield, the first to be declared under the new act. Six months notice was given to Price Maurice of the Government's intention to resume the land unless he mined it, under the terms of the Act. As it had not been worked by July 1890, the Government then prepared to proclaim it, and several weeks before the intended opening of the new field, named Forest Glen, 130 miners were camped outside the grounds.

The field was opened at 12.00 p.m., July 17, 1890 when a red flag was hoisted by the Warden of Goldfields and the order of pegging decided by lot, each man being allowed 2 minutes to select and peg his claim. The licences cost 20 shillings, of which 2 shillings went to the land owner, and by the middle of the afternoon there were about 1000 people on the field and 246 licences had been taken out.

The Forest Glen diggings proved to be disappointing although a few rich patches were worked and by mid August 1890 most of the diggers had moved back to the old diggings at Forest Range, where a number remained until 1899. Both the Forest Range and Forest Glen Fields were reworked in the 1930s depression years.

#### Lobethal Goldfield

The total recorded production of the Lobethal Goldfield amounts to over 400 oz.

During the early days of the colony, gold was found from time to time near Lobethal but there was no serious mining until the 1880s when alluvial and reef mining commenced on the western side of town. Some rich patches were struck and a number of reef mines were worked intermittently up to 1900, the most significant being Golden Hill. Small alluvial operations took place at intervals up to 1931 when an alluvial patch was discovered near Golden Hill. The ensuing rush extended over 4 km. Most of the claims yielded small amounts of gold but from time to time some rich, but isolated patches were struck. A number of reefs were also worked, but only one mine proved payable and all work ceased within a few years.

Federal and Golden Thorpe mines, southwest of the main area were opened in the 1890s and were worked intermittently up to 1936 from a series of shafts and adits.

## CHAPTER 9

The Brewing Industry: Profile of the Activities of  
the Johnston Brothers and Pikes

Deborah Jordan

The dream of a middle-class paradise in the southern continent sustained a lot of the early settlers pioneering in South Australia. In embarking for unknown lands, many of these enterprising and energetic immigrants responded to the calls of the utopian founders in their hopes to establish a new society. After the Industrial Revolution in Britain, with the adoption of new tools and the application of new techniques in both industry and agriculture, nature was no longer seen as an omnipotent force and co-operation between it and people was believed possible and desirable. Just as it was hoped that the means of production could be altered it was also believed that the deep class divisions between aristocratic and worker in English society could be gulfed and people's lives transformed through the empowerment of a middling class - the factory owner who was also public benefactor.<sup>1</sup> The influence of the French Revolution with the cry for 'liberty, equality and fraternity' was seeping through English society and taken up by reformers, like the utilitarian Jeremy Bentham with his doctrine of the greatest happiness for the greatest numbers; and much later taken up by William Morris who, in rejecting the corruption imposed by the cash-nexus viewed the worker as potentially a creator and artist with pride in his or her work. The Johnston family were just one group of settlers who held these ideals and in their plans for a new and freer English 'manufacturing village'<sup>2</sup> at Oakbank (and later Woodside) combined the sound economic acumen of the middle class with some of the idealism of the utopian dreamers.

William (1789-1853) and his wife Janet Johnston nee Love (1789-1848) with their seven children, arrived at Holdfast Bay in 1839. The family lived at Willunga for their first year. Early in 1840 they moved to the Onkaparinga Valley, attracted no doubt by the river that ran through their section. Formerly a cabinet maker in Campbelltown in Scotland and son of a shipmaster, William Johnston also had a background as a distiller.<sup>3</sup> By 1841 they had 5 acres under wheat, 2 acres under potatoes, fenced off 11 acres and were living in a pisé house.<sup>4</sup> In the harvest season William with the help of his sons James (1818-1891) and Andrew (1827-1886) began to brew beer which became well known, and the 'talk' of the countryside.

The Johnston's brewery was not the first established in the district. In the very early days many publicans of necessity brewed their own beer and, because of the importance of the pub as both a place of refreshment for travellers and a focal point for the community, it was often the first permanent building.

The earliest hotel in the area was the Balhannah Inn, owned by James Turnbull Thomson, idiosyncratic founder of the private township of Balhannah in 1840. He built the hotel soon after

### Dalntober House, Oakbank

This is a lively rendering of an Italianate villa whose elevated position would have once given it extensive views of the Onkaparinga Valley. The main approach to the house is by way of a curving driveway opening up to view the house set in a beautiful English garden.

The elaborately planned wings of the house include a large bay window with canopied first floor balcony over. The ironworks to this balcony and the western verandahs were imported from Walter McFarlane's Saracen Factory, Glasgow.

the subdivision took place, letting it. But the tenant departed after a year and Thomson was left, unwillingly, to run the house himself. He established his own brewery, making his malt from wheat. The first beer was made in August, 1843 and in his diary he recorded advice from both W. Milne and W. Johnston.<sup>5</sup> Later he tried whiskey.

With the success of the early brewing at Balhannah Inn further requests came to the Johnstons; the hotel keeper at Mt. Barker, for instance, required beer, otherwise his customers would go all the way to Balhannah for the Johnston blend. Then the Nairne publican followed with requests and soon, writes an early commentator, 'also other places in the district'.<sup>6</sup> William Johnston brewed a quarter of a cask of beer, put it on a dray drawn by 2 bullocks and carted it to Hahndorf to sell. Finally the Johnston family began brewing in earnest and in 1843 when the Oakbank Brewery was founded William and his two sons, James and Andrew Galbraith needed twelve bullocks to take their beer to their customers.

During these early years of settlement the various members of the Johnston family established themselves as large land-holders and owners of substantial residences (Figures 29-34). They owned the 240 acres around the brewery and a further 2,000 acres in the neighbourhood, besides later renting the aboriginal reserve. They laid out the township of Oakbank, named after the Works in Glasgow and urged some of the workers from their home town in Scotland to emigrate to work in the brewery and live in their houses (Figure 28). In its beginnings Oakbank was a Company town - the houses and streets owned by the Johnstons.<sup>7</sup> One early commentator recorded that there was 'something almost patriarchal in the relations of the firm to the surrounding country and its residents...and their prosperity is strongly identified with that of the settlers.'<sup>8</sup> The brewing industry was hence vital to the nature, origins and character of Oakbank, the legacy of the Johnstons is even seen in the naming of the streets after members of the family.

In 1850 James Johnston bought the section of land which he later subdivided to form the private township of Woodside (Figure 45). The first permanent building, constructed that year, was the Woodside Inn, with Frederick Duffield as the first of a series of licencees.<sup>9</sup> James was active in local council government when the Onkaparinga District Council was formed and also in the religious affairs of the district, notably with the Inverbrackie Church. There some of his quixotic idealism was evident, for when the first minister, the Reverend J. McBean absconded with substantial funds, James was prepared to repay the money to the church himself.<sup>10</sup> In 1853 with the death of William Johnston the flourishing brewery came under the control of the partnership of the two brothers J. Johnston and A.G. Johnston. By 1864 some of the Johnston family's vision in Oakbank was illustrated by a plan of the township with its plans for churches, schools and other buildings, its scrolls of oakleaves and decorative figures suggesting artistic and cultural endeavours (Figure 27).<sup>11</sup>

The Oakbank Brewery was ideally situated. Below river

level was a clear, clean fresh supply of water fed by springs, in the substantial volume needed for the brewing process. The beer brewed was especially fine because of the good water: 'not a single ounce of preparation being used in treating it, or as preservative in the finished article; it is almost unique amongst Australian Waters.'<sup>12</sup> Water was pumped from a fourteen foot well - and later two further wells.

In 1868 eight men were employed regularly with extra hands taken on during the Summer months. Most of the mechanical work was done by horsepower and the brewery stabled eight horses. Using traditional English production methods as little barley was grown in the district, imported English malt was used.

During the latter part of the 19th century, with increased scientific and technical knowledge there was a general change from home to commercial brewing, in the state.<sup>13</sup> Numerous smaller concerns were amalgamated - Thomsons' brewery at Balhannah operated briefly again from 1855, (after his interlude in London, for eleven years, having left in debt) and then disappears from the records. J. Johnston and A.G. Johnston purchased the equipment from F.W. Kleinschmidt's Lobethal brewery, operating since 1851, when he closed it in 1869 and commenced growing hops. In 1874 James Johnston purchased an interest in the Lion Brewery from W.J. Bailey, in partnership with W.H. Beaglehole originally only producing draught beer for use in its chain of hotels.<sup>14</sup> The same year James Johnston in conjunction with Simpson and Beaglehole founded a brewery at Broken Hill. In 1878, the Johnston Brothers purchased Gray's interest in the Littlehampton Brewery in partnership with Hunt (a firm which had been operating since 1850, and continued until the early 1900s).

By the early 1890s Oakbank Brewery was a flourishing concern, manufacturing beer, stout, aerated water, cordials and non-alcoholic beverages of all descriptions. Substantial improvements had been made to the brewery with a new brew house, and a brew tower. In 1891 they were brewing ale especially intended for bottling, providing employment for two men and a boy. Tasmanian and locally grown hops at Woodside were used and Mauritius sugar - that other important ingredient. Trade extended far and wide - east as far as Callington, south to Strathalbyn and north to Mount Pleasant, and there were 19 horses in the stables to handle the distribution. The brewery supplied the annual Onkaparinga races for Andrew Galbraith Johnston, an enthusiastic sportsman, and one of the original committee members of the Onkaparinga Racing Club when it was formed in 1874. The land was leased from the Johnstons (until 1938) and the brewery wagon, still stabled at Oakbank, was used by Dr. Esau as a judge's stand, in the first races.<sup>15</sup>

Forty years after the inception of the Oakbank Brewery another young brewer arrived in the Onkaparinga valley and saw the possibilities for further openings. Henry Pike (1837-1904) had arrived from England in 1878 with his parents and moved to Oakbank in the early 1880's to continue his trade as a carpenter, joiner and undertaker. For a while he worked for the Johnstons as a carpenter. Like the Johnstons, Henry Pike began to brew in a small way. His mother, one of the few women

A re-created setting for Johnston's Brewery. The introduction of a reflecting pool in front of the existing premises would enhance an already beautiful setting.

appearing in the world of brewing, had taught him the trade. At first he brewed only five gallons, selling it from a horse-drawn cart; he soon increased the quantity using a primitive vat - later the business began to expand rapidly.<sup>16</sup> In 1886 with his son, Walter H. Pike (1868-1931) and a son-in-law Ernest Albert Beasley, he established the Dorset Brewery under the firm name of Pike, Son and Beasley. In 1910 it was changed to H. Pike and Co. The brewery manufactured aerated waters, tonic ales as well as alcoholic beverages; by the late 1880s ten hands besides the three principals were employed and in its hey-day Pike's brewery employed a staff of twenty five in the Summer and about twenty in the Winter, who felled timber for the boilers and in the slack season they too, like the Johnstons, bred and reared sheep, grew potatoes, raised pigs and cured bacon, on the property acquired in and around Oakbank.<sup>17</sup> There the family owned five houses. And just as J. Johnston's and A.G. Johnston's interests had spread further afield than their business at Oakbank, H. Pike and Co. owned a succession of hotels.<sup>18</sup> They built the hotel at Oakbank and in 1913 purchased the Forest Range Hotel, just two of their 12 country pubs. They bought a hotel in Currie Street in Adelaide and also had a storage office and property there, to which four cottages were attached. They acquired a fleet of lorries to travel between Oakbank and the City.

And so too, just as the Oakbank brewery was essentially a family business the thriving progeny of the Pikes were called upon to work in the business, H. Pike having four sons and three daughters. When he died in 1904, Walter Pike took over the management and Henry junior (1904-1969) who had been managing the city depot was brought up to help his father - as chauffeur, gardener and general factotum. And he 'hated it!'<sup>19</sup>

The latter part of the 19th century marked the government's increased involvement in the brewing industry and liquor trade, using revenue from the 1894 Excise Act taxing beer, to demand stringent paperwork. With the expansion of certain breweries controlling interest in the hotels 'tied' to take whatever brew the brewer wanted supply, there was a public outcry. A committee was set up to investigate the quality of beer and a Public House Monopolies Prevention Bill brought before Parliament although the matter was left largely unresolved.<sup>20</sup>

In 1902 a Commonwealth law decreed the need for a license and brewers were forced to make a milder brew. The number of breweries continued to decline as the monopolies strengthened.

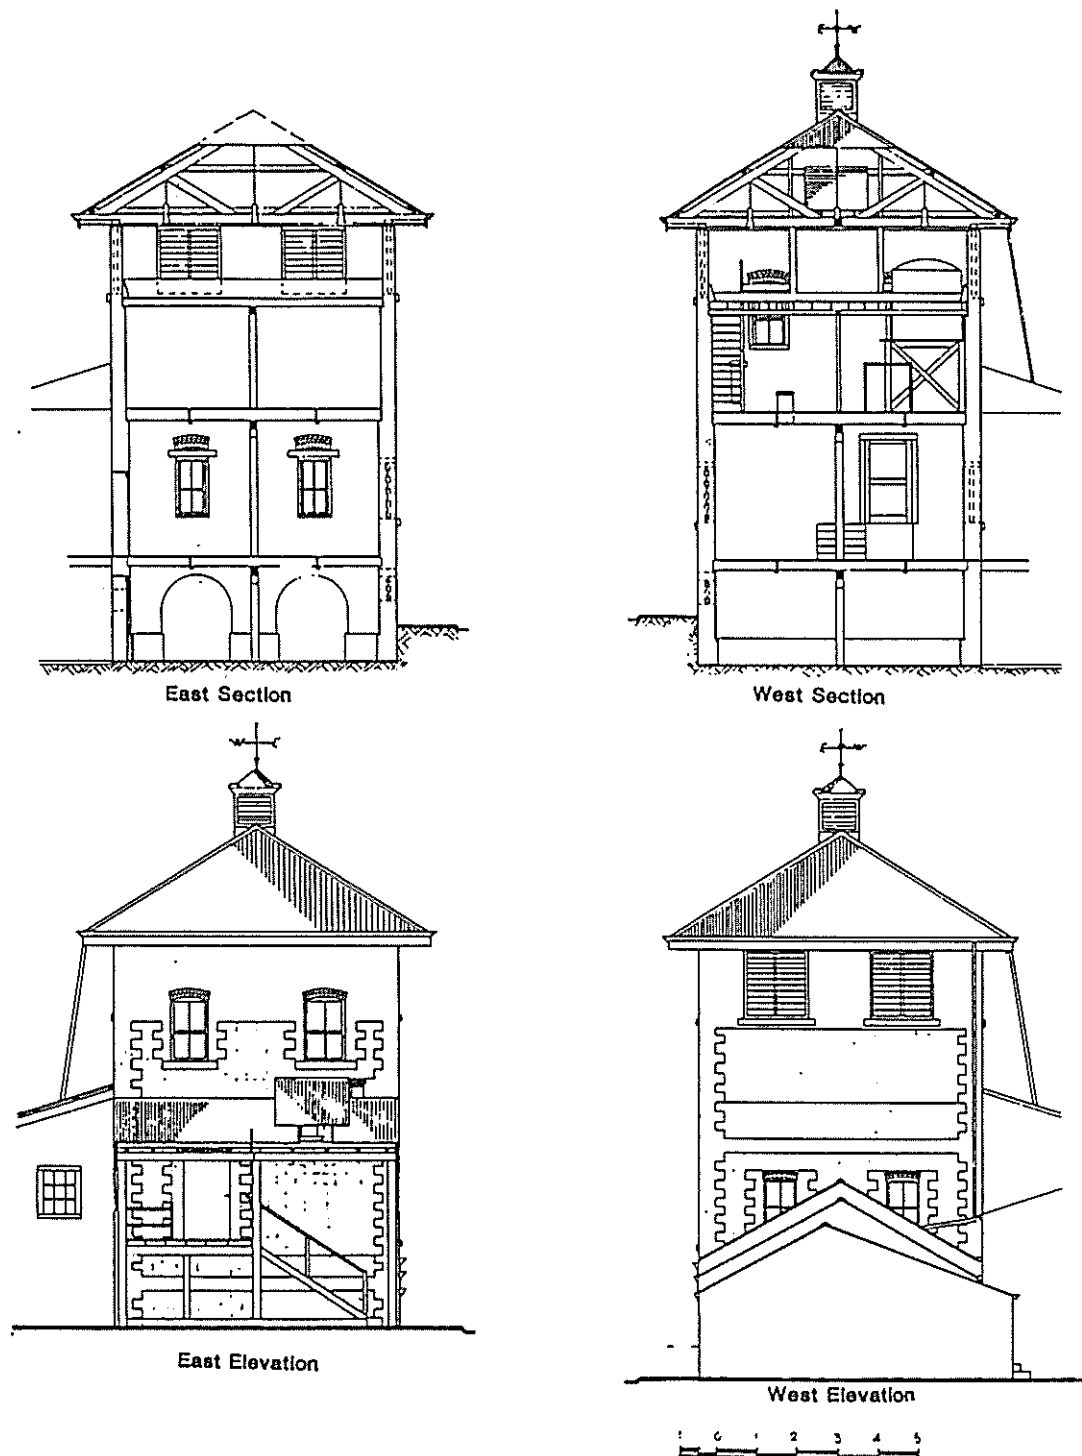

But Johnston's and Pike's breweries were large enough to flourish. In 1901 Johnston's brewery became a liability company to formalise the business relationships within the family and in 1902 with increased general trade, particularly in bottled beer they continued to expand, building a grain and bottle store. Both companies were manufacturing aerated waters and Pike's tonic was in great demand, to such an extent it was difficult to keep up supply. By 1908 J. and A.G. Johnston Limited owned twenty pubs, and in 1910 Pikes had become H. Pike and Co.

Some of the dreams of the early Johnston forbears for a

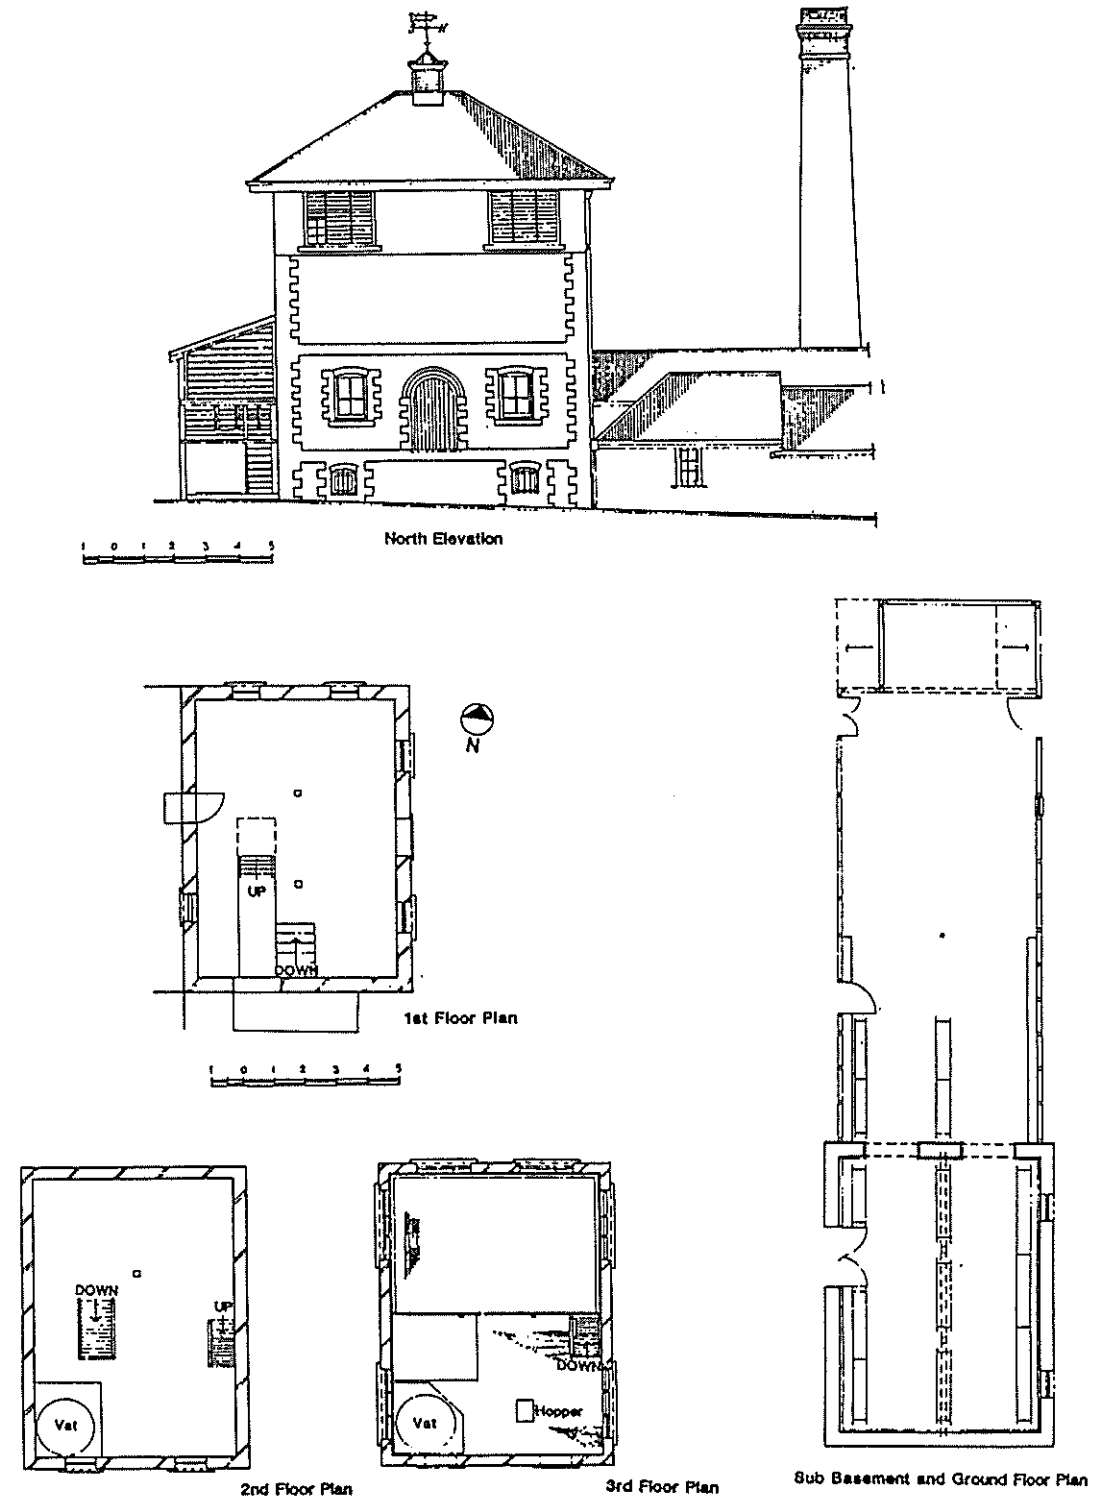

Pike's Dorset Brewery, Oakbank, an early post-war aerial view

Figure 35 Plans, sections and elevations of brewing tower, Pike's Dorset Brewery, Oakbank

**Figure 35 continued** Plans, sections and elevations of brewing tower, Pike's Dorset Brewery, Oakbank

middle class paradise had been realised, for Oakbank was a thriving manufacturing village, complete with services. Adopting a policy of benevolence, the Johnstons had made houses available for sale to employees and some cattle and land.<sup>21</sup> One early commentator has written how there was 'good feeling' existing between employer and employee,<sup>22</sup> but what exactly was the nature of the relationship between boss and worker? A striking recorded characteristic of both the Oakbank and Dorset breweries was the length and loyalty of services to the respective companies which appears to have operated right through from the Directors themselves to the lowliest boy who began work as a stablehand.<sup>23</sup> Throughout the Johnston company's history there have been only three chairpersons (John Disher Johnston 1907-1916, William Galbraith Johnston 1916-1944 and from 1944 Alexander Hammond Johnston) and secretaries (Mr. McMillan 1901-1905, Leo O'Leary 1905-1958 and his son Bryan O'Leary from 1958). Francis Lampe filled the position of brewer for thirty three years out of a total of 40 spent in the firm and three other workers are remembered for giving fifty years continuous service.<sup>24</sup> But loyalty to one's employer is only part of industrial relations and today we might ask what work is for, who owns what we produce, where profits come from, how were the decisions made, and what opportunities were offered to some of the different cultural groups living in the area?<sup>25</sup> The only employment prospects available to women and girls were as servants in the Johnston mansions or with local farmers or business people. Loyalty to the employers is not indicated in the numerous succession of licenses to both companies' hotels.

Certainly some of the early Johnston family - and the Pikes combined aspects of the roles of the factory owner and public benefactor. They were active in council affairs, exerted considerable influence on parliamentary elections and granted land for various bodies, such as the Returned Soldiers League at Woodside, the Institute at Littlehampton, the Stirling Oval and the oval at Balhannah was called the 'Johnston Memorial Park' as a tribute to their contribution to the prosperity of the area.<sup>26</sup> Walter Henry Pike, too, was active in many matters of local public importance. He became a Justice of the Peace in 1907, represented Oakbank Ward as Councillor in the District Council of Onkaparinga for 14 years, was chairperson of the local school committee and was a member of the Oakbank Racing Club and Agricultural Society.

As leading colonists struggling for reform and embodying some of the ideas of liberal idealism, with a heightened sense of citizenship these early manufacturers had a bitter hatred of patronage and privilege and there was no squattocracy in Oakbank. In the eulogies at his death, tribute was paid to James Johnston's unostentatious activities and his hospitality and geniality.<sup>27</sup> But as the prosperity of these early families increased their liberalism decreased; and the seeds of their employees' loyalty to them contained bitter fruit. For during the period of prosperity Oakbank emerges as a town divided between the two highly competitive breweries; the Oakbank brewery workers drank Johnston's brew and the Dorset

workers drank Pikes and legend has it that they often walked down the other side of the street from each other. They played for different football teams. Community spirit was slow to develop in a town caught between two companies competing for the same business. When J. and A.G. Johnston Limited was forced to reduce the alcoholic content of its beer under the 1902 licensing laws it had trouble with wild yeast. The milder brew had less capacity for resistance.<sup>28</sup> In 1914 Andrew Deas Johnston died. With competition from larger brewers, better equipped to handle a large range of different types of beverage, to keep bottles in circulation, and to keep up with the development of an efficient transport infrastructure it became more difficult to match ever highly capitalised operations.<sup>29</sup> Given the economic situation of the times, the production of alcoholic beverages ceased. Future purchase of ale, stout and tonic used for the chain of hotels was to be made from the Walkerville Co-op. Brewing Company, Southwark (later South Australian Brewery Holdings Ltd.). The firm continued to produce soft drinks and cordials and to operate its twenty one hotels from Oakbank. By 1979 the nominal share capital was \$600,000; 300,000 shares at \$2.00 each.<sup>30</sup>

The Dorset brewery continued to manufacture alcoholic drinks until 1938 when the brewers disease, known as the 'Fox' attacked the brewery, for which there was no known cure. Insulated from the depression of the 1930s by the strength of its tradition and business operations for in 1930 the capital of the company was increased from £25,000 to £100,000, finally Pikes too faced difficulties competing with the modern developments in the industry. Its old style beer, with its highly individualised flavour, produced by old fashioned methods, was to be replaced by more mass produced supply from the South Australian Brewing Company Ltd.

In 1973 the clash of two different economic realities reverberated through Oakbank. H. Pike and Company was on the market and was to be bought by Thomas Barr Smith - described as one of his 'occasional abberational investments.'<sup>31</sup> Employees secure in a life-time's employment were hopeful that the business would continue and possibly a new scheme emerge involving Barr Smith's collection of vintage cars. But they were given two weeks' notice. Barr Smith had broken up with his business partners and made the 'hard decision' from the economic point of view that re-structuring the brewing industry was not viable.<sup>32</sup> His firm then sold one of the hotels, making a windfall and have continued with the lucrative management and modernisation of hotels in and around Adelaide, which include the Duke of York, The Belair, The Eagle on the Hill and the Crafers Hotel.

The Directors and Managers of Pikes had not realised the full value of their assets. The later generations of Pikes had been handed an ailing concern and none of the family had either the required enthusiasm or business acumen to keep it afloat. Like the stories of decline among other family centred businesses later generations had different interests and aptitudes; Henry Pike for instance, co-opted into his father's business, suffered all the restrictions and none of the

freedoms of generational revolt. Among the shareholders, all substantial holdings had been held by members of the Pike and Beasley families.<sup>33</sup>

The Oakbank Brewery took over the market trade from Pikes and some of the former employees of H. Pike and Co. found positions there. Paradoxically, though some of the ideals of the utopian dreamers and William Morris have re-emerged in a different guise for the brewery now functions as a workshop and gallery. In one section the Oakbank Weavers, Mary Cassini and Peter Stapleton hand weave fabrics in traditional and original patterns for bedspreads, upholstery, table cloths, dress and skirt lengths, wall hangings and serapes,<sup>34</sup> and in another section A.C. Challen who also believes in the integrity of working with one's hands, restores fine and antique furniture.

Over the years J. and A.G. Johnston continued to expand and add to their twenty one hotels by purchasing twelve further hotels including those at Mannum, Milang and Mt. Torrens, seven of their hotels changed hands and two were closed down.<sup>35</sup>

How much longer will the Oakbank Brewery continue to produce lemonades and cordials in its idyllic surroundings and old world atmosphere? Will the more negative, invisible side of the firm in its hotel business, guided by an outmoded profit motive dominate, or will they perhaps perceive the unique heritage possibilities of the complex?<sup>36</sup>

Oakbank is a township in transition, with a rich and important history. Its time as a manufacturing village with its former simple - yet divided - social structure, its smallness in size with its benevolent patrons and intricate family networks has long since passed. The expansion of the brewing industry and its associated hotel businesses led to the decline of the one man owner-licensee-host,<sup>37</sup> and it survived the criticisms of the Temperance movement when, at the turn of the century the brewing industries were transformed through technological innovation and declined. But some of the echoes of the early settlers' visions remain in the rich Onkaparinga valley with its clear ground waters, where the rural tempo of people's lives can be counterposed against the annual excitement and activity of the Easter races. In our need to transform the means of production and relearn the relationship between nature and humanity, Oakbank still plays a part.

## CHAPTER 10

British Church Congregations in the 19th Century

Deborah Jordan

Edward Gibbon Wakefield, the political economist so important in the foundation of South Australia, insisted on religious equality as a principle in his theories of systematic colonisation. He believed that the new colonial experiment should be open to all denominations. As an Anglican he supported the presence of the Church of England in the new colony but it was to be based on the voluntary principle; no grants were to be made for religion and education from public funds.<sup>1</sup>

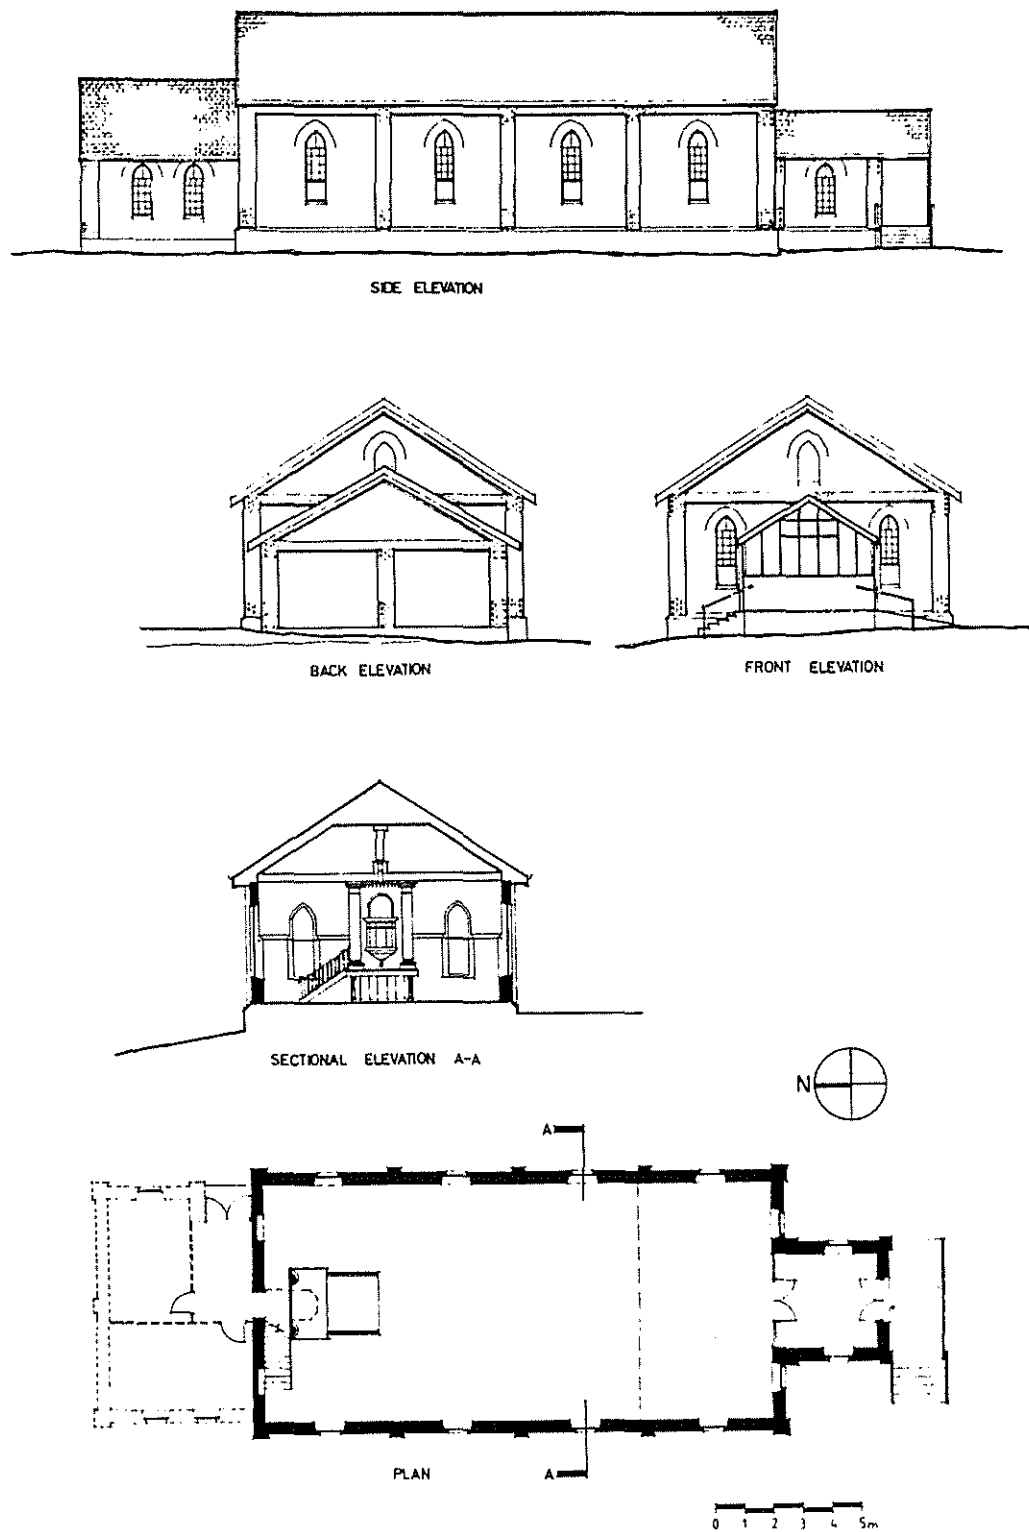

His ideas on the religious provision of the colony were taken up by the South Australian Association, who in planning the colony emphasised that there was to be no established church as in Britain at that time, no dominant party, no sectarian principle, no tithes or church rates. They attracted the interest of large numbers of the British middling classes - dissenters and non-conformers.<sup>2</sup> The Lutherans too, suffering religious persecution in Prussia hoped to find a place to express and live out their own beliefs freely (Figure 36). The development of the Lutheran congregations at Lobethal are covered in the *Lobethal Survey Report*.

But in the actual Act of Parliament leading to the establishment of the colony, that compromise between the planners and the Imperial Government, a clause was slipped in empowering the Crown to appoint 'chaplains and clergymen' of the Established Church of England or Scotland.' This however did not deter the Dissenters' faith in the voluntary principle and religious liberty as a cornerstone in the foundation of the colony; they would employ their own clergymen. Just as they could do without English authority, the self supporting system of land sales and emigration could be matched by self-help in religion also.<sup>3</sup>

Methodism, the most successful and influential religious movement in the nineteenth century South Australia, was a strong force in the Onkaparinga District. Regarding themselves as heirs of John Wesley with an organised central system the three branches of Methodism - the Wesleyans, the Primitive Methodism and the Bible (Christian) used laymen in large numbers as local preachers.<sup>4</sup> Primitive Methodism in particular associated with radical and progressive thought went to where the people were - especially the lower classes. The early history of Balhannah where the farmers were clearing the land and planting<sup>5</sup> is closely associated with Methodism. Services were conducted in the homes of the people and also at times under the two large gum trees near the Balhannah mines. In 1841 there were 25 religious preaching places of which Balhannah was one.<sup>6</sup> Thomas Hutchens an early settler recalled the first services of the Wesleyan Methodists at Woodside were held in a little house where the Institute now stands and the early preacher was the Reverend Joseph Dowe.<sup>7</sup>

The Anglican Church, the largest single denomination in

Figure 36 Plans of St John's Church, Lobethal

S.A. inclined to stress doctrinal teachings, 'Church principles, liturgical forms and the sacramental piety of post Tractarian High Anglicanism'<sup>8</sup> had in comparison, very simple beginnings at Woodside - the first services, conducted by the Reverend George Newnham of Blakiston were held in a two roomed slab hut, tenanted by a wheelwright names Hunter. It was on the Western bank of the Onkaparinga:

In one of the rooms of this hut, which served for many purposes, the Clergyman was duly robed, with the assistance of Mrs. Hunter, in the presence of those who had assembled. The service in this room was as reverently conducted as circumstances would allow. The camp-oven, containing its juicy joint, did duty over a suitable fire-side, whilst the clergymen was endeavouring to warm up his hearers. The hissing sounds from the oven had a stimulating effect upon the auditory apparatus of the worshippers, whilst the pungent odours emitted had a similar effect upon their olfactory nerves, especially if the sermon was continued beyond the orthodox limits.<sup>9</sup>

The dispersed population in these early country settlements posed particular problems to those religions requiring church buildings and ministers to conduct services. Finance was the major impediment, but the voluntary principle remained strong. When Mt. Barker for instance was surveyed, the proprietors offered to reserve a number of Sections for churches and Gawler, the 'born-again' governor, was prepared to accept the plan. There was a storm of protest until the public was reassured that Gawler did not intend to single out any group for favours<sup>10</sup> but slowly the principle of religious liberty was being eroded.

On 10th July, 1846 a meeting was held at Paynes' Inn (Figure 37) at Inverbrackie to consider the building of a church or Scottish kirk for the settlement of Scotsmen in the locality. Dr. Innes was amongst them, so too James Johnston from Oakbank, and the men, mostly single, came from as far as Balhannah. They decided to adhere to the established Church of Scotland (which accepted the principle of State aid) and ask the government for a grant of land and share of public funds. They outlined the situation to the kirk session as part of:

...the combined special survey of the sources of the Onkaparinga secured by the South Australian Company. This is rapidly becoming occupied by an industrious tenantry and fixed residential proprietary, mostly Scotchmen. Yet within its whole limits (of 100 square miles) there does not exist a single place of worship or resident clergyman, with the exception of the Lutheran Chapel in the German Village of Lobeth Hall (Lobethal).<sup>11</sup>

In parliament the issue of state aid to religion reached a flash-point in June 1846, a month before the Scots met at Paynes Inn. Under Governor Robe the Council had passed a resolution that the Governor make a grant from general revenue for religious and educational purposes, available to all denominations of Christians. In 1847 regulations proclaimed

Original Caledonian Church Manse, Inverbrackie. This building was completed about 1860 and replaced the first manse in the previous Paynes Inn. The photograph was taken circa 1960 before the erection of additions and show more clearly the original wing of the manse with its corbelled gable and the loft door.

Figure 39 Plans of Caledonian Church Manse, Inverbrackie

grants of aid to religion and education to promote the buildings of churches and chapels for Christian worship.<sup>12</sup> Four of the denominations - the Anglicans, the Church of Scotland, the Catholics and Wesleyans were prepared to accept grants while the others remained committed to the voluntary principle. Hence in the years 1846-1851 when the South Australian Parliament dissolved entirely the connection between church and state (the first British Colony to do so) there was an extensive building programme of churches in the Onkaparinga area. The Caledonian Church at Inverbrackie was the first with its grant of 20 acres of Crown land for a kirk, manse and cemetery, in August 1847. A building committee was formed and a subscription list opened. They also received 150 pounds towards the building of the kirk which was completed before the end of 1848 and opened in January 1849 by the Reverend Robert Hainings (Figure 38).

The first Anglican church at Balhannah was built in about 1848 and was probably intended for use as a school. There are few surviving early records although it was built and in use before the land grant to the Bishop of Adelaide was made in 1851.<sup>13</sup> At Woodside the land grant of 20 acres also was available in 1851 and building started immediately, the church opening on 26th October. Dr. Mayo had given the first £100 towards the cost. Mr. F.G. Light (a relation of Colonel Light) had prepared the plans. The Reverend John Fulford had replaced the earlier minister and before the church was complete services had been held at the Inverbrackie Kirk.<sup>14</sup> The Wesleyan Church at Woodside also received its land grant of 12 acres late that year, and the church was built in 1852 (one of 12 Wesleyan churches built in 1852). Trustees included T. Hutchens (farmer), D. Moffatt (storekeeper), J. Tremouth, J. Attwell, J. Tomkins, J. Cotton, W. Maguire and H. Goss.<sup>15</sup> The congregation was English in origin as the ships which sailed for South Australia were from Plymouth, England.<sup>16</sup>

In its final form the 1847 ordinance had outlined that a maximum grant of £150 was available for any group of not less than 50 adults who satisfied the Governor that they had subscribed at least £50 by Private contribution towards the erection of a church and an allowance of £50 towards the stipend of any minister who certified that he had at least 50 bona-fide pew holdings with Sittings paid up for a whole year in a church where worship was conducted not less than 6 times a year.<sup>17</sup> Each of the different churches built in the area reflected the wider backing of their congregations. The case of the Caledonian Church at Inverbrackie is instructive; in their subscription list of 60 people they raised £143/2/-, donations varying from £10/10/- to 5/-. The church was finally opened with only a debt of £24/13/-. But they had to arrange for a minister; attempts were made to unite with the Mt. Barker area in their need. Finally in late 1849, £30 a year plus a surplus from seat rents was promised and overtures made to the Anglican minister at Blakiston. The following year he was prevented from renewing his service by Bishop Short because the building was unconsecrated according to Anglican rites. In 1852 30 people guaranteed £81/10/- for three years service for a minister at Inverbrackie and Mt. Barker. Before

the first minister, John Macbean arrived from Scotland (via Canada) Reverend John Bishop Titherington, a Baptist officiated.<sup>18</sup>

Just as the Caledonian church faced difficulties finding a suitable minister and ensuring a stipend the two Anglican congregations had troubled early days. At Woodside three years after the church had been built, because of shrinkage in the foundation the front fell down and substantial renovations had to be made. In August 1857 the church was closed - the Bishop (Short) wrote to say that through lack of local support and shortage of clergy, 'he could do nothing more, and on the motion of the Wardens it was decided to close the church for the time being.'<sup>19</sup> They were difficult years and through lack of local support the congregation could not raise the necessary stipend. Quite possibly the committed members of the congregation at Woodside objected to the high church principles of the Bishop Short and the Anglican Synod. In 1865 a public meeting at Woodside, which included Dr. Esau, Mr. Charles Wright and Mr. James Rollerson, a policy was adopted of uniting Woodside with Mt. Torrens and Mt. Pleasant as a separate parish. Reverend William A. Clayfield was appointed and in 1874 an agreement was made with Reverend H.M. Pollit - 'to pay £25 per annum towards the stipend of a clergyman, provided he introduced no High Church forms.'<sup>20</sup> The same meeting resolved to abolish Hymns 'Ancient and Modern' and refused the gift of a baptismal font returning the donors' money. In 1883 a new and larger church was built.

At Balhannah the various meetings in the early years seem to have been chiefly concerned with raising the necessary stipend and deciding the price of pew rents.<sup>21</sup> With consistently larger congregations than at Woodside the church expanded and in 1864 proposals were made for a larger building to be built. It was designed by the architect Robert Page, then living in Oakbank. In 1862 the Wesleyan congregation at Woodside had also built a new and larger church, during the ministry of Reverend Henry Chester. But just as important (and perhaps even more so) as the divine services in religion to the early settlers was the question of educating their children. As we have seen the Anglican church at Balhannah may originally have been intended as a school because it had a fire place and chimney<sup>22</sup> and as soon as the Caledonian church at Inverbrackie was completed the vestry was used as a school. Possibly a day school had been established even earlier by a Mr. Jones Ferguson in a simple building constructed of slabs and shingle roof in an adjoining section. Miss Ferguson was also teaching prior to Mr. Orr and by 1851 24 children were placed under the tuition of Mr. Humpage, school master at Inverbrackie. In 1858 the school was superceded by one at Woodside.<sup>23</sup>

The Primitive Methodists, relying on the Voluntary principle to fund the building of their churches established them a decade after the Anglican, Presbyterian and Wesleyan congregations in the area.

The Primitive Methodist church built at Charleston in 1850 was the exception. There the Dunn family and Charles Newman,

Sunday school and original St Mark's Church of England, Woodside

St Mark's Church of England, Woodside

both typical of early South Australian settlers - 'pious, non-conformist yeomen seeking to fulfil their hopes in the paradise of dissent', supported the building of the chapel in the successful days when all the grain they could produce was sold at inflated prices to the diggers on the Victorian goldfields.<sup>24</sup> It was built for the initial cost of £90 (with a debt of £20 on completion). Substantial improvements were made later and by the 1890s it had 80 lettable sittings and 20 free and an average of 40 people attended regular services out of a local population of 90.<sup>25</sup>

In 1856 the Mt. Barker Primitive Methodist Circuit was founded; in 1859 the Gumeracha Circuit was established. Bonneys' Flat Church was built in 1859 on a hillside just out of Balhannah by John Carmac, a senior landowner in the locality from 1842. The original trustees were Thomas Stalley, Thomas Botham, George Theobald, Robert Lindo (farmer) and Jabez Johnson. Thomas Carmac and his brother James were just some of those who helped to build the church at the cost of £168 (with a large debt on opening of £100). The church had 50 lettable sittings and 25 free and by the 1890s averaged an attendance of 30 out of the local population of 60.<sup>26</sup> It also included a cemetery. The Carmac family remained closely linked with the church - Thomas Carmac held every office available to a layman and for 53 years he was the superintendent of the Sunday School. Services were held in the church continuously until 1931 when a modern church designed to seat 114 with a Schoolroom at the side was opened, built at the cost of £1000. The land was given by William Johncock.<sup>27</sup>

The Primitive Methodist chapel at Murdoch's Hill was built just a year after the one at Balhannah. It is located away from any townships and served a scattered rural population. In the chapel schedules it is recorded as having been built in 1861 at the cost of £168 (with a debt of £100). It had seating for 100<sup>28</sup> - all of which were free sittings, possibly indicating the radical nature of the early congregation. The chapel was opened on 24th June 1866 and the day's activities ended with a multi-denomination 'powerful evening meeting' where Reverend James McBean (of the Inverbrackie Church), the Reverend W.A. Clayfield (from St. Marks Church of England, Woodside) and the Reverends W.V. Dean, S. Wellington and A. Pithouse all took part. The following Monday a tea meeting was held and 150 people attended despite the torrents of rain in an Onkaparinga winter.<sup>29</sup> Jabez Johnson, also associated with Bonney's Flat, is listed as the preceding landowner and he may have donated the land.<sup>30</sup> The chapel also had a school - the only Primitive Methodist church school listed in the area - and at the rear of the building a random stone extension, complete with fire place and chimney served to educate the local children.<sup>31</sup>

The Oakbank chapel was built on block 48 Elizabeth Street in 1863 at the initial cost of £168 (with an outstanding debt of £100). The first trustees included Messrs. W. Wilshire, G. Attenborough, V. Peacock, J. Smith, W. Leak, J. Fishlock (farmer) and the Reverend J.H. Wright. The church was built on the wrong block for the land was actually owned by the Johnston

Original Wesleyan Chapel, Woodside, built in 1851

Methodist Church, Woodside, built in 1862

family. But the Johnstons must have accepted the mistake readily enough for when a new church was built in 1887 possibly designed by the architect Page, James Johnston donated the building materials.

It was built by A.W. Seagrim. The Carmac family also were closely connected with this church and its flourishing Sunday School, listed as having 117 adherents and scholars in the 1890s; various members filling the positions of superintendent (of the Sunday School) and organist. There was no need for a school, because the council of Education purchased land for that purpose in 1878. Before that E. Carmac's grandmother taught the local children in her cottage.<sup>32</sup>

Similarly there are few details about Woodside House listed in the early chapels' schedules as having been built in 1864 at the initial cost of £100 (all borrowed) and with substantial improvements later (£504/17/-). Curiously the schedules only record the members in the society as 15, and the Trust Estate included one cottage.<sup>33</sup>

The Primitive Methodist church at Stony Creek was established decades later - in 1884 Charles Eglington gave half an acre of land near his house. Geoffrey Bishop in *Stringybarks to Orchards* has recorded its history and how the church was in fact not built on the land given for its purpose and on the day of the opening the irate owner threatened the assembling congregation with trespass.<sup>34</sup>

So by the 1880s there were six flourishing Primitive Methodist Centres within the Woodside circuit (including the chapel at Tungkillo) and a further one at Stony Creek. In the 1870s in the state as a whole one in four people belonged to the Methodist church. Religion played a vital role in the people's lives - Methodism offered an almost self contained and social subculture.<sup>35</sup> Often there were two services on Sundays; a mid-week meeting; sundry bodies for raising money for the local church and overseas missions, bible study groups; prayer meetings; local preacher's classes and occasional love-feasts (fellowship meal and prayer and testimonies).<sup>36</sup> There were public meetings where a visiting minister might give a lecture, public teas and anniversary celebrations. Oakbank chapel had a choir and each church had a Sunday School, with picnics.<sup>37</sup>

Community activities also flourished at Grünthal where the third branch of Methodism - the Bible Christians, established themselves in the Stirling Circuit Parish. First church services were held there in the home of John Clark in 1870, the site of the church was purchased in 1876 with W. Radford (bootmaker of Bridgewater), J. Clark (gardener of Grünthal) and J. Humby (gardener of Grünthal) as trustees, from William John Clark. A small stone chapel was built in 1879 at a total cost of £87/18/3. Originally called the Stanley Bridge Chapel, it then became the Grünthal Chapel.<sup>38</sup> The organist was Mr. Hoddenott, who kept the local store and post office.<sup>39</sup>

The church was also used as the first school in the locality; in 1881 Grünthal School was opened with Mr. McDonough as principal. It was later transferred to the Mine House, owned by Mr. and Mrs. Swinburne senior before closing.

In 1888 it was re-opened, again in the church with Miss Tucker in charge. In 1903 the school moved to a house diagonally opposite the hall; a new school was built in 1913.<sup>40</sup>

The names J. Clark, D. Beaumont, A.W. Mack and members of the Sandow family, the Grivells and Korbers have long been associated with the church and Sunday School. Early this century they had a regular annual picnic at the Hahndorf recreation ground.<sup>41</sup>

One historian has argued that it is indisputable that in some areas of the hills a great deal of rivalry existed between various branches of Methodism - at least until the 1880s. By then, he points out how on a local level there was also a good deal of co-operation and how they used each other's local preachers, closed for each other's specials and bought jam and pickle at each other's fetes.<sup>42</sup> In 1900 the different strands of the Methodist Church unified - the Wesleyan, Bible Christian and Primitive Methodists became simply Methodist Churches. The Woodside primitive chapel one of the two Methodist Churches there was sold and became part of the Woodside Butter and Cheese Factory.

Bonney's Flat Cemetery

## CHAPTER 11

Where Instruction Does Rule : Education

Deborah Jordan

Schooling in the Onkaparinga bowl has two diverse strands. On the one hand there has been the strong Lutheran tradition which has led to the provision of vigorous primary and secondary private education schemes. On the other, public education has passed through many varying phases, when, from the early days the struggle for development was firmly in the hands of the local communities, schools were small and limited to primary education. Today the State education system offers a highly centralised and efficient socialisation process, at both levels of education in the district.

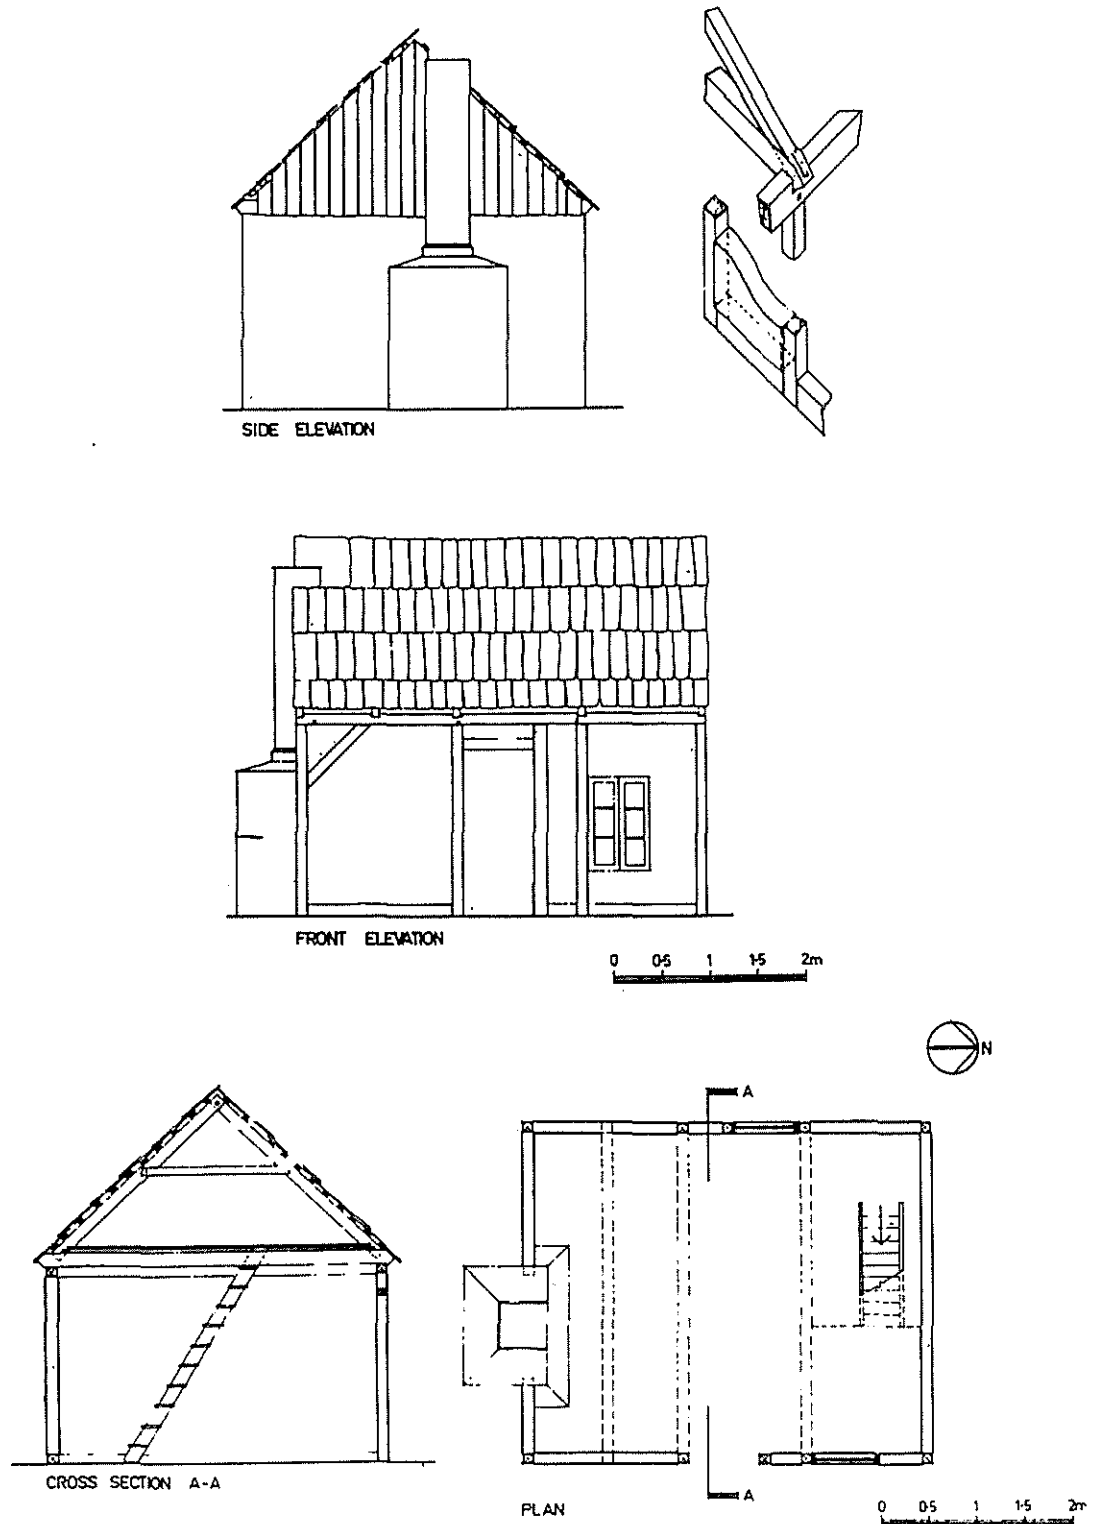

School in the open air began for many of the German children from the very first days of settlement. The first educational institution established in the Onkaparinga District Council Area was in 1845 when the Lobethal College (seminary) was built by the Lutheran congregation for Pastor Fritzsche's students (Figure 40). In 1851 a Lutheran day school was also built and dedicated at Lobethal.<sup>1</sup> At Springhead the school and teacher's residence was built before the church and was used for divine services. Opened in 1856, there were 27 pupils and the first teacher was Mr. Hammar. With rapidly increasing numbers a new school and teacher's residence was built in 1865/6, much needed, for by 1871 there were 68 school children.<sup>2</sup> At Hahndorf too, the early Lutheran population provided amply for the education of their offspring voluntarily with the opening of the Hahndorf Academy, an Institute of higher learning in 1857 and a Lutheran primary school. Originally classes were conducted in the German language; later last century English was also used. In the mid 1870s when the teacher W. Strempel disagreed with his brother Pastor Strempel, a second but public school was opened in Hahndorf. The curriculum differed in having no course in religious studies.<sup>3</sup>

The other religious grouping which held the ideal of education strongly were the Scots settled in the Inverbrackie area. There too the school house had a central place in the community and was closely linked with the establishment of the Inverbrackie kirk built in 1848.<sup>4</sup>

In these early days without either compulsory education or our notions of childhood many of the children would have run free. Some were gathered together to learn the rudimentary 3 Rs, possibly taught at home by an elder sister or as in the case at Oakbank, by a grandparent. E. Carmac has recalled how his grandmother taught the 'first little school in her cottage, just small children'.<sup>5</sup> In 1851 the first schoolhouse was opened in Balhannah by Henry Fenwick on a site within the original subdivision (Section 4208).

By 1851 the institutionalisation of education began when Government aid was abolished to the various religious denominations and control invested in a central body of education. Grants were made on a £1 for £1 subsidy basis

Figure 40 Plans of first Lutheran Seminary housed in St John's Church Museum, Lobethal

to schools supplying 'a good secular education' organised through a council, a municipal corporation or a local committee. Licensing and regular payment of staff were introduced and district councils were invited to visit and inspect any 'vested' schools in their area.<sup>6</sup>

The primary school established at Charleston in 1855 was the first vested school in the area. In July that year the School Committee of Mt. Charles had raised funding and arranged a submission through the council to the Education Board. Section 4247 was allocated for the site of the school. The first teacher was Mr. Taylor and 16 girls and 7 boys attended. Admissions registers dating as far back as 1877 remain at Charleston listing the pupils, the names and occupations of their parents and, perhaps most interesting of all, their reasons for leaving school - 'Left school', 'go to a private school', 'gone back to his home', 'left over 14' etc. The early roll books mark attendance, leaving a record of those days when the children were needed at home to milk the cows, care for younger siblings, or away ill, when epidemics, more prevalent in those days, swept through the district.<sup>7</sup>

By 1856 there was a school at Woodside as well as the school at Inverbrackie, both of which needed upgrading and expansion. Applications went in for both areas, however, after much debate and furore approval was finally given to the erection of a new school at Woodside only.<sup>8</sup> In December 1856 £200 was granted in Government aid and by July 1857 the school was completed, built on land donated by James Johnston of Oakbank. It was described by a contemporary journalist as one of 'the best and most convenient in the country districts', the brick schoolhouse measured 30' x 18' and the adjoining teacher's residence consisted of '3 good rooms'.<sup>9</sup> The first teacher there was Mr. J.G. Howard.<sup>10</sup>

With the death of the Inverbrackie schoolmaster in 1859 the Inverbrackie school was closed, most students attended the new Woodside school. Another public school was opened at the flourishing mining settlement, Manxton, four miles south of Woodside. In 1857 the Oakbank School and Mechanics Institute had been built on land given by Mr. Thomas Edwards designed by the architect Robert Page; there the first school teacher was William Whitfield.

In 1857 the Balhannah school committee approached the Central Board of Education with plans for a new building to be erected on Section 4022. A report submitted to the Onkaparinga District Council detailed the limitations and overcrowding of the earlier school and presented a 'plan, specification and declaration of Trust'. There was some debate about the suggested site; it was finally agreed that the new public school should be built on an allotment set aside for this purpose by Osmond Gilles in the new subdivision of Gilleston (section 4014). The substantial school and attached residence was completed in November 1858 at the cost of £395 (and used until 1938)<sup>11</sup> (Figure 41).

Forty seven children attended the first slab hut school in 1869 in the Lenswood - Forest Range district on Section 5148, called the Jerry's Flat School. They had two teachers - James

Pupils and teachers photographed outside Balhannah School. Above, the 1889-1892 intake; facing top, the 1892-1898 intake; facing bottom, the 1904-1907 intake.

Figure 41 Plans of Balhannah School and schoolmaster's house

Clarke and Christina Greenwood. A new school and teacher's residence (Forest School) was built in 1883/4 on Section 5149. An early settler, John Brock Fry, originally a sailor come sawyer, later a gifted teacher at the school (1871) was closely linked with its development. Erected in 1883, the building is still part of the present complex - the attached residence being used as a staff and office area. There have been many later additions, notably in 1937, when a large schoolroom was built.<sup>12</sup>

Just prior to the 1875 Education Bill, when compulsory education was introduced, there were ten 'licensed' schools in the area. The largest school was at Lobethal (vested) which had a total enrolment of 148 pupils; the two Hahndorf schools (both non-vested) were the next largest, followed by Woodside (vested), 87 pupils; Manxton (non-vested), 80; Springhead (chapel), 62; Balhannah (vested), 54; Charleston (vested), 52; Oakbank (non-vested), 50, and Jerry's Flat (chapel) with 49 pupils was the smallest. Evening scholars could attend classes at the Hahndorf School (headmaster William Strempel) and the Manxton School. A surprisingly high number of 'destitute' scholars were listed at Woodside (20) and Charleston (16). The ratio of the sexes varied considerably; girls outnumbered boys at Charleston 33:19; Oakbank 26:24 and Springhead 53:33.<sup>13</sup>

Under the 1875 Education Act one central authority built the schools, trained the teachers and paid their salaries; the trend towards a highly centralised system of control and standardised scheme of primary schooling continued.<sup>14</sup> Most of the schools only had one teacher, a few had assistants while the school at Hahndorf (headmaster Taugott W. Boehan) had three assistant teachers in the mid 70s. Only a few of the teachers had completed a training course; most were products of the pupil-teacher apprenticeship system and hence many assistants had grown up in the area.<sup>15</sup> Many of the older children were asked to teach the younger children - at Woodside at the turn of the century Dock Harris remembers how he was sent to teach 'the little' ones, but it was 'a waste of time' because they would not take 'any notice' of him.<sup>16</sup> Until 1892 teachers were paid according to their students' results beyond a fixed stipend. The subjects studied included Reading, and Arithmetic, Spelling, Writing, Language (which included grammar and composition), Poetry, Recitation, Geography, History Special and Moral lessons, Drill, Drawing and Singing. All the girls learned needlework.<sup>17</sup>

With our present understanding of the need for a much less formal and diverse education contemporary educational historians point out how that when wage rates were low, rural production unstable, no Social Security and frequent injury, illness and childbirth, the help or earnings of children could make a crucial difference to the well-being of the family.<sup>18</sup> Dock Harris was regularly late for school because he had to do a milk round before attending.<sup>19</sup> It has also been pointed out that 'discipline, punctuality, centralisation of schools, respectable clothes and correct English' might make sense for families with a settled existence and secure income, but often

Balhannah School in 1983, converted to a private residence

appeared harsh and impracticable for those who were less fortunate.<sup>20</sup> Many children went barefoot.

For many years the school children at Grünthal (Verdun) walked to Hahndorf. After the Bible Christian chapel was built it was used for schooling and enrolment numbers were initially as high as 86. However by 1887 numbers had dwindled and the school was closed through lack of support, reopened again in 1888, and it was not until 1913 that a more permanent place was established. At the height of the depression Charleston was listed in the official list of schools as 'provisional' because of small numbers attending; so too was the school at Murdoch's Hill which developed around the primitive Methodist chapel built in 1861.<sup>21</sup> The school at Manxton had disappeared from the records.

The passing years marked the development and expansion of school buildings, facilities and student numbers. A new school was built at Oakbank in 1899. But only the minority were given more than a primary education; the sons and daughters of the wealthy could be sent elsewhere to complete their education but few of the wider population. In 1917 all Lutheran schools in the State were closed by an Act of South Australian parliament and until 1931 Lutheran pupils were forced to attend the local public schools. Many German speaking children suffered because of the language barrier in the class-room and racial strife was rampant in the school-yards.<sup>22</sup>

By the late 1930s both the schools at Oakbank and Balhannah needed substantial repair and extension. Because of the expense involved to either repair both schools or to provide a school of suitable size for instruction in rural and agricultural subjects, a new school, the Oakbank Area School, was built and both primary schools closed.<sup>23</sup> It was the first attempt in the State at a consolidated rural school, where the curriculum was modified to promote 'a country life full of local interest and sympathies.'<sup>24</sup> The school was opened by W.B. O'Connell in May 1938 and 105 children attended: 55 from Balhannah and 49 from Oakbank. In 1939 Superprimary classes commenced and by the mid 40s there were nearly as many secondary students as primary students. In the early years a flexible and innovative curriculum was possible; Oakbank Area School was a 'show' school and there was a continual stream of interstate visitors. (Nowadays many high schools have followed the lead of the early area schools). The school has continued to grow and expand as many of the primary schools in the area have been closed. Virtually gone are the days when the children walked to school as presently 17 buses bring in children from as far as Murdochs Hill and Verdun.<sup>25</sup>

Today there are five remaining public (State) schools in the area - Charleston (now one of the smallest in the State), Lenswood, Woodside, Lobethal (catering for higher primary since 1929) and Oakbank Area School. There are two private Lutheran schools, one at Lobethal, the other at Mt. Torrens. Very young children are amply provided for with kindergartens at Woodside, Lobethal, Oakbank, Balhannah and Bridgewater within the council district. But just as the active participation of the local community has declined the early attempts and continuing

education for adults have never been brought to fruition. The TAFE scheme does offer some classes at the venue of the Oakbank Area School but the two institutes house very small libraries and the rooms often lie unused.

## CHAPTER 12

Urban Centres of the Onkaparinga District Council

Brian Harper and Peter Perkins

The establishment of the townships of Balhannah, Oakbank and Woodside, along the Onkaparinga Valley, is well documented in the chronology. The pattern of early travel into and within the region helped to determine the character of these townships. The first settlers would have followed the Angas River, now called the Onkaparinga, and entered this fertile valley near what is now Stanley Bridge, or over the hills from Carey Gully and Greenhill. With its undulating hills and fertile flood plain the Onkaparinga Valley must have appeared very desirable.

The townships with which we are concerned, Balhannah, Oakbank, Woodside and Lobethal, all grew from local initiative and economic opportunism - each one began by either government decision or private speculative development. Before the early 1850s Government attitude to the creation of new townships was indecisive and the responsibility was left to the private speculative developer. The sections that now make up Lobethal were acquired by J.F. Krumnow in 1842, William Johnson obtained the Oakbank land in 1840 and James T. Thomson took up land at Balhannah in 1839.

Early transport through the valley, by horse-drawn or bullock drawn carts en route through Balhannah, Woodside and Lobethal to Mt. Torrens and Gumeracha beyond, led to the establishment of a chain of coaching stops, hotels, stables and fodder stores at half-day travel intervals, and some of these establishments still survive. These routes and their close affinity with the river system entrenched the main pattern of settlement as it is today.

In the 1980s the settlements of the Onkaparinga district divide into two distinctive groups. The small villages and hamlets of Verdun, Lenswood, Charleston and Forest Range have ten or less private enterprise and public functions - the four townships of Lobethal, Woodside, Oakbank and Balhannah have between twenty and seventy functions each.

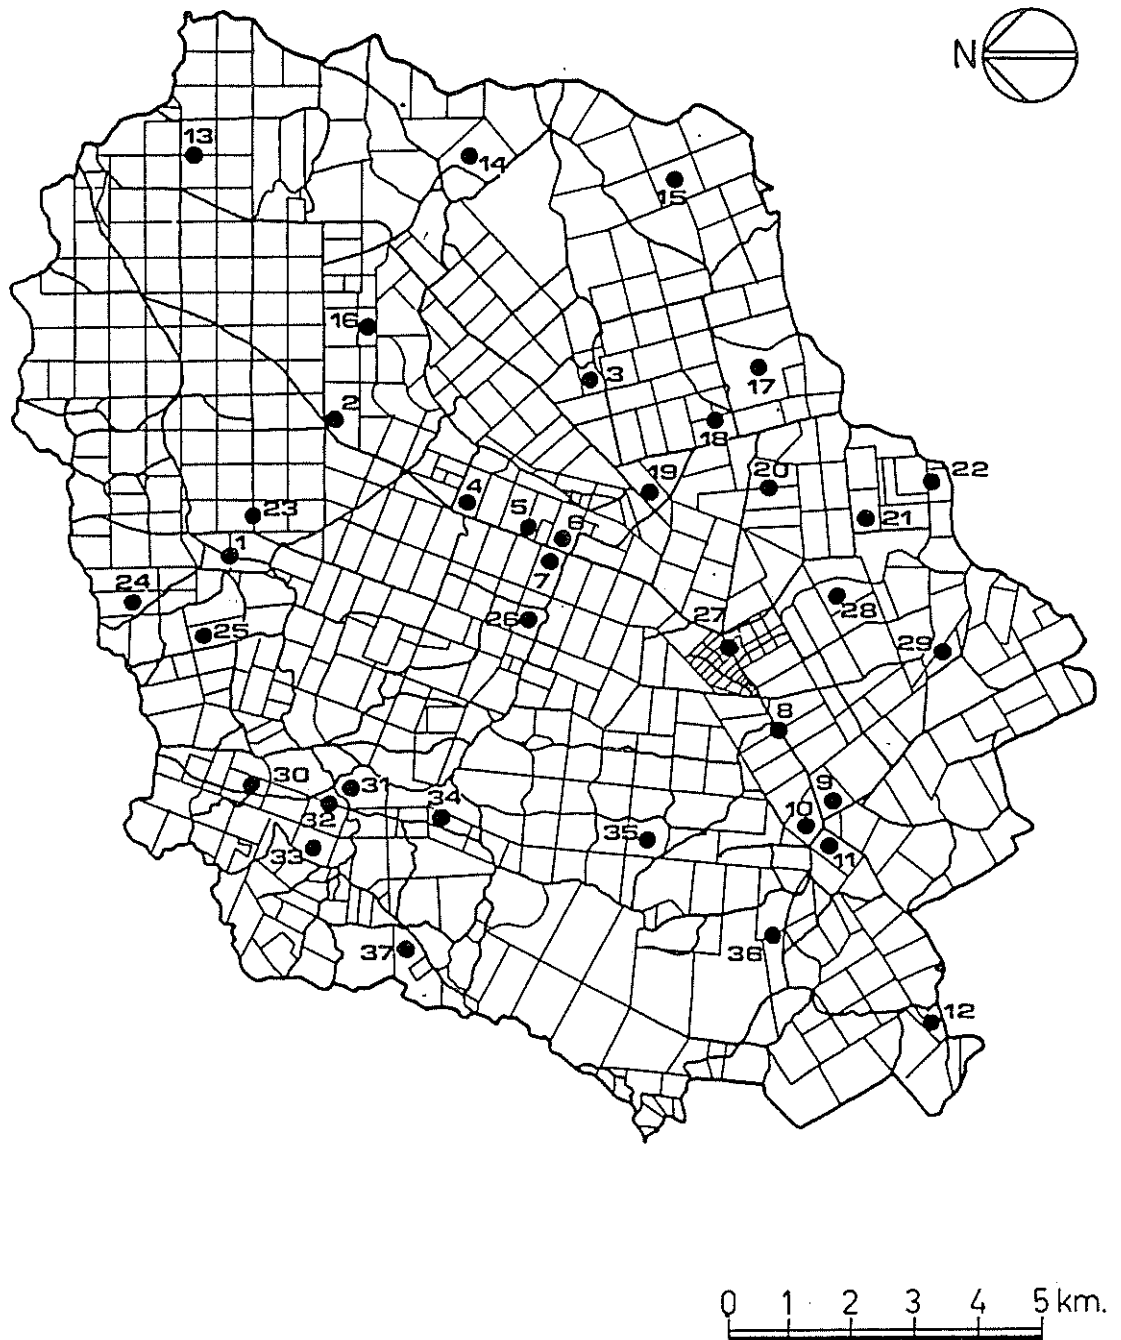

Lobethal is the most important service centre with seventy functions of which more than fifty are private enterprise. Both Woodside and Balhannah have thirty-one private enterprise functions but Woodside has eighteen public functions to Balhannah's nine. The smallest township of Oakbank has twelve private enterprise and eight public functions.

Although Oakbank and Balhannah evolved with separate village identities their proximity in the era of the motor car has meant that, from a functional point of view at least, they should be considered as a twin-township in respect to service functions to both their internal residents and to nearby rural dwellers.

While a decade or more ago the hierarchy of service centres in the district was clearly Lobethal first, then Woodside, then Balhannah-Oakbank, the distinction is no longer as marked. Woodside now has as many public functions as Lobethal, and has

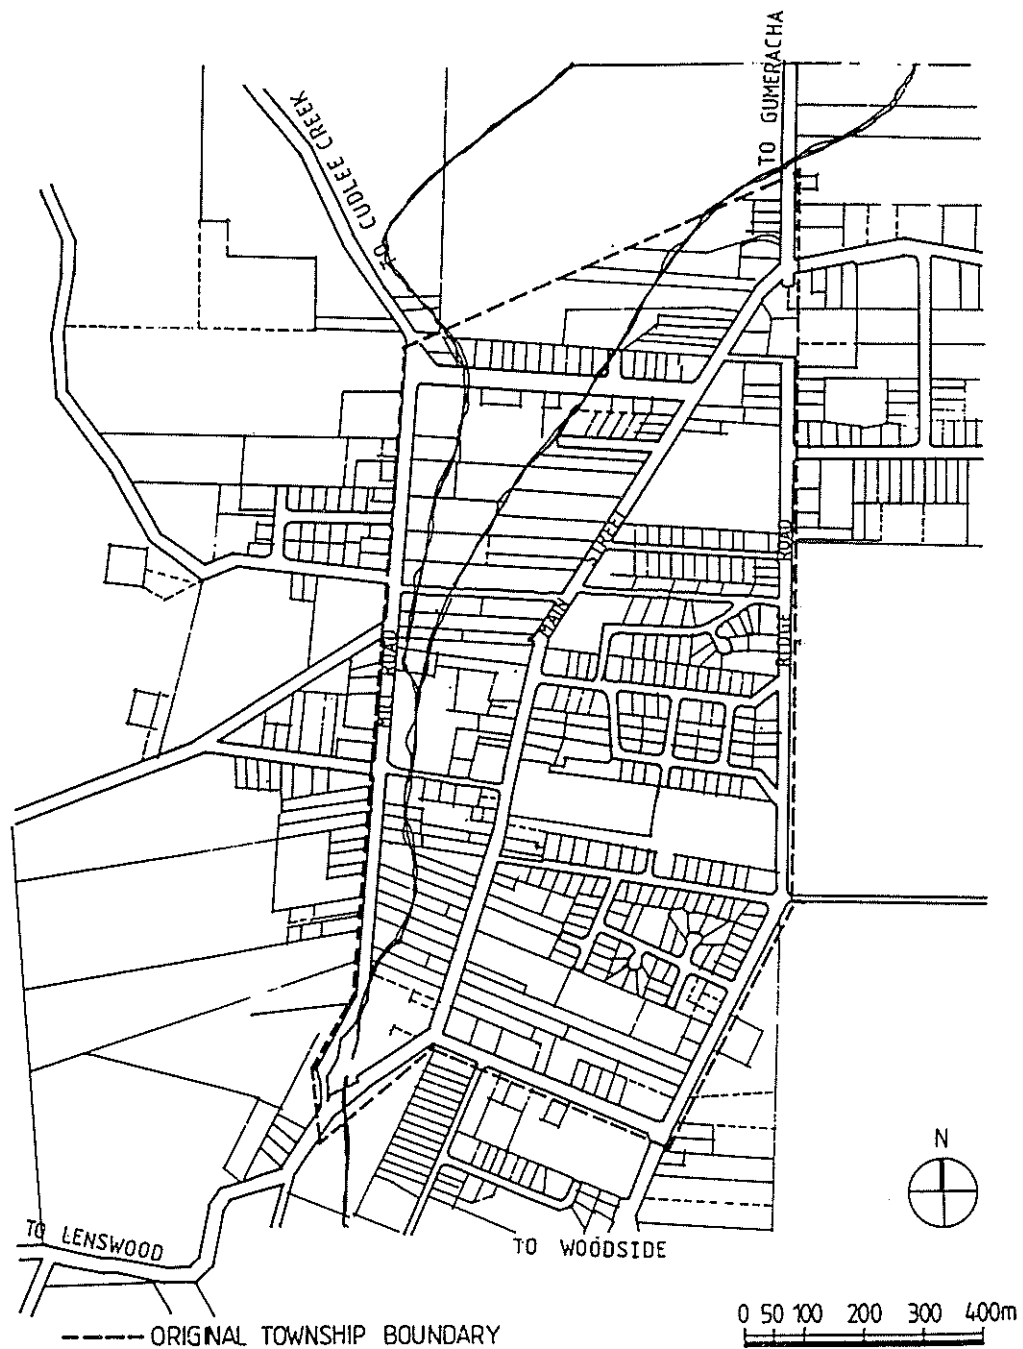

Map 7 Township and localities settled in the District Council of Onkaparinga (see Table 2)

**Table 2** Township and localities settled in the District Council of Onkaparinga. The locality names were often taken from those of a major holding, and as their use varied over the years this is not a comprehensive list, but refers primarily to names in common usage during the first fifty years of settlement.

TOWNSHIP SUBDIVISIONS			
1.	Lobethal	1842	25. Neudorf
2.	Charleston	1857	26. Western Branch (also extending north-east towards Lobethal and south-west towards Oakbank)
3.	Reefton Heights	c1883	27. Workingmens Blocks
4.	North Woodside Extension	1882	28. Rocky Gully
5.	Woodside Extension	1864	29. Glensloy
6.	Woodside	1850-51	30. Abbots Flat (originally part of Mitchells Flat)
7.	Woodside Extension	1858	31. Lenswood
8.	Oakbank	1855	32. Jerrys Flat
9.	Balhannah	1840	33. Stoney Creek
10.	Gilleston	1858	34. German Swamp (originally part of Mitchells Flat)
11.	Blyth Town	1855	35. Wash Creek (later part of Vernon Park)
12.	Grünthal (Verdun)	1845-52	36. Bonneys Flat
LOCALITIES			37. The Tiers (later Forest Range) - an area extending along the western boundary of the council district.
13.	Springhead		
14.	Sandy Water Holes		
15.	Scotts Creek - later Brushyards		
16.	Mount Charles		
17.	Murdochs Hill		
18.	Manx Town		
19.	Inverbrackie		
20.	Craigdarroch		
21.	Oatlands		
22.	Hay Valley - also called Windmill		
23.	Schoenthal		
24.	Tabor Valley		

Figure 42 Plan of Lobethal, 1983

captured some service functions from Lobethal because of its prime central position both geographically and socially. With the recent increase in Balhannah's population and the resultant impetus to the township, and its gateway position to the Onkaparinga Bowl, Balhannah-Oakbank with a total of sixty functions outstrips Woodside, and, in another decade could emerge as the dominant centre for the whole district, particularly if commuter residency continues to increase.

#### LOBETHAL (Figure 42)

The township is located off the main course of the Onkaparinga and was established on Lobethal Creek in 1842 by German settlers who laid out a Hufendorf farmlet village across the creek (Figure 43). The main road, parallel to the creek became the focus for the main commercial and industrial establishments which followed during its first hundred years of development.

Major approaches to the township provide varied and charming glimpses of Lobethal's valley setting and of its surrounding rural landscape of gently sloping hills with farms intermingling with large stands of both native and introduced trees.

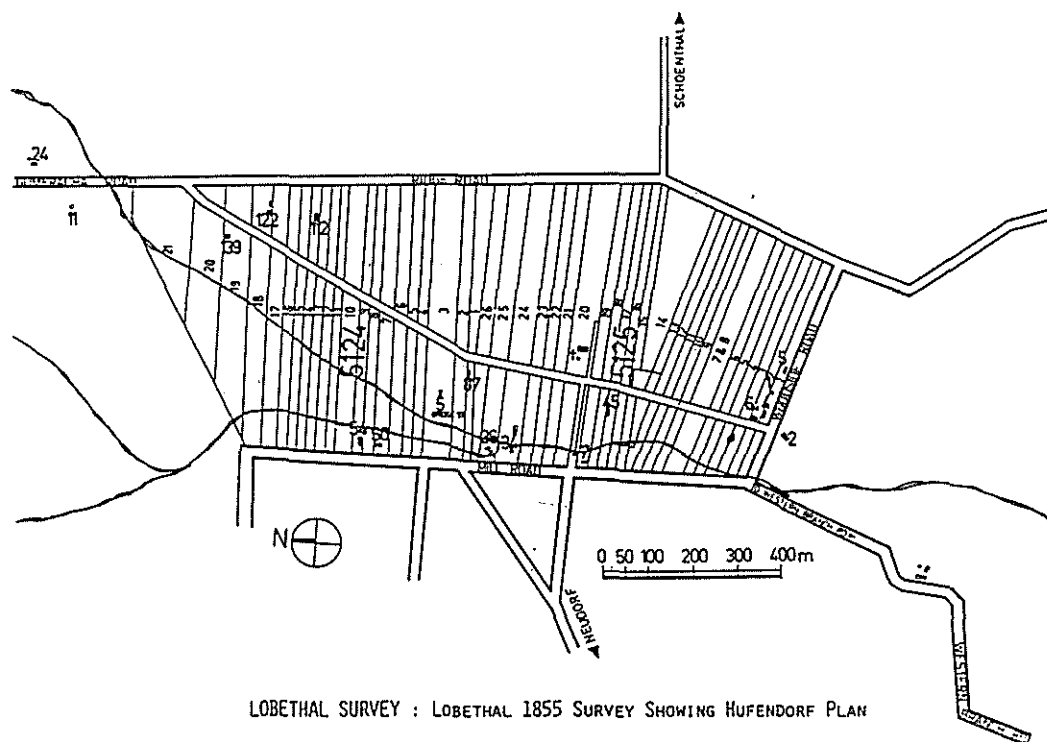

From the south the town is approached along either the Lenswood or Woodside Roads. The Lenswood Road follows a meandering path over the Mt. Lofty Ranges and enters Lobethal passing through orchard areas. Just before entering the town proper the road passes the old hospital building now used for an old folks' home. As the road curves to the north a grand view down the valley reveals the town at its centre, and the Onkaparinga Woollen Mills are passed before entering the main commercial street. The Woodside Road leaves the main valley road and passes over gently sloping hills past large houses and farms. As the road crosses the eastern ridge the panorama of the township and of the distant Nitschke Hill is viewed. This end of the town includes some of the more modern houses as it links with the main street at the mills.

The northern entrances to the town are from Gumeracha, Cudlee Creek and Mt. Torrens. The Cudlee Creek and Gumeracha Roads are similar in that they enter the valley from the steeper north-western slopes and travel along more heavily wooded landscapes than those from the south. These two approaches both afford spectacular views of the valley and town setting, and enter through areas of newer houses mixed with old cottages and light industrial establishments. The Mt. Torrens Road follows the meandering valley into the town, and while it does not provide an elevated entrance, it continues the feel of an established farming community nestled between farmlands, native forest and pine plantations.

In present-day Lobethal most commercial and industrial activities are still aligned along Main Street, from the Woollen Mills to Bridge Street, focussing to the southern end of the town on the road to Woodside. Adjacent to the commercial centre are the Lutheran school and the bowling green, but the state school is on the western perimeter, and the major recreation grounds are on the southern outskirts.

Lobethal lacks readily identifiable historic precincts but a number of areas in which early buildings are evident within

**Figure 43** Lobethal's 1855 Survey Plan showing Hufendorf layout. A similar subdivision layout was used for Grünthal (see Figure 44).

**Figure 44** Early subdivision plan of Grünthal (Section 1922 Onk), showing blocks of land sold by K F Boehrike between 1845 and 1853 (see Table 5, Appendix D)

the town boundary intimate the character of earlier settlement. These historic areas are:

#### **Mill Road**

Several historic farmhouses of the Hufendorf type remain in the area between Mill Road and Lobethal Creek, while remnants of former structures that lined both sides of Mill Road when it was the main street are still evident.

#### **St. John's Lutheran Church**

This was the first Lutheran Church built in Australia and it is located in the centre of the township. The precinct includes a two-storey manse, the first Lutheran seminary, now a museum. Adjacent is the Lobethal Institute, several old houses and a picture theatre.

#### **Main Street (Junction of Church and Bridge Streets)**

The Rising Sun Hotel dominates this area on the corner of Bridge Street. The area includes several early houses and shops together with a church (now the Uniting Church).

#### **Onkaparinga Woollen Mills**

(corner of Lenswood and Woodside Roads)

While the woollen mills dominate the area a number of settlers' cottages front the two roads. The remnants of an early brewery are in the mills complex.

It is the central area containing the Lutheran Church and other buildings which, in retaining its original historic integrity, is the most significant in terms of historic and cultural character. The Woollen Mills is an important historic entrance to the town, and is a focus for a much later historic period than that of the original settlement.

#### **WOODSIDE (Figure 46)**

Located centrally in the district alongside the Onkaparinga River Woodside was not established until 1856, fourteen years after Lobethal (Figure 45). It began as a private settlement in which riverside allotments were quickly taken up, but it was the impetus of mining activities in the area, such as at Bird-in-the-Hand, that led to the establishment of Woodside as a small commercial centre from which many of the original buildings have now been lost.

Although four main roads lead into Woodside it is the Valley Road on which the old commercial centre is located, and which now is really the edge of Woodside as a settlement. This road from Oakbank runs parallel to an old disused railway cutting on the eastern side of the road, but to the west are open pastures and farm houses established along the watercourse which itself runs through a gently undulating landscape. Various sporting facilities signal the approach to the town along the eastern side of the roadway.

The Inverbrackie Road passes through a rolling pasture landscape as it ascends into the new residential areas on the southern side of the township, and the Woodside Hospital and

Figure 45 Early subdivision plans of Woodside (see Table 6, Appendix D)

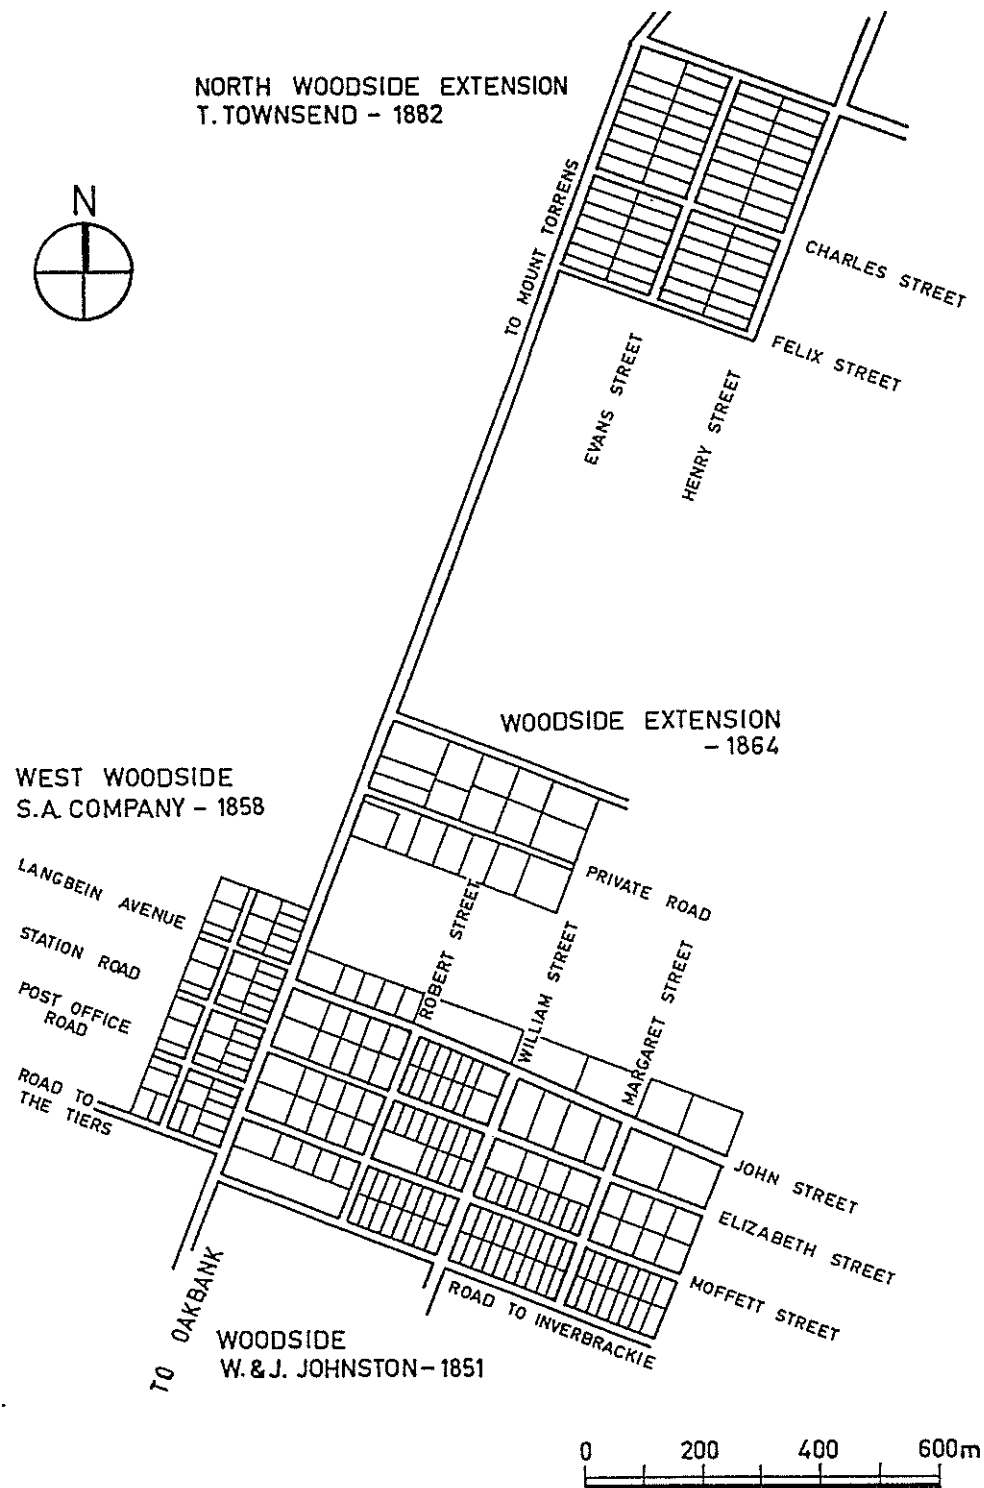

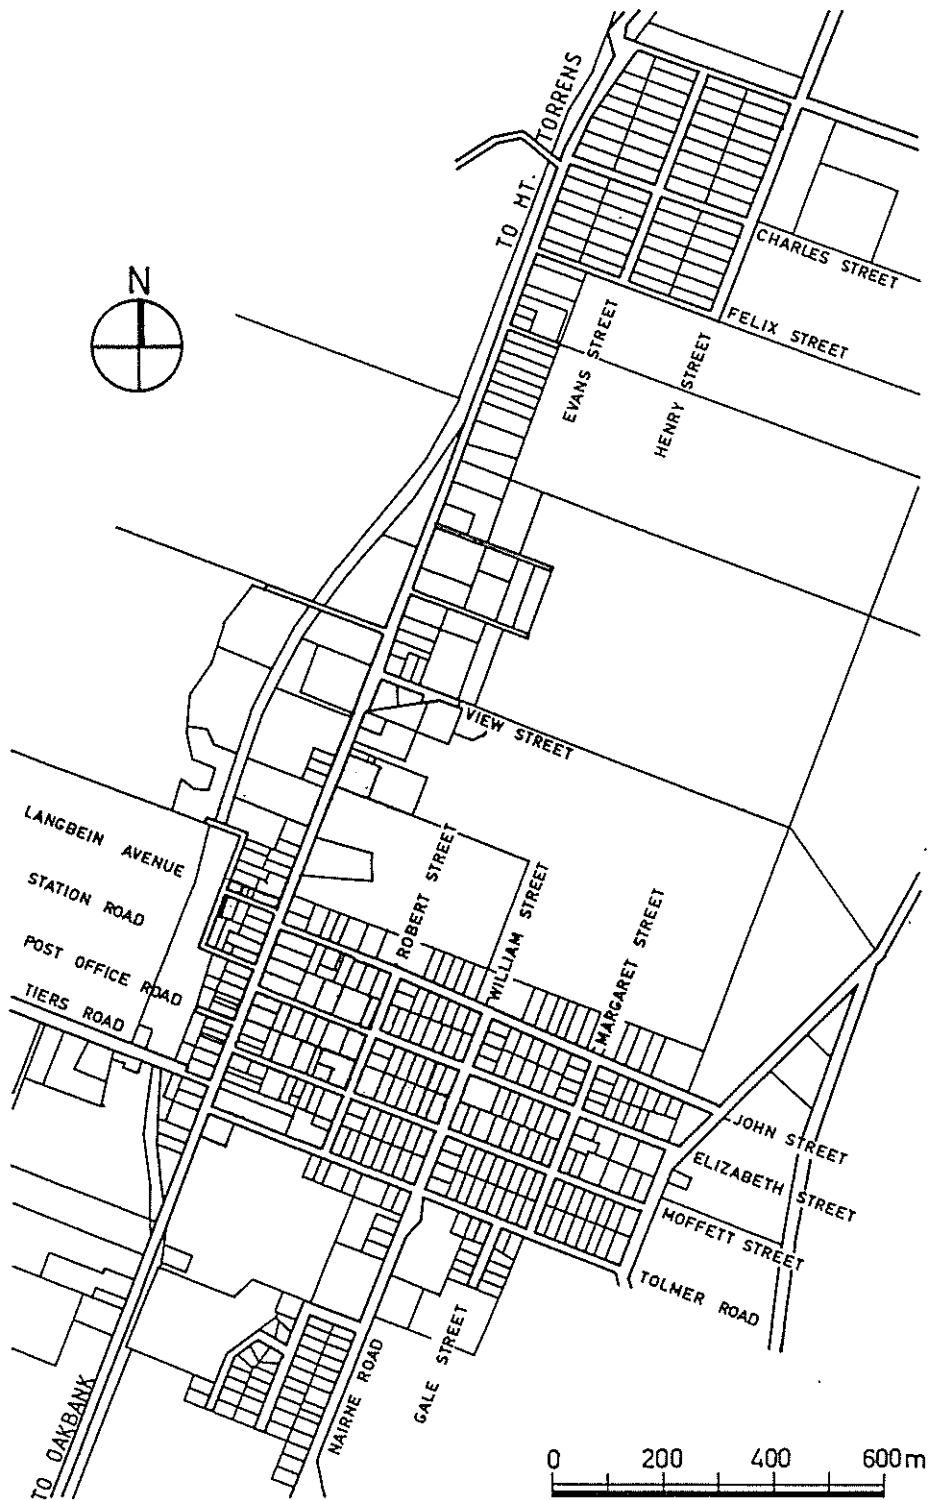

Figure 46 Plan of Woodside, 1983

Woodside Main Street, view north in 1984

Woodside Main Street, view north, circa 1900

Woodside Main Street, view south in 1984

Woodside Main Street, view south, circa 1900

two small churches accent this route. The final approach to the town centre gives access to the Police Station, the swimming pool and a retirement village.

The road from Lenswood descends from the small ranges west of the town to provide a scenic and panoramic view of the valley and the town centre. Although the road is in need of repair it does not detract from the appeal of this particular entrance into Woodside, for once in the valley, the road crosses an old bridge and passes the Onkaparinga District Council Chambers and depot. This entrance is marred only by the untidy and neglected rears of shops, houses and open workyards.

The approach along the Valley Road from the direction of Charleston is flanked by gently rolling hills but the immediate landscape consists predominantly of flat open fields. The town approach is signalled by a small group of houses on the outskirts of the town and a large church, all of which are separated from the township proper by a crest in the road.

Although the older parts of Woodside are aligned along the Valley Road the more recent growth has been to the south and east, well away from the river, so that the contemporary form of the township is T-shaped. Only the primary school, the hospital and a church provide some focus to the main residential areas behind the old town quarter.

The settlement of Woodside is focussed along the river-bound primary route through the Onkaparinga Valley, and the main road portion of the township remains as the major commercial axis extending from Tolmer Road in the south to John Street in the north.

South of the commercial area is the major precinct of public facilities for recreation purposes including an oval, playground, lawn bowls, and hardcourt areas. A swimming centre is associated with these facilities. A smaller recreation area immediately west of the commercial area contains a B.M.X. cycle track. Other public use areas scattered through the township contain several churches, the District Council chambers and a primary school.

The major residential areas are located east of the commercial core. These include an historical area of many older residential dwellings, as well as a relatively new residential subdivision near the outskirts of the township. Two other residential areas extend northwards on either side of the Onkaparinga Valley Road. The area to the west of this road contains mainly older dwellings and to the east the dwellings are located on large allotment blocks.

While there are quite a few items of historic buildings scattered through the older section of the township, there are only four significant areas that might be described as historic precincts within the town:

#### **Main Street (between Nairne Road and John Street)**

This is the major precinct incorporating the most important remnants of Woodside's commercial past - the Woodside Hotel (1850), the police station and courthouse, a church and examples of early residences, all erected in the mid to late 1800s.

Although the area has been partly invaded by more recent development, there is still a significant historical identity within the precinct.

**St. Marks (on the Main Street)**

Immediately north on the riverside of the main road is a small precinct of the St. Marks Church of England with its Sunday School and cemetery which were established before the town in 1851.

**Uniting Church (on the corner of Nairne and Tolmer Roads)**

This small area includes the former Methodist Church and Sunday School buildings which date between 1851 and 1862.

**The Gables (at the entrance to Woodside from the Nairne Road)**

This small complex was originally two small cottages built in the 1850s but they have been extended since.

**BALHANNAH (Figure 48)**

Balhannah was the first township to be subdivided in the Onkaparinga District in 1839, just three years after settlement in South Australia. The adjoining subdivisions of Gilleston and Blyth Town were not surveyed until the 1850s (Figure 47).

Balhannah is the real gateway into the Onkaparinga Bowl from the south-east and it is located at the convergence of routes from Verdun, Carey Gully, and Nairne.

The entrance to Balhannah from Verdun is through rolling hills that suddenly open out to the grazing lands of the valley and gives an almost uninterrupted view of the surrounding low hills dotted with small stands of native trees. The entry into the township is an immediate entry into Balhannah's past with the sighting of the old rail bridge, St. Thomas's Anglican Church and a number of restored cottages. The route from Carey Gully winds through medium hills of a rural countryside, and the township is suddenly revealed as one travels around a bend. The entry to the town is through a mix of new and old dwellings with a recently-built shopping centre to the left.

Travelling from Littlehampton to Balhannah small areas of vegetable growing provide interesting breaks from the pastoral activity which dominates much of the landscapes. There is an almost unheralded entry to the township itself and the first view is captured by the hotel on the corner of Junction and Onkaparinga Valley Roads.

Balhannah originally consisted of three separate subdivisions - Balhannah, Blythtown and Gilleston. The original subdivision laid out by James Thompson for Balhannah did not prove successful and the allotments were resubdivided and combined to form larger holdings. These have merged with the adjoining subdivisions around Balhannah to create the framework for the existing town form.

During the 1970s there has been considerable peripheral subdivision to the east of the main road but the original core of the town was never fully developed and so it has retained an open, semi-rural character which contributes to its charm. There are still many buildings of historical significance in

**Figure 47** Early subdivision plans of Balhannah and Oakbank based on J Chapman Lovely's re-survey in 1870 (see Tables 7 and 8, Appendix D)

Balhannah, particularly in this core area where the Nairne, Onkaparinga Valley and Junction Roads converge to create a trapezoidal form which characterises the township's physical structure. Buildings within this core form an interesting historic precinct which illustrates the range of services provided by Balhannah during its earlier growth.

In 1883 Balhannah was linked by rail with Adelaide and for many years the local station remained as an important railway centre for the district and attracted small industries to the township. In 1914 Australia's first cold store was built here and is still being used by the Balhannah Cooperative Society.

In present day Balhannah the land use is strongly oriented towards its residential functions and of the land south of the Onkaparinga Valley Road 85% is residential and of this 20% has been occupied from 1970 onwards. An area around Glebe Street contains commercial and retail uses including the Apple Growers' Cooperative. Bridge Street features a new shopping precinct and a Methodist Church although the surrounding areas are mainly residential. The eastern side of Main Street contains the older commercial area with the post office, general store and a few smaller shops of the same era. Towards Oakbank is located the Johnson Memorial sporting grounds and opposite is a residential area characterised by contemporary subdivision layout.

For such a relatively small township Balhannah is particularly rich in buildings with both architectural and heritage value:

**The Junction Area (of Nairne Road, Main Street etc.)**

As a main focus this area has fortunately retained some significant buildings in a major historic precinct. The Golden Cross Hotel (1849), the Balhannah School, St. Thomas' Anglican Church and accompanying schoolhouse, and the general store are important contributors to the precinct.

**The Railway Station (600m south-east of the township)**

This contains the 1883 built complex of the railway station and the stationmaster's house.

**Merridong Precinct (500m towards Oakbank on the Valley Road)**

This contains the original Merridong Cheese and Butter factory first built in 1894, with alterations to its existing use as a garage in 1929. Merridong house dates back to the turn of the century.

**Balhannah Cooperative (500m south-west of the township)**

Important as the first cold store built in Australia in 1914.

**OAKBANK (Figure 49)**

Oakbank lies but a short distance north of Balhannah on the main valley road. The township is located on the relatively flat river plain so that the surrounding countryside is more open than that of Balhannah and thus the township is more visible.

Travelling towards Oakbank from Balhannah the landscape is

mainly small rural holdings interspersed with farmhouses and some roadside residences. Oakbank Area School dominates the right-hand view on approach to the township, while the Onkaparinga River itself is on the left. The surrounding land is covered in quite dense vegetation with small stands of eucalypts, and the distant hills are wood covered. As one approaches the township dwellings and commercial activities flank each side of the main road, signalling an abrupt entry into Oakbank.

The approach from Woodside is through open fields studded with eucalypts and, nearing the town, a large avenue of plane trees announces entry to the township. To the right Oakbank House, well back from the main road, the adjacent racecourse and picnic grounds provide a compelling vista.

Oakbank lies lower in the valley than Balhannah and therefore the town structure and the rural surroundings are more visible as one enters the township. The terminal vistas from within the township are less spectacular but it is an important characteristic of Oakbank that there are transverse swathes of agricultural land, with minimum interruption at the roadside, stretching across the township from west to east. These rural swathes open up to reveal the rolling countryside beyond the town's centre.

Oakbank, subdivided in 1855 (Figure 47), developed as a private company town of which the major feature was the Oakbank Brewery built by the Johnston family as well as the two elegant houses on either side of the town - Oakbank House and Dalintober. Unlike the Johnson brewery which is hidden from view in the western sector of the township the original Dorset brewery, later converted to aerated waters by Henry Pike, commands a prominent position in the main street which is the strongest element in the linear form of the township, and of the commercial centre.

The commercial ribbon development is partially surrounded by residential areas but only on the northern side do these continue to hug the main road towards Balhannah. Close by to the commercial area towards the north-east is a non-residential quarter taken up by the racecourse and the brewery, and, apart from this, there are only a few non-residential uses located in some side streets such as the bowling club, the petrol depot, and a restored commercial site.

For its annual Easter racing carnival Oakbank is one of the best known small townships in the State, if not in Australia, and this has played an important role in the preservation of at least the major historic precinct:

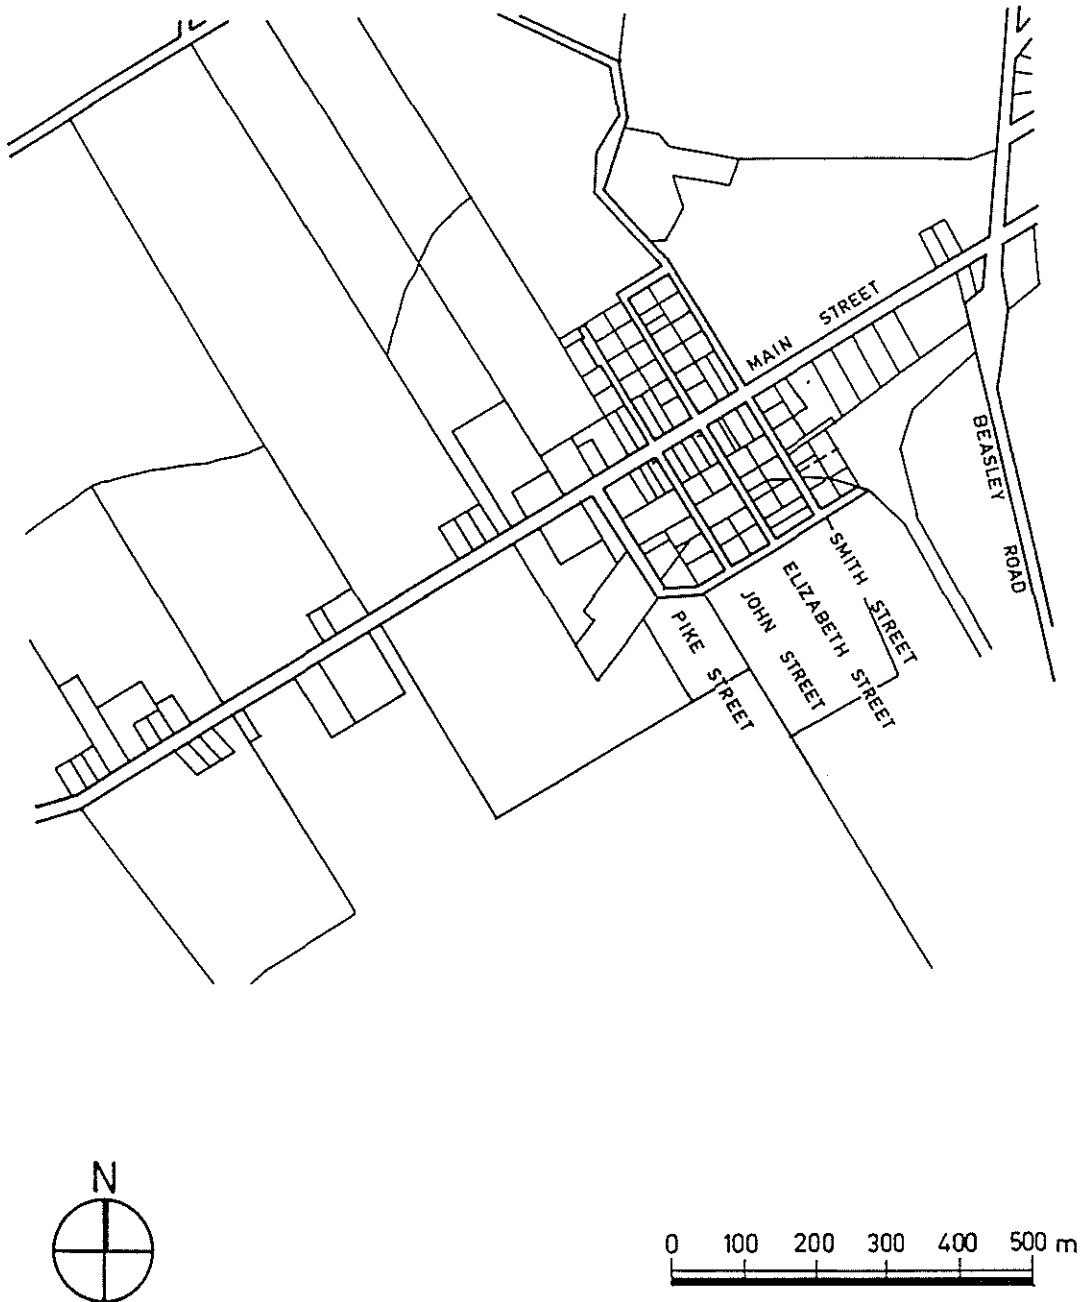

#### **Racecourse Precinct (adjacent to the main road)**

The first race was run in 1867 and in recent years the racing area has been well-maintained and developed. In a prominent position alongside is Oakbank House.

#### **Johnson's Brewery (adjacent to racecourse)**

The Johnson brewery complex, now preparing aerated waters.

Figure 49 Plan of Oakbank, 1983

**Main Street precinct**

This area contains a number of important heritage items but in its present form is not a contiguous precinct. On the eastern margin of the area are located old jockey cottages, other dwellings and an antique store. On the northern side of Main Street is the original Pike House (1866), now used by a real estate agent.

On the southern side are the old schoolmaster's house and kindergarten. An important portion of this precinct is the extension into Elizabeth Street occupied by the former Pike brewery, now the Oakbank Weavers, and the Wright Memorial Church building, now used by the Boy Scouts.

## CHAPTER 13

Pioneer Buildings of the Onkaparinga District Council

Gordon Young

**Early Settlers and Their Building Traditions**

The first Europeans to erect temporary shelters in the Onkaparinga valley were the shepherds and stockmen of the South Australian Company. Ferdinand Mueller and Charles Newman were both shepherds working for the company. The latter tending his flocks in the Charleston area erected a gum-slab hut on Mount Charles.<sup>1</sup> The former who arrived on the 'Skjold' persuaded the German settlers who came with him to settle in the Lobethal valley which he discovered in 1842 whilst tending the company's flock there. Although he was resident at Hahndorf at the time he probably would have used a rough slab hut in the valley when looking after the sheep. Samuel Day was a company stockman driving cattle into and through the area; it is almost certain that he would have used similar rough accommodation when droving. Later he took up land to the east of Balhannah and settled down to farming.

All of these company employees and the settlers who followed them came from rural backgrounds in Europe where building traditions which stemmed from the early Middle Ages were still being used. Newman and Day were both from Somerset in south-western England, an area of fine stone buildings but where earth walled structures (cob work) were still being built. The older farm-houses in this part of England with their adjoining shippons were derived from the Celtic long-houses commonly found throughout north-western Europe. This house form produces a cross passage generally off-centre on plan through which both men and animals entered the building.<sup>2</sup>

Later the animals are removed to shippons connected to or separated from the houses and the byre end becomes store rooms for ale and dairy products, screened from the Hall end by a timber screen. A similar house-form developed in Germany. This was the Franconian house where the common entry and cross passage persisted until the 18th century. However in this case the passageway also included cooking hearths. Subsequently the animals were located in separate buildings and their byres became storerooms or extra living rooms. It was this kind of house which the first German settlers brought with them to South Australia, examples of which can be found at Hahndorf and Lobethal (both these settlements were located within the boundaries of the Onkaparinga District Council when it was formed in 1853). Another more primitive barn-house (baurnhof) where a family and its animals were housed in the same building was very rarely found in these German villages. According to Mr. C.A. Pfeiffer his great, great grandfather Johann Freidrich Pfeiffer built a two storey house and stables in the mid 1850s at Schoenthal which may have been similar to Mooney's Barn near Hahndorf, a rare example of this kind of house, which still remains.<sup>3</sup>

The majority of the first settlers in the area, both

British and German, were either farmers, farmworkers, or rural artisans coming from remote country areas of Europe.<sup>4</sup> They and their forbears had suffered hardship and poverty for centuries. Those from southern England had seen this intensify in the late 18th century with the acceleration of the Enclosure Acts, which left a large body of itinerant farm workers largely supported from the poor rates. They could only afford dwellings built of the flimsiest of materials such as wattle and daub or rough earth walling.<sup>5</sup> The Irish and Scottish migrants were often highland crofters whose houses were primitive structures of stone and peat blackened inside by open peat burning hearths. Our studies of German settlers tell a similar story of hardship and poverty made more unbearable by an oppressive government which persecuted religious dissidents and demanded years of military conscription from its young men.<sup>6</sup>

Arriving in an even remoter and primitive environment it is not surprising that they all continued to build with (for a time at least) their ancient building techniques which they adapted to the new setting.

#### The Gum-Slab Hut

This was used by the majority of settlers when they first took up land. It consisted of roughly sawn or split thick red-gum slabs fixed to squared top and bottom rails supported by four earth held posts. A stone or brick chimney over an open hearth and white-washed hessian nailed to the inside of the walls and ceiling were the other simple elements which graced this structure. Thatch or bark roofs secured by wire and weighted down by external timbers covered crude roof frames built of tree branches. Later these temporary dwellings were either abandoned, used as outbuildings or surrounded by more permanent constructions and incorporated into larger dwellings. Similarly framed slab covered barns and other outbuildings completed the typical pioneer farmstead.

A late example of a pioneer's cottage is to be found on Section 24 off Kumnick Road. Although this was built about 1914 with modern timber framing and galvanised iron it has a unique stone and clay cooking hearth in its back lean-to connected to an external timber and clay lined chimney. This cottage is still lived in and the clay hearth and chimney is in constant use today!

After the early settlers had established themselves on their properties they began to build more substantial buildings.

British settlers generally built two-roomed cottages with back-lean-tos which incorporated a kitchen and cooking range (Figure 5). On larger farms separate farm kitchens in the British tradition were erected (e.g. the Edwards farm at Oakbank, Figure 4). Whilst the majority of German settlers in the Lobethal-Neudorf area built half-timbered two roomed cottages with back-up hearths accompanied by substantial stone and timber barns (Figure 8).

Whenever there was the financial means and assurity of freehold the settlers built with more permanent building materials.<sup>7</sup> Mostly this was in brick or stone but early walling techniques such as adobe and cob and pisé-de-terre as

well as properly framed half-timbered buildings can be included in this category. The earth fast post and frame construction used for building slab huts was also employed with more permanent building materials. Many substantial houses and barns were erected in this manner with the corner and centre posts either surrounded by stonework or mortared over to match the surrounding masonry.

Very often buildings would include a combination of constructional techniques with solid brick or stone walling for the front rooms and post and slab walling to the back lean-to.

#### Evidence of Transposed Vernaculars<sup>8</sup>

One of the most significant properties in the district is Gumbanks, at Charlestone which was built in the mid 1840s by William Dunn who came from Devonshire. Although he built a palladian designed cob house this was still closely integrated with the farmyard and its buildings and the whole ensemble was set back from Newman Road. Therefore when approaching the farm it is the barns which come into view first (Figure 10).

This is an ancient design of farmstead related to the vernacular buildings of south-west England and there are other examples of similar farm layouts in the Onkaparinga district. One of these is the Edwards farm at Oakbank where the approach is dominated by the stone barn built in 1858 alongside the main Balhannah-Woodside Road. The farmhouse which has since been surrounded by modern additions was set at the back of the farmyard. Its original shape has been identified from a study of the house plans and with it the independent farm kitchen (Figure 4). About the same time another substantial brick farmhouse was built by John Williams near Mattners Road east of Balhannah, which had next to it a stone barn and dairy. The two buildings with their high pitched roofs are almost identical and they are set well away from the main road. Again the relationship of the buildings in this farmyard suggests a much more ancient type of farm layout unaffected by palladian design ideas. In fact this particular ensemble of buildings is much closer in design to the farmhouses and barns of the German settlers who also erected buildings little affected by classical ideas (Figure 3).

Another group of settlers, probably of Scottish origin, built several substantial stone cottages in the scattered community around Murdochs Hill. These may have been used by stockmen working on the large pastoral properties in the area (e.g. Thomas Inglis' Sandy Water Hole). A house off Murdoch Hill road owned by Mr. and Mrs. P. Kaethner has incorporated within it a two roomed stone cottage built of random stonework with a large end chimney serving a cooking hearth. This has an adjacent bake-oven (Figure 50). Further research is required to see whether this building can be related to an equivalent Scottish vernacular style.

German settlers to the Onkaparinga district brought with them building traditions quite different from the other settlers. Although many of their houses were just simple two roomed dwellings with back to back cooking hearths others were grandly planned cooking-hall houses (flurküchenhaus). Several

such houses were built by members of the Schubert family at Schoenthal near Lobethal and at Springhead near to Mt. Torrens (see *Lobethal Survey*, pp.204-211). On first appearance these buildings seem to be symmetrically planned with central halls and entrance doors but this camouflages the considerable differences between them and the palladian house plans of the English settlers. The halls were built for the functional purposes of cooking in particular for the preparation of pork products (i.e. ham and sausage curing) and not for the display of the family's artistic possessions!

Only one example similar to a traditional long-house has been identified. This is No. 54 Mill Road, a half timbered house built in two stages and aligned down its farm allotment (hufe). The first building stage had wattle and daub panels whilst the addition was panelled with bricks. (See *Lobethal Survey*, pp.47-49).

Many of these farmhouses can be easily identified by their high pitched half hipped roofs and double central chimney. Their attics which generally extended the full length of the building were mainly approached by outside staircases and lit by small casement windows in the end gables (dormer lights were rarely used). Only in the larger houses does one find ladder stairs leading up to the attics from the central hall (e.g. The Schubert house Springfield).

Apart from some symmetrical elevations and the panelled double entrance doors there was little evidence of classical design elements in these buildings. However a well preserved timber cottage at No. 5 Woodside Road built about 1866 by Mr. Grimm, a German immigrant carpenter does indicate that classical traditions were by then well established in the timber architecture of eastern Germany.<sup>9</sup>

#### Palladian or Georgian Style Building

Although the British settlers continued to employ some very ancient building techniques their house designs were dominated by theories of building derived from Italian renaissance architecture.<sup>10</sup>

This is clearly illustrated by 'Gumbanks' where the house was a symmetrically designed Palladian house and not a copy of a traditional Devonshire longhouse (see *Lobethal Survey*, pp.191-199). During the late 17th and early 18th century the British aristocracy and rising middle classes abandoned the outmoded half-timber buildings of their forbears. They began to reside in symmetrically planned brick and stone houses built either on their country estates or as town houses in London and the provincial capitals. The brick house became the most common type of house especially after the Great Fire of London had created a demand by insurance companies for more fireproof dwellings. These soon spread throughout the southern and eastern counties and were often dubbed 'London Boxes'!

Large squares and terraces of 2-4 storey houses appeared in the towns, which were usually built on land owned by leading aristocrats or mercantile entrepreneurs. The houses were subject to quite rigid building and planning restrictions as the land was normally leased by its owner for a period of 99

Several houses in the Murdoch Hill area may have been built by Scottish settlers. This recently renovated building was probably first built as a two-roomed cottage (see Figure 50 for plan)

Figure 50 Plan of early settlers house, Murdoch Hill, showing typical Scottish 'but-and-ben' form

Sketch of hearth and adjoining area in kitchen/living

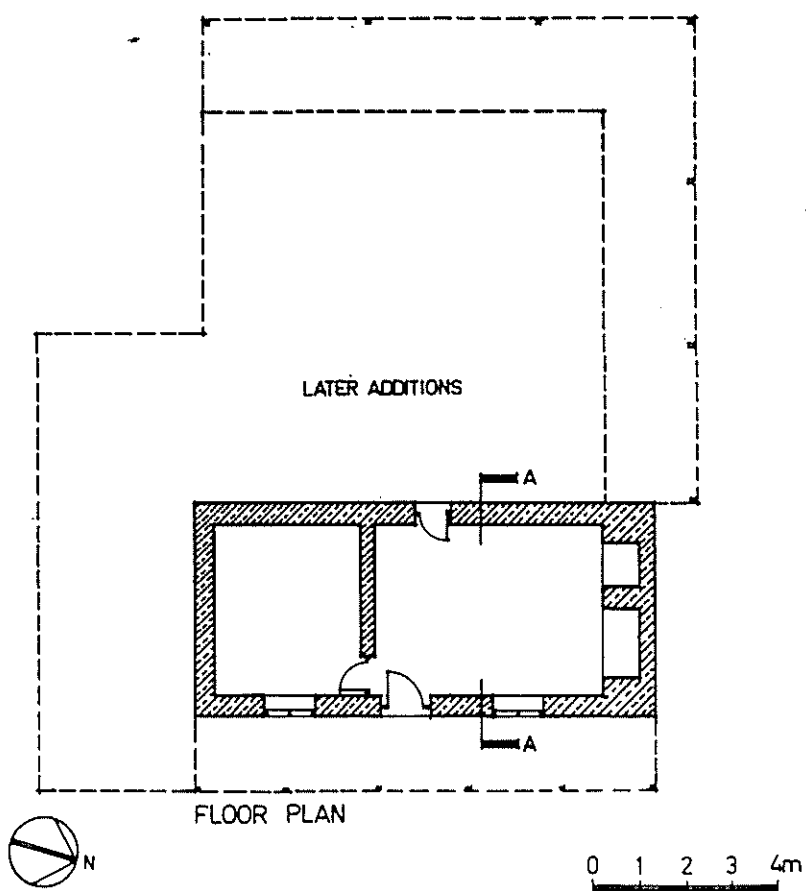

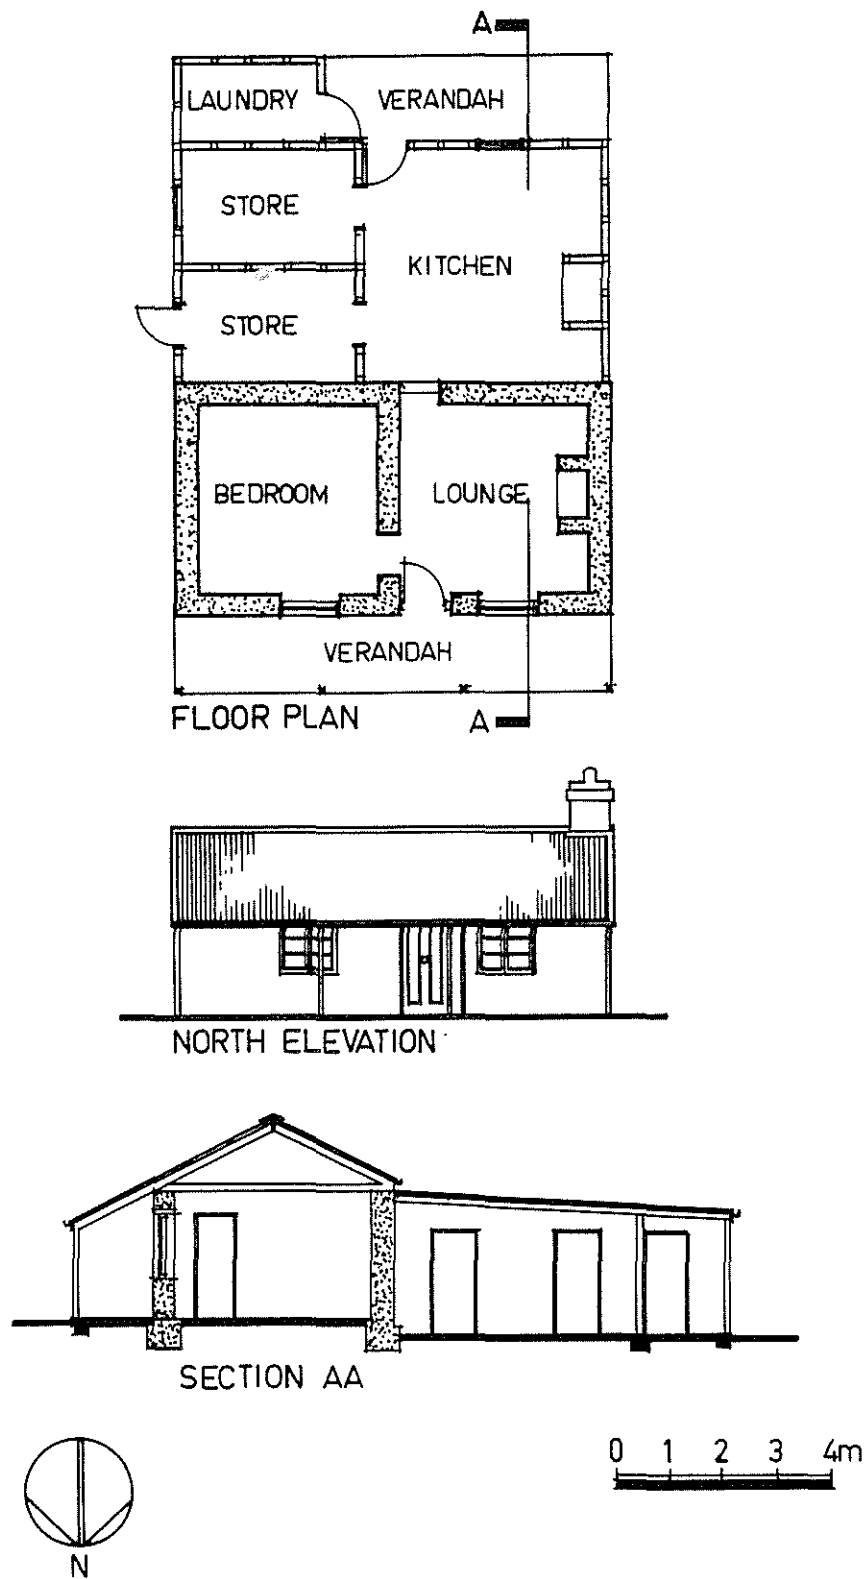

Figure 51 Pisé cottage, Forest Range, with lath and plaster

years. This created very standardised house plans throughout the country, many of which were copied from the numerous 'pattern books' which began to proliferate from the late 18th century onwards.<sup>11</sup> By the time South Australia was settled Palladianism was the established mode of design for a variety of buildings. However, its precepts were being challenged by a new generation of dilettante designers who became interested in a much wider range of design styles. On the one hand these arose from a romantic interest in Medieval life and architecture and from travellers visiting and appreciating the traditional buildings of England, France, the Alps and North Italy (thus Gothic and Tuscan influences began to appear in the design of buildings). On the other hand Greece by the late 18th century had become accessible to visitors, and this created a revived classical style, the *Greek Revival* (it resulted in simple villa and town houses with plain Doric columns to front entrance doors and porches and wide ashlar stone door and window architraves). At this time the more concerned gentry began to provide 'ideal' villages for their farmworkers. These sometimes included farm cottages designed in a classical style with semi-detached plans, or more romantically designed cottages decorated in an ornate Gothic manner (*cottage orneé*). The appearance of French encyclopedias on rural husbandry before and during the revolutionary period (1789) stimulated an interest in traditional and economic building techniques. One of these which was recommended for use in rural housing was *pisé-de-terre*, an earth walling technique using timber shuttering similar to that used today for in-situ concrete.<sup>12</sup>

English examples of building encyclopedias began to appear in the early 19th century. One of the most influential was J.C. Loudon's *Encyclopedia of Cottage, Farm and Villa Architecture*, first published in 1833 in London and republished in 1846 and 1853. Such widely available books quickly spread the new theories of design which were developing as well as consolidating a knowledge of palladianism in the burgeoning middle and artisan classes. They also helped in the rediscovery of traditional building techniques suitable for use by the less fortunate classes or aspiring colonists! What is clearly evident is that a considerable number of buildings were built in Adelaide during the first two decades of settlement using some of these (e.g. lath and plaster).<sup>13</sup> Later similar constructions were employed by colonists moving into the rural areas of the state and they appear in the Onkaparinga district from the 1840s onwards. The remains of *pisé-de-terre* and lath and plaster buildings are found throughout the district (Figure 51) and they were still being built in the 20th century (e.g. a lath and plaster cottage was erected in 1903 as a retirement home for the elderly Mr. and Mrs. Edward Klopsch on their farm at Neudorf).

In the *Tiers* (Forest Range) the primitive timber huts which were first built by the wood cutters who settled in the area were later replaced by economically built *pisé-de-terre* houses when the settlers took up permanent residence and became orchardists. Many of these simple buildings were rendered over

Lath and plaster walling showing stone infill

External render to lath and plaster wall

Figure 52 Timber house with ashlar timber panels, Langbein Street, Woodside

Apple-Tree Cottage off Oakwood Road, near Oakbank. A simple two-storey palladian design house typical of eighteenth-early nineteenth century cottages found in southern England.

and lined out to represent Ashlar stonework, the preferred type of stone walling for residences with some pretensions to style! A continuation of this 'politeness' occurs in later 19th century timber framed houses built in Lobethal and Woodside where their front elevations are clad over with squared blocks of wood to represent Ashlar work. (No. 1 Main Street, Lobethal and No. 8 Langbein Street, Woodside, Figure 52). Other timber houses in the district were covered in the newly available galvanised iron and had pressed metal panels on their front elevations representing stonework (e.g. a cottage on a workingmen's block at Size Road, near Oakbank).

As previously stated the most commonly designed cottages built by settlers after they had become established were two or four roomed single storey residences symmetrically planned with a central hall and backend lean-to's (e.g. a cottage on the Wicks property near Balhannah, Figure 15). Although very simple buildings, their sash windows and panelled front doors are a reflection of much grander Palladian counterparts in the United Kingdom.

Wealthier colonists still preferred to build two storey houses with central hallways and staircases. Woodlands in Elizabeth Street, Woodside, is a fine example and there are similar houses located along Newman Road at Charleston (See *Lobethal Survey*, p.175). An elegant but smaller example of this type of house only one room in width is Apple-Tree Cottage (Figure 53). All of these houses are quite plain when compared to the handsome Johnston brothers villa houses which they built at Oakbank in the late 1860s. James Johnston's 'Oakbank House' was built of bluestone with rendered detailing and the jutting ground floor salon with principal bedroom over is typical of many late 19th century suburban villas to be found in Adelaide's suburbs. The fine proportions of the front elevation is fully appreciated as one approaches the house down its long avenue of gum trees. In contrast Andrew Galbraith Johnston's 'Dalintober' is a lively rendering of an Italianate villa (Figures 29-34) set on a rise in the southern part of the town with extensive views over the surrounding countryside. Its main approach is along a curving driveway which opens up to view a beautiful English garden. The elaborately planned wings of the house include a large bay window with a canopied first floor balcony over it. Protecting it from the sun is a two storey cast-iron balcony on the north elevation and a single storey one on the last elevation both of which have winged dragon motifs. The ironwork was imported from Walter McFarlane's Saracen Foundry, Glasgow, the city from where the family migrated.

The Newman farm (Blackford) at Charleston is typical of those new or rebuilt farmsteads erected in the British Isles during the late 18th to early 19th centuries which began to separate their new palladian houses from the other farm buildings. Formal gardens were often placed in front of them and were separated from the more functional kitchen gardens. This 'polite' response can be seen at Blackford where the house faces onto Newman Road from which it is slightly set back. In front is a small garden enclosed behind a high stone wall built along the street alignment. Located behind the house is a

Figure 53 Plan of Apple-Tree Cottage

small back yard and at a distance up the hillside a blacksmith's shop whilst other farm buildings lie away from it down the road leading to Charleston (Figure 6).

#### Villa Housing

Although the simple double fronted palladian house persists in the area through the 19th and into the 20th century it is matched by other houses which are a reflection of the villa styles common to Adelaide and other British cities.<sup>14</sup> In the majority of cases the centrally planned hall is retained and all that occurs is an extension of the major front room or salon. At the side of this extension the remaining elevation is covered by a short verandah, sometimes continued around the side of the house. Bay windows or bay like ends to the projecting salons are also characteristic. The decoration to the front elevations although more elaborate than on the side and back elevations is still discrete, palladian influences often persisting or some 'Gothicky' gabling is introduced reminiscent of the earlier cottage orneé rather than of a true gothic revival style. (Later in the 19th century this gothic mode is elaborated to include decorative brick detailing and panelled timber gables). Several houses of this type are to be found in the district, and one is illustrated in Figures 55-56.

The concern by the early settlers for an education for their children (as noted previously a considerable number of schools were opened in the district in the first two decades of settlement) indicates the increasing literacy of the general population in the mid 19th century. Books, popular periodicals, and the mechanics journals imported from the United Kingdom were avidly read. Some of these texts such as R.S. Burns *The Colonists and Emigrants Handbook of the Mechanical Arts* published in 1854 were specifically written for the colonial readers whilst other more technical publications like the *Builder*, published in London from 1842 onwards began to have a direct influence on the design ideas of colonial architects and the constructions of colonial buildings.

#### Public and Commercial Buildings in a Late Palladian or Neo-Classical Mode

During the early 19th century a variety of new building types began to appear in Britain which were designed in a neo-classical style of architecture (e.g. Sir Robert Smirkes British Museum begun in 1824). A fine example of this type of building is the Courthouse at Woodside. A strictly ordered classical building, it is set well back from the road and hides from view the adjoining police station and jail which were built in the less imposing cottage orneé style. This is another polite response to an architectural setting which can be compared with the description of the Newman property described above. An earlier neo-classical building is St. Johns Church at Lobethal, completed in 1845, and illustrated in Figure 36. Another excellent example of industrial architecture designed in a neo-classical manner is the Grünthal Mine buildings, built in 1872 (Figures 18-19).

Villa house built on a working man's block, Gillman Road, Oakbank, in 1901. Working men's blocks were created through a State Government scheme first introduced in 1855 to alleviate problems faced by farm labourers with irregular or poorly paid employment. Public lands were subdivided and tenants were expected to establish a degree of self-sufficiency prior to their subdivision. In 1887, Sections 5001 and 5003 to 5005 of the Hundred of Onkaparinga which had originally been nominated as an Aboriginal reserve were subdivided. The newly created blocks were found to be of too small an acreage for their intended purpose so were leased in groups to form large holdings. A Green, Onkaparinga District Council *Heritage Survey*, area 10.

### Gothic Revival Buildings

The appearance of Christian revivalist movements in the 18th century heralded a new attitude in society which culminated in the devoutly religious and family orientated society of the Victorian age. This religious revival was accompanied by an interest in historicism and romanticism in the arts. In 1835 Augustas Welby Pugin, an English architect of French descent, put forward his theory that to build in a medieval style was a moral duty. This added the stamp of approval to a movement that had already begun.<sup>15</sup>

Very little Church building was carried out in the 18th century and the first congregations of the Christian reformists were held in large private houses or in simply designed (palladian) meeting halls. However much larger church congregations were appearing by the early 19th century and the British Parliament passed the Church Building Act in 1818 leading to the building of 174 churches in an economical Gothic style.<sup>16</sup>

Churches, and their vicarages began to be built in a simple Gothic style, which is illustrated by the design of the Primitive Methodist Chapel opened in 1866 on Scottsburn Road at Murdochs Hill. This simple gabled building has romanesque semi-circular windows and door openings and is similar to another Primitive Methodist Church built in 1851 on Nairne Road, Woodside. The first Anglican Church which was built at Woodside in 1851 was a similar stone building but with pointed arched windows, therefore expressing a more 'correct' Gothic mode of design (a 'correctness' which appears in the later Methodist Church on Nairne Road, built in 1862 - see photographs in Chapter 10).

The design of the first Lutheran Church built in the valley, St. John, Lobethal, dedicated in 1845, has design elements more characteristic of the neo-classical styles of the late 18th early 19th century (see previous page). This contrasts with the church of St. Petri built by the Lutheran congregation at Woodside in 1865, which is a rather clumsy building with its square towered porch and heavy corner buttresses. However, it is a fairly rare example in the district of a church design based on Saxon or early Norman styles.

From the time of Ruskin (1850)<sup>17</sup> a more academically correct approach to the design of Gothic revival buildings began to be practised by British architects. This can be seen to a degree in the design of the new St. Marks of England Anglican Church opened at Woodside in 1885 and in the original Wright Memorial Church which was built at Oakbank in the late 1880s. These can be compared to the rather whimsically designed St. Thomas' Anglican Church in Balhannah built in 1865, with its unusual combination of segmental, semicircular and triangular window heads, Gothic revivalist designs also occur in the case of the derelict Inverbrackie Church, the second church to be completed in the valley 1849 (Figure 38). Its Manse, built in 1858/9, was also built in a Gothic style (Figure 39) as was the early schoolhouse at Balhannah, also completed in 1858 (Figure 41).

Castellated timber detailing, Balhannah Railway Station

The Gables, No 47 Nairne Road, Woodside

### Later Medieval Revivalist Styles in the 19th Century

William Morris and his company of designers probably had the greatest influence on the interior design of late 19th century and early 20th century houses in Britain and her colonies.<sup>18</sup> This can be seen in the introduction of elaborately designed wallpapers, ornate timber and tiled fire surrounds and the use of leaded stained glass panels in windows and doorways. It appears also in the substitution of timber detailing for cast ironwork in verandah frameworks and with the introduction of conservatories adjoining the main living area.

These influences appear in some of the larger houses in the Onkaparinga area, such as the 'Gables', No. 47 Nairne Road, Woodside. This house illustrates how an earlier settlers cottage was gradually extended into a fine mansion decorated in a late 19th century *arts and crafts* style.

From this time onwards the different housing styles mentioned above continue to be used well into the 20th century (e.g. the 'Tudor' styles of the 1920s) and it is not until after the Second World War that the contemporary house appears.

During this period the architecture of public buildings is also quite conservative and they reflect design influences stemming from overseas. Thus the new Government school at Oakbank has Gothic elements which can be related to the work of the late 19th century British architects such as Norman Shaw. The Lobethal Institute building erected in 1904 has something of the latter's Queen Anne Style.<sup>19</sup>

A style of design which precedes the modern architecture of the 1950s is Art Deco.<sup>20</sup> This is largely an architectural stylism derived from interior design and modern industrial design. A rather tentative example of it is the new cinema built at Lobethal in the late 1930s.

### Industrial Architecture

Most of the factories built in the 19th century industrial towns of England and America were strongly influenced by Palladian design principles. This produced some handsomely proportioned buildings of a simple classic style. Such a building was the Lobethal Tweed factory which was built in the 1870s, the front wall of which still remains within the present day Onkaparinga Woollen Mills.

The Johnstons' brewery and mineral works at Oakbank is a complete ensemble of industrial buildings stemming from the mid to late 19th century. These are dominated by the old brewing tower and represent a very historical assembly of industrial premises set in a beautiful landscape similar to that found with the industrial villages of the Pennines of northern England. Nearby the brewing tower of the Pike brewery still stands amongst some of its original storage sheds and is an even finer edifice with its decorative facade panels of brick and stone (Figure 35). Both of these brewery buildings share design qualities reminiscent of former Tuscan houses, which are found in the region around Florence, Italy.

Another very important group of Industrial buildings are the crushing plants and mine chimneys of the Balhannah and Grünthal Mines. The former is a complete ensemble of simple

Georgian-like buildings lying off Greenhill Road whilst as noted previously the latter is a superbly designed ensemble of buildings in a neo-classical mode located off Beaumont Road, Verdun.

The other fine late 19th century industrial complex left remaining in the area is the Balhannah railway station with its cottages. The castellated timber detailing of the station waiting rooms are reminiscent of the early 'Gothicky' revival styles found in England during the late 18th and early 19th century.

Workers' housing was either provided or sponsored by some of the industrial magnates in Britain's northern industrial towns. A classic example of this was Saltaire, an entirely new town built near to Bradford in 1853 by Sir Titus Salt, a woollen magnate.<sup>21</sup> A similar project was the proposed township of Reefton Heights which is illustrated in Figure 24. Small scale examples of workers' housing in the Onkaparinga district are illustrated by the cottages in Main Street, Lobethal which adjoined Kumnicks brandy distillery (see *Lobethal Survey*, p.54) and the fine group of stone built terrace houses in Moffatt Street, Woodside (Figure 25).

#### Oakbank: a company town

This is a small privately laid out township which was built in relation to the Johnston brothers' brewery. The first portion of the town was laid out north of the Woodside Road in 1855, and the southern portion was developed later and included the Pikes' Dorset Brewery. Although this company town was not as complete as Saltaire, whose foundation is preceded, it appears that the Johnston family were considering a development along similar lines. This is illustrated by an early subdivision plan still in the company's possession which was probably drawn in 1864 by R.R. Page, the architect for the new St. Thomas Church, Balhannah. The drawing is signed by Page, D.F.L. Apart from a subdivision plan there is a perspective view of the settlement with proposed public buildings (e.g. church, schoolhouse) (Figure 27). The way the town developed was very different from this idealised plan. Allotments were built on slowly and the town only took on a completed form by the First World War.

## Notes:

1. G. Young et al, *Lobethal 'Valley of Praise'*, p.120.
2. Ibid, p.183.
3. G. Young et al, *Hahndorf Survey*, Vol.1, p.189.
4. At this time those British settlers who came from the west country were quite isolated from London and the midlands area of England due to the comparatively long distances and very poor roads. Irish and Scottish settlers came from even more remote locations. The Germans were from outlying districts of Eastern Europe in the Prussian provinces of Brandenburg, Posnania and Silesia.
5. C.F. Innocent, *The Development of English Building Construction*, p.135. He notes that, "in the year 1809 in Leicestershire, road scrapings were considered to make the best mud for the walls of cottages." (The cattle and horse manure would provide good cementitious addition to the mix!)
6. G. Young et al, *Hahndorf Survey*, Vol.1, p.189.
7. We have found in our surveys that even single roomed houses were sometimes built of brick or stone (see *Lobethal Survey*, p.96).

The first Onkaparinga District Council assessment in 1854 confirms that where freehold occurred more substantial buildings were built (several owner occupied brick and stone houses are recorded in the Balhannah/Woodside areas). Whereas when the occupier was leasing his land from the S.A. Company the majority of buildings recorded were of slab construction.

8. Defined by Dr. R.N. Brunskill as 'that sort of building which is deliberately permanent rather than temporary, which is traditional rather than academic in its inspiration which provides for the simple activities of ordinary people, their farms and their simple industrial enterprises, which is strongly related to place especially through the use of local building material but which represents design and buildings with thought and feeling rather than in a base or strictly utilitarian manner.'

Quoted by R.J. Lawrence in *Vernacular Architecture*, Vol.14, 1983, p.19.

9. Symmetrical elevations and simple classical mouldings in timber are also to be found in late 18th and 19th century timber houses in Scandinavian countries and Russia. Similar classical detailing is found in timber farmhouses which were built in the west Canadian province of Saskatchewan by immigrants from Russia in the 1870s.

10. The design theories were introduced to the Court of James VI of Scotland (he later became James I of England) by Inigo Jones, an English designer who was trained in Italy. He had been particularly impressed by the work of the late 16th century architect Andrea Palladio who was noted for his villa designs in the area of Vincenza. The latter had written several books on architecture, a copy of which Inigo brought back with him to England and which helped him in the design of the first truly Italianate buildings to be built in the country - The Banqueting Hall, Whitehall Palace, and the Queens House Greenwich. Palladianism became firmly established after the restoration of the monarchy in 1660 (Charles II) and Jones's pioneer work was later recognised by the architects of the *Burlington School* (Lord Burlington), in the early 18th century when it became the established mode of design. These were the design principles embodied in the *Georgian house*.
11. Apart from the treatises on Architecture, which appeared in the Italian Renaissance, and coincided with the invention of printing, more practical books on architecture and building began to be published in European countries in the 18th and early 19th centuries. Such a book was Peter Nicholson's *New Practical Builder*, published in 1823. This covered all aspects of building work including detailed drawings of buildings and the Greek and Roman orders of architecture.
12. A building technique commonly found in the area of Lyons where it had probably existed since the time of the Romans.
13. In the first decades of settlement lath and plaster buildings were commonly used in Adelaide and many were noted on C. Kingston's plan of the city's buildings in 1842. They were probably similar to the ones discovered in the Onkaparinga district. These have earth fast posts roughly 600-900 mm apart with solid filling between them and are lath and plastered over on both faces.
14. John Nash, the Prince Regent's architect, created the first prototype suburb with his work in Regents Park London (1811-1828). Here apart from his famous terrace houses several huge villas appeared, which were later imitated by other architects and building developers when they began to build the first examples of suburban housing in London and Manchester (e.g. at St. Johns Wood, and Swiss Cottage London). Nash was capable of using with facility a variety of design styles including *Palladian*, *Cottage Orneé*, *Castellated Gothic*, *Tudor or Hindu!* (viz. the Regents Brighton Pavilion). He is the true predecessor of the Victorian architects who also delighted in using a variety of building styles to suit their and their clients' romantic whims!

15. N. Pevsner, *An Outline of European Architecture*, Pelican Books, London (1945), p.280. Pugin was an English Catholic whose father, also a designer, had fled from France at the time of the revolution. Pugin designed and carried out some fantastic commissions in a Gothic mode, his most well known work being the interiors of the Houses of Parliament for which he was the interior designer in partnership with Sir Charles Barry the country's leading architect at that time.
16. R.F. Jordan, *Victorian Architecture*, Penguin Books, London, 1966, p.72.
17. Ruskin continued the theme of the morality of Gothic architecture first propounded by A.W. Pugin. He was a writer and commentator on Victorian Arts and Society who had a considerable effect both at the time when he wrote and later.
18. William Morris was greatly influenced by Ruskin's theories but translated them into social reality. He was enormously versatile and worked as a painter, weaver, dyer, glazier, typographer, poet, merchant, and socialist. (R.F. Jordan, op.cit., p.174). He was not only horrified at the social degradation he saw around him in the new industrial society, but also in the cheapening of craftsmanship with the introduction of mass-produced goods, and 'objets d'art'. He was one of the first people to recognise the need for architectural conservation and he founded the *Society for the Protection of Ancient Buildings* in 1877.
19. Norman Shaw (1831-1912) was an eminently successful late Victorian architect who contrary to Morris fully exploited a variety of revivalist styles. He began by designing half-timbered Tudor and Queen Anne style homes and commercial buildings, finally he worked in the rather pompous Edwardian style. His influence was enormous as he was an excellent teacher and he trained many of the successful architects of the succeeding generation who were the founders along with some of Morris' disciples of the *Arts and Crafts Movement* (N. Pevsner, op.cit., p.213).
20. *Arts deco* is short for *Art Decoratif*, the title given to an exhibition of the modern decorative arts held in Paris in 1926. (*Exposition des arts decoratif*).
21. Saltaire was influenced by Robert Owens' theories of agricultural and industrial villages which he proposed in a *Report to the Committee of the Association for the Relief of the manufacturing and labouring poor* presented to the House of Commons in 1817. New Lanark, a co-operative manufacturing village he and others set up in Scotland at this time, embodied some of these ideas (see H. Rosenau, *The Ideal City*, p.131, Routledge and Kegan Paul, Boston, U.S.A., 1959).

## POST SCRIPT

Sir Hans Heysen and the Onkaparinga

Deborah Jordan

In the history of literature and art, creative endeavour is often linked with intensely felt affinity for regional environment,<sup>1</sup> and the name of Hans Heysen is indelibly connected with the Onkaparinga district and the country town of Hahndorf. Long regarded as one of the greatest landscape painters in Australia, Sir Hans Heysen embodied his vision of the central importance of the natural world with 'superb draughtsmanship, wonderful control of medium, handling of light, power of composition' and 'with an intense awareness of natural form and texture'. One critic has written of how deeply Heysen's vision has been imprinted in the national consciousness - 'that distinctive Heysen vision that led whole generations of Australians to see the gum anew'<sup>2</sup> - the Candlebark and the Manna gums of the Onkaparinga.

Born in 1877 in Hamburg, Hans Heysen emigrated with his family to Adelaide in 1884. After an education in Adelaide he worked in a saw-mill, a hardware store, and later, for his father. He studied art at James Ashton's Academy of Art before further study in Europe at the turn of the century. In 1908 with his wife (Sallie - Selma, nee Bartels) he moved to a small rented cottage in Hahndorf. Later, in 1912, after his successful second one-man exhibition in Melbourne he and his wife became joint owners of the Cedars, a 36 acre property out of Hahndorf. They had eight children.

His artistic career was highly distinguished: clients included Dame Nellie Melba, Professor Baldwin Spencer and the major national art galleries. He had a large number of successful exhibitions, won a number of important prizes and his work fetched high prices. He was a member of the Art Gallery of South Australian Board.

Other important localities in his work included the Murray River, the Flinders Ranges and places in Central Australia.<sup>3</sup>

Central to Heysen's creed as an artist was a belief in the unity of man, beast and nature, set against the inroads of civilisation of a world falling 'into a deep dirty morass'.<sup>4</sup> Heysen extolled the virtues of an outdoor life and more - for he had a pantheistic reverence for Nature, an intensely sensitive response to its finest nuances of form and colour.<sup>5</sup> In his wonder at life he drew spiritual and emotional sustenance from the natural world:

You cannot adopt knowledge in art successfully unless by your own personal experience you have made yourself ready to receive it.<sup>6</sup>

Heysen saw Nature as ever-moving and ever-changing and within the traditions of realism he attempted to record the ensemble, the impression, each note in the picture in perfect harmony and accord with the whole.<sup>7</sup>

As a youth Heysen had made frequent explorations in the

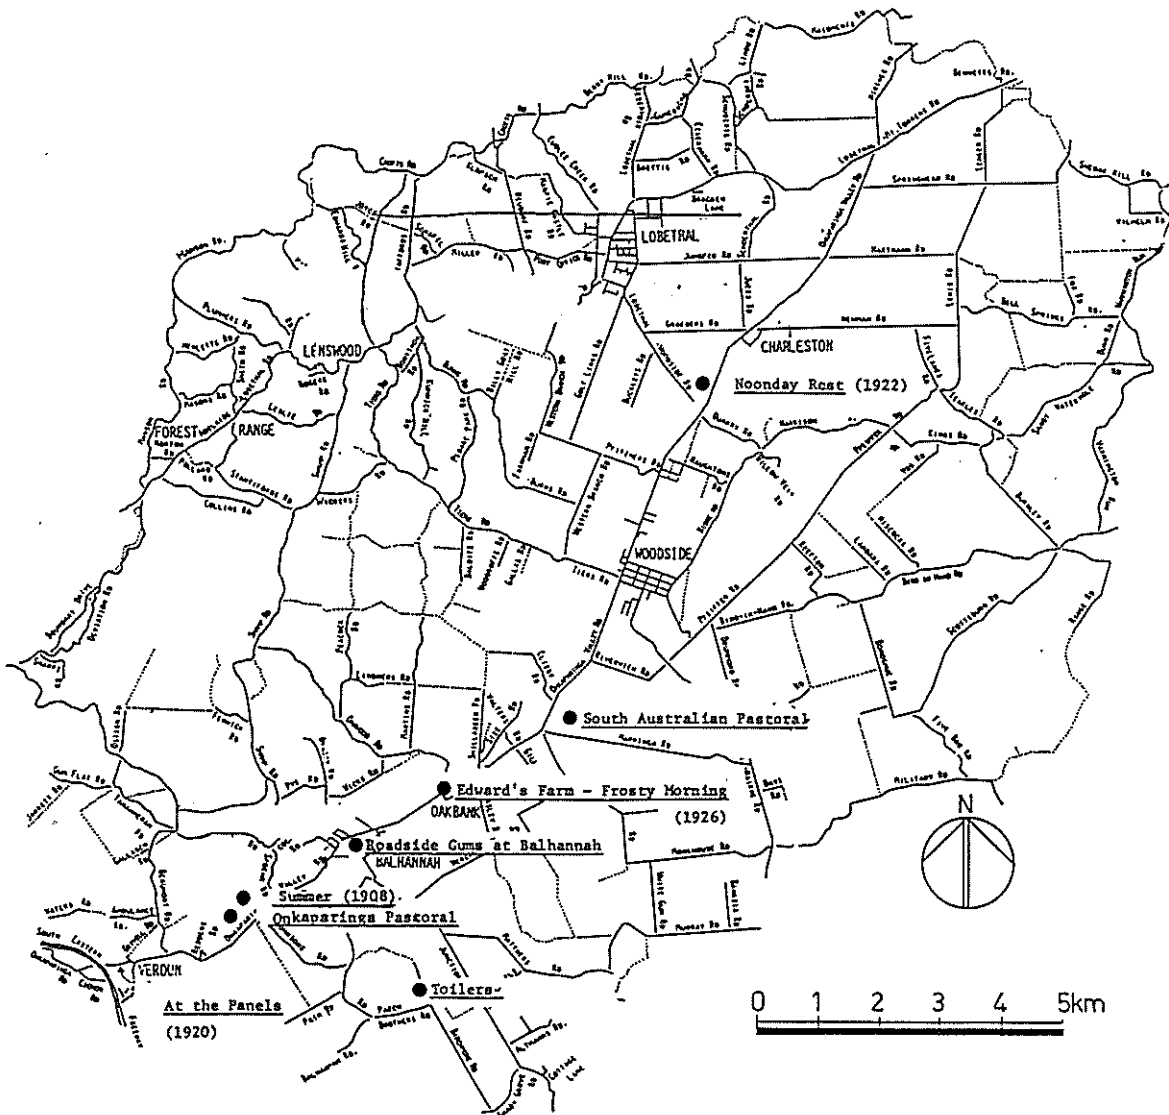

hills. As an adult he explored more deeply in the region - searching through the area for places of inspiration, such as the ancient gums in sunlight against the close contours of the hills in *Summer* (1908) (just behind Ambleside station)<sup>8</sup>, the giants at the gateway to Balhannah and the old schoolhouse in late afternoon shadow, *The Road* (1918) and the cattle at pasture in *At the Panels* (1920), just out of Hahndorf. Heysen took artistic licence in his famous *Red Gold* (1913) - the Mount Barker summit could not be seen from his vantage point on the Hahndorf-Mount Barker Road.<sup>9</sup> 'You feel', wrote Lionel Lindsay when he visited him in the 1920s, 'that his landscape he paints so truly lies very near his heart.'<sup>10</sup>

Heysen's deep response to the beauty of the natural environment moved him to action in conjunction with the Australian Forest League and to tussles with the council (mainly the Mount Barker Council) to preserve the trees in the area. He often paid the equivalent value for firewood many times over to preserve the same tree.<sup>11</sup> Photographs of some of these sites as they are today, 60 years later, starkly illustrate how changes to the scene over the years have eroded the visual quality of the landscape.

Heysen also painted the local working people in the region - at one with the soil and the perennial cycle of its seasons - and he got on well with them. With shrewdness and sympathy he captured the humours and tragedies of rural life, focusing always on their simple, homely dwellings (as in *Edward's Farm - Frosty Morning* (1926) and the interiors (as in *Edward's Barn*, Oakbank (1912) (charcoal) or the haystacks in a scene painted just outside Woodside: *Light and Shade* (1923)). He captured something of both the dignity and degradation of labour in *The Toilers* in 1920 on the naked hill (now fully housed) just out of Hahndorf. He counterposed the majesty of Nature with the resting labourer in the famous *Noonday Rest* (1922) just east from the Woodside-Lobethal turnoff.

Through his work and during his life Heysen offered to the people of the Onkaparinga a vision of the spiritual importance of the natural world, and in his art he has captured forever the rich heritage of the past and something of the lives of the working people and their essential unity with nature. And through his work, well-known throughout Australia, Heysen has transcribed and made visible the landscape of the Onkaparinga district.

## APPENDIX A

Onkaparinga District Council : A Detailed Chronology 1839-18931839-1871 Settlement and Consolidation

Annely Aeuckens

Peramangk: Onkaparinga Valley occupied by members of the Paramangk tribe who lived in the area from Myponga north to Gawler and Angaston; east to Wright Hill, Strathalbyn, Kanmantoo and along the eastern scarp of the range to near Witta. They practised circumcision and were at enmity with the Lake Alexandrina people.<sup>1</sup>

According to an early settler's recollections, the Country was then covered with kangaroo grass and there was no undergrowth of young gums as it was annually burned off by the natives leaving nothing but the majestic old gums, chiefly the red gum.<sup>2</sup>

1831

April 17: Captain Collet Barker crosses 'the Onkaparinga River' when searching the gulf, for an outlet of Lake Alexandrina. He crossed the bar in his boat and recorded its name as Ponkeparringa Creek as given to him by the Natives. In the 1841 Arrowsmith Plan the river was spelt Unkaparinga; Messrs. Teichelman and Schumann spelt it Ingankiparri in their vocabulary. Dr. Wyatt, protector of Aborigines spelt it Ungkeperringga and gave its meaning as Mother River Plentiful. In a map made by Colonel Light it is marked Field River. The mouth was rediscovered in 1836, explored by Liecht W.G. Field and Mr. Paller; under Governor Gawler's policy of retaining native names of localities it was given its proper designation: Onkaparinga<sup>3</sup> thought to mean muddy waters.

1839

January 1: First Special Survey, known as the Mount Barker Special Survey, is claimed by William Hampton Dutton. Area surveyed in October, 1838. 'On November 5, 1838, a plan of the Survey was exhibited for public information in the Land Office. For the selection of their 4,000 acres Dutton and his partners were allowed until November 26, after which the remaining 11,000 acres were thrown open for public purchase at £1 per acre.'<sup>4</sup> The area of the special survey covered the future settlements of Hahndorf (1839), Balhannah (1840) and Grünthal (early 1840s) in what became the District Council of Onkaparinga in May/June, 1853<sup>5</sup> and Mount Barker (1840), Blakiston (1840) and Littlehampton (1849) in the Mount Barker District Council proclaimed in October, 1853.

January 24: Sources of the Onkaparinga Special Survey claimed by David McLaren for the South Australian Company, McLaren purchasing two surveys of 8,000 acres instead of the usual 4,000. The area was surveyed in June by E.W. Cross and F. Nixon, with a total of 16,250 acres being mapped.<sup>6</sup> On 18 July, 1839, McLaren paid £1,000 for an extra 1,000

acres in the Onkaparinga Surveys thus making 9,000 acres that the Company owned freehold and thus giving it a virtual monopoly over the best land in the district. The area of this special survey(s) encompassed the future townships and communities of Oakbank (1840), Lobethal (1842), Charleston (early-mid 1840s), Inverbrackie (mid 1840s), Lobethal environs - the subsidiary settlements of Schoenthal, Neudorf and Tabor Valley (mid-late 1840s), Woodside (mid-late 1840s), Springhead (late 1840s-mid 1850s), Forest Range and Lenswood. Also on January 24, Matthew Smillie, a lawyer from Scotland, was granted a special survey south of the Sources of the Onkaparinga 'and bounded on the western side by Dutton's 'Mt. Barker Special Survey'<sup>7</sup> Under an agreement with the South Australian Company, Smillie and the Company each took half the 5,000 acres claimed. On his share of the land Smillie laid out the township of Nairne (after his wife's maiden name) in late 1839 with a plan showing residential allotments being made public in January, 1840.<sup>8</sup> The Nairne Special Survey covered the area known as Hay Valley where John Dunn built the first flourmill in the Hills districts. A second windmill was constructed by F.R. Nixon on Windmill Hill near Mount Barker in 1842.

**January 25:** Contract drawn up between the three owners of the Mount Barker Special Survey (Dutton, Finnis and McFarlane) that allowed 150 acres of the survey to be transferred rent free for one year, plus provisions and livestock 'on credit', to the German emigrants that had arrived the previous year on the ship 'Zebra'. This was the site of Hahndorf, settled by some 50 plus families between March and May, 1839.<sup>9</sup>

**February 9:** William Beavis Randell, stock manager of the South Australian Company writes to David McLaren, Colonial Manager, from his residence known as Park Cottage:

'My dear Sir, - I am just returned from the Bush, having been absent eight days, - the greater portion of which, have been spent in examining the sources of the Angas (i.e. Onkaparinga), and forming the lines for its boundaries; it affords me much pleasure in being able to state, that this beautiful survey exceeds my expectations.

When I first recommended it, I was fully persuaded that it was a most desirable district for a Special Survey for the South Australian Company, but on more minute examination, I am sure, as far as my knowledge of the Colony extends, its equal cannot be found.

It comprehends three beautiful valleys; in each of these is a tributary of the Angas;...The valleys vary in width from 1/4 to 1 1/2 miles and are composed of some of the best land in the Colony, and I think I may say, as good as I ever saw.

When I first discovered this neighbourhood, it was covered with an abundance of beautiful kangaroo grass, high as my horse's belly, and as closely matted at the bottom as our best bottom-pasturage in England, and fitted to fatten the largest oxen I ever saw.

The fine country still retains its verdure and beauty, and is fitted to any kind of stock. The valleys are more partic-

ularly adapted to grazing cattle and dairy purposes; much arable, is interspersed amongst the undulating land, and the hills and sides will afford excellent sheep-runs, as good, I think, as can be desired.

There are many places beautifully undulating, and afford excellent sites for building, and are as picturesque as the most tasteful one could desire.

Some parts between the valleys are interspersed by forest land, thickly wooded with gum and stringy-bark wood, a great portion of which is of the best quality (Mr. R. Cock says, the timber alone is worth all the money the land and it together costs). Stone also, fitted for building purposes, is very abundant: such as slate, lime, sand and ironstone.

You have already seen a part of this valuable district...; but I am sure, when you come to ride through the length and breadth of it, it cannot fail to delight you, to see what a valuable estate is added to the Company's property: and I cannot help expressing the great satisfaction I feel, in being thus instrumental in putting into my employers' hands a vast property, that I am sure cannot fail to meet their highest approbation.<sup>10</sup>

**March:** Charles Dunn, one of the sons of a Devon tenant farmer, arrives in South Australia. A blacksmith by trade, he soon went into farming himself on a rented holding near Nairne, but in August 1845 he purchased section 5136 in the Onkaparinga Special Survey.

This brought him to the same area that his brother William, who reached South Australia in December, 1840, had decided to settle. William had acquired, in 1843, section 5129 near Mount Charles, named after Charles Newman who had been employed as a shepherd by the South Australian Company for some years. Newman was entrusted with supervising some of the South Australian Company's sheep in the Mount Charles area after the mapping of the Onkaparinga Special Survey was completed in the middle of 1839. Newman decided to remain in the district and on June 30, 1843, he bought section 5130, this being the very same day that William Dunn took up his section. Thus, Charles Newman and the Dunn brothers were the founders of the community known firstly as Mount Charles and then later 'Charlestown' (Charleston), after Charles Dunn subdivided section 5197 and 47 town lots in 1857.<sup>11</sup>

**June-December:** Early settlers start to arrive in the Onkaparinga district. One such family were the Brakenridges of Argyle, Scotland who arrived at Holdfast Bay in June, 1839. Originally crofters (small tenant farmers) they settled in the vicinity of Oakbank in late 1839, John Brakenridge and his son being employed by the South Australian Company as shepherds.<sup>12</sup> The South Australian Company used their extensive holdings in the Onkaparinga district to run their flocks of sheep until the summer of 1846-7<sup>13</sup> when, in line with their new policy, they started letting out the land for agricultural settlement.

**August 28:** James Turnbull Thomson of Dundee, Scotland arrives at Holdfast Bay, buys section 4208 in the Mount Barker Special Survey and takes up residence there in December, 1839.<sup>14</sup> On December 21, an advertisement appears in the *S.A. Register* announcing a 'new Township near Mount Barker called *Balhannah* that was being laid out with allotments available for sale.' By March 28, the *S.A. Register* was advertising the fact that 'a comfortable Inn (at Balhannah) will be opened in a few days, and houses are about to be erected by a number of purchasers who have chosen this place, ...'. This hotel was called the Balhannah, and was licensed from 1840-1862; it was the first public house in the Onkaparinga district.

#### 1840

More settlers arrive in the Onkaparinga district, including the Johnston family, J.R.G. Fowler from Somerset in England, Alexander Lorimer from Paisley-on-Glasgow, Scotland, and the Murdoch family, also from Paisley. The Johnston family purchased section 4018 which was to become the location of Oakbank. J.R.G. Fowler was to marry one of John Brakenridge's daughters in 1854, the family then living on their property of 'Kilonan' (named after their former home in Scotland) near Charleston. Alexander Lorimer became Chairman of the newly proclaimed District Council of Onkaparinga in 1853 and in the same year married Fowler's widow (Fowler had died in 1847). By this time Lorimer, in association with John Murdoch, was one of the largest landholders in the district; after his marriage he built a substantial residence near Woodside in 1856 called 'Elderslie'.<sup>15</sup>

The Murdochs took up a large area of land some miles south of Woodside in 1840 and named it 'Craigdarroch'; nearby 'Murdoch's Hill', being named after John Murdoch who died soon after settling in the area, leaving his widow, Margaret, to run the family estate.<sup>16</sup> Police Station built at Mount Barker. Consisting of three rooms, a kitchen and a cell block, this was to be the only present of 'law and order' in the Mount Barker and adjoining districts for many years.<sup>17</sup> Dissatisfaction with this arrangement eventually led to agitation for a Court House and Police Station to be established at Woodside. This was finally realized in 1859 (Court House) and 1860 (Police Station).

**August 20:** William Giles (shortly to become Colonial Manager of the South Australian Company in early 1841) writes to George Fife Angas in London:

I have just come to town from the Sources of the Onkaparinga, where I have been assisting to select 8000 Acres of Land (for the South Australian Company out of the Special Surveys). - This estate I conceive equal to our finest Vales in England; where I have been engaged occasionally during the last 25 years in Land Surveying. Not even in Devon, Somersetshire, Leicestershire, or Kent can I recollect ever seeing a District bearing such an immense crop of Grass; when the Sheep are first turned upon it, they are literally hidden by its height, and

viewing it at a distance, it has more than appearance of a Wheat Field at Harvest Time, than of Pasture. - Turning in every direction through this Property, there are to be seen, in the bottoms of the Valley, beautiful little Brooks of Water, on the banks of which, the Gum Tree grows to an extraordinary size: in the hollow trunk of one of these Giants of the Forest several Persons may recline together, and be accommodated with a Night's lodging. And surrounding and intersecting this splendid District, are ranges of Hills of Iron Stone, upon which the Stringy Bark is found in abundance: the most useful of our Woods for the purposes of fencing and buildings, which at a short distance, may be found also an ample supply of lime & free stone.<sup>18</sup>

November 28: *The S.A. Register* (p.4) reported from 'The Country' that: 'We...visited the townships of Mount Barker, Nairne, Balhannah and the German township. The latter is, through the patient industry of the German settlers, becoming a very respectable looking village. There are 54 families in it, who have each a good garden under cultivation, besides a small plot of wheat, and they have among them upwards of 100 milking cows. They have also about 120 acres of land under cultivation. These Germans by their industry, perseverance, and content, show an example which might be followed by many English settlers. The townships of Balhannah and Nairne are improving. Several mechanics (i.e. tradesmen) have lately gone from Adelaide to the latter place, and at the time we were there, some of them had got substantial stone houses erected, and others were in the course of erection. Did the mechanics in Adelaide know the comfortable and independent life these persons lead in the bush, we think many more would abandon the town and repair to the country. The expense of living in the interior is small when compared with the town, to say nothing of the difference in climate, which, to many, is not an unimportant consideration.'

In the Mount Barker district, there are this season more than 500 acres under crop...The quantity of stock in this district we cannot state exactly, but there must be somewhere about 20,000 sheep, and 1800 or 2000 head of cattle.'

#### 1841

January: The first census in South Australia was conducted. Also the recently established settlements of the country areas were surveyed in depth, and these results were reproduced in the British Parliamentary Papers relating to the Australian Colonies in 1843; in addition J.F. Bennett's *South Australian Almanac and General Directory for 1841* gives detailed information for the first time regarding the new country districts.

The Almanac under the table headed 'Mount Barker and Neighbourhood' gives the names and locality of residence of 53 persons, the acreage of the crops they grew and the number of livestock they had. There were, in addition, entries for the Village of Hahndorf and the Cattle Company at 'Hawdon Vale'.

Altogether the area which would have covered the Mount Barker, Onkaparinga, (J.B. Hack's) Three Brothers and (Matthew Smillie's) Nairne Special Surveys, had a total of 15,900 sheep and 2,727 cattle. In the same area there were only 259 acres of wheat, 48 acres of barley, 25 acres of oats and 99 acres of potatoes being cultivated, attesting to the importance of pastoralism as opposed to agriculture in the early 1840s.<sup>19</sup>

The papers relative to the Affairs of South Australia gave details of the 'Mount Barker District, including Mr. Smillie's, Mr. Hack's and the Angas (i.e. the Onkaparinga) Survey.' In the Onkaparinga district there were some dozen farmers recorded including Robert Cook, Alexander and William Cock, William Johnston (at Oakbank), John Brakenridge, John Kelly, William Richardson, James Thomson (at Balhannah), Thomas Henderson, William Owen, Joseph Sarnier, John Wrathall Bull, Mrs. Margaret Murdoch, John Disher and James Archer. The entry for Thomson at Balhannah indicated '...an inn and hotel, stock-yards, etc; four dwelling-houses' - the settlement at Balhannah had not proved to be a runaway success for Thomson.<sup>20</sup>

**January:** Work is begun on a road to Mount Barker by the colonial government as there was no road past Glen Osmond and most of the traffic to and from the growing Hills settlements was by foot or bullock waggon over the rough and steep tracks through the bush. However, 'The work was begun at a time of a deep financial depression and when, a few months later, the Government found it impossible to continue, the principal settlers in the Mount Barker district decided to go on with the work at their own expense, hoping to recoup themselves to some extent by levying tolls on those who used the highway. In July, 1841 the Great Eastern Road Act was passed, vesting the road in certain trustees and empowering them to levy tolls, but the proceeds from these sources were barely sufficient to meet the upkeep of the small portion of the road already built, and there was neglectable balance for pushing on with the work of construction. In 1844, therefore, the Government resumed control and completed the work in the following year.

From 1841 to 1847 tolls were levied at a bar placed across the road at Glen Osmond...Carts with agriculture produce for market and persons on their way to church were allowed to pass the bar without payment. The toll system was abolished on December 1, 1847.'

**March:** First land purchase by Germans in the area of Grünthal take place. C. Jaensch acquires section 3817, K.F. Boerke section 3816, and G. Schuman section 3818. The following year, F.W. Witter buys section 3849, J.F. Paech section 3860 and K.F. Boerke section 1922.<sup>21</sup>

Most of the early settlers of Grünthal came from either Hahndorf, (which had become overcrowded particularly after the arrival of the first German immigrant ship in nearly two years - the *Skjold*), or Glen Osmond, where conditions were also cramped and unsuitable.

May 27: Section 4014, subdivided as Gilleston in 1858 and located 'opposite' Thomson's Balhannah on section 4208, is sold to Osmond Gilles, who had been Colonial Treasurer until 1839.<sup>22</sup>

October: The Dutch ship Skjold arrives in South Australia with 218 German emigrants lead by Pastor Gotthard Fritzsche. Some 272 had originally left Hamburg in July, 1841, but there had been 54 deaths on the voyage due to undiagnosed fever that struck the passengers. Coming mainly from Posen and Silesia, these Germans were the 'tail end' of emigrants resulting from state 'persecution' of the Lutheran church in Prussia.<sup>23</sup>

They were to settle, along with later emigrants, the German community of Onkaparinga district that stretched from Springhead, near Mount Torrens, to Lobethal (and its 'subsidiy' settlement of Schoenthal, Neudorf an the Tabor Valley) and Woodside. These settlements being distinct from one other German 'presence' in the district, that of Hahndorf-Grünthal.

December 25: The S.A. Register (p.3) published an article entitled 'Transactions of the Statistical Society - Report on Roads and Bridges' and the following extract refers to the history and progress of the Great Eastern Road so far:

Although the importance of a road to the eastward, towards the Mount Barker and Strathalbyn districts, and the River Murray, was very easily seen, yet such was the difficulty of finding a good pass over the Mount Lofty ranges, that it was not till the close of 1840 a proper line could be fixed upon. Early in 1841 the first division through Glen Osmond, was begun, and here as this report makes its appearance, will, though not finished, be open to traffic. After leaving Adelaide, the road leads across the plains for three miles, when it enters Glen Osmond, through which it winds three and a quarter miles up, when it joins the old track, at an elevation of nearly one thousand feet. In this portion off the road the gradient is 17.25, but the inclination varies from 1 in 66 to 1 in 9.

To carry out this road, it became necessary to pass the Turnpike Act, and appoint a Trust. The Act also gives power to the Trustee to make the road of 'Three Brothers' and to the villages of Nairne, Balhannah, etc. In this division of the road one thousand lineal yards of retaining wall have been built, from three to fifteen feet high, and the bank cut in many places twelve and sixteen feet deep. Seven small bridges have been made, one of them twenty-three feet wide, with stone abutments fourteen feet high.

This portion of the road will cost between £3000 and £4000, and when the whole contemplated lines are finished - Mount Barker, the Meadows, the Angas, the Green Hills, the Valleys, the Sources of the Onkaparinga, and several other special surveys, will be thrown open, as also the Murray and the overland road from Port Phillip. About eight miles from Adelaide the road will enter the Stringbark Ranges, called the 'Tiers', from whence the town is supplied with its most useful timber, and will lead through them for eight or nine miles. The branch to

Balhannah, etc. has already been begun. It will cross Cox's Creek by a bridge of about 70 feet span.

#### 1842

April: Johann Friedrich Krummnow buys the 196 acres of section 5124 and 5125 in the Sources of the Onkaparinga Special Survey on behalf of some of the emigrants from *Skjold*. By an agreement, Krummnow (the only naturalized 'alien' and therefore able to buy land as a 'British' subject at £1 per acre) was to sell 110 acres comprising 36 allotments of 3 acres each, to the other 18 signatories to the agreement. These 18 men regarded as the 'founding fathers' of Lobethal.<sup>24</sup>

May: The 36 village blocks are divided by lot amongst the 18 'founding fathers' and the settlement is named Lobethal by Pastor Fritzsche.

Two flour mills are erected in the Mount Barker district; one was a windmill erected by F.R. Nixon on Windmill Hill near Mount Barker and the other was a watermill built by F.W. Wittwer at Cox's Creek near Grünthal (section 3849).

#### 1843

August: James Turnbull Thomson, the proprietor of the Balhannah Hotel (of which he was licensee from 1841-1848 and 1852-1855) first brews family beer with the help of W. Milne and W. Johnston at the Balhannah Brewery. The business was unsuccessful for in June, 1844, Mr. M. Thompson was forced to mortgage his 80 acre Section and later most of the balance of his property went to his creditors.<sup>25</sup>

Oakbank: It is generally believed that William Johnston and two of his sons, James and Andrew, founded the Oakbank brewery in 1843.

September: One of the South Australian newspapers described the progress of Hahndorf, and the new settlement of Grünthal (meaning Green Valley) 'A mile nearer Adelaide, a smaller village has been formed by the industrious Germans consisting of about ten families. They have erected a good water mill which is abundantly supplied from Cox's Creek during 6 or 7 months of the year...The villagers are still busy putting up barns and out-houses and meanwhile their little crops are coming on though somewhat late.'<sup>26</sup>

#### 1844

James Allen's South Australian Almanac and General Directory for 1844 gives information on the settlements at Hahndorf and Balhannah including acres of crops and numbers of livestock for individual settlers. Twenty-seven people were listed for the Balhannah area, including settlers over quite a large area; Allan McFarlane of 'Glen Sloy' near Mount Barker was listed for instance.

'William Johnston' of 'Oakbank' was doing well with 50 acres of wheat, 12 of barley and 4 of potatoes. He also has 80 cattle, 1 horse and 12 pigs. Robert Cook of Mount Annan had

the largest area under wheat with 153 acres, he also had 12 acres of barley, 1.5 of maize and 6.75 of potatoes, with 30 cattle, 4 horses and 3 pigs, and according to the Almanac 'Alex Cook' of 'Thornton' (presumably Robert Cook's brother) was running 1,200 sheep!

'Lobethal' is mentioned with a list of 26 settlers and the comment that, 'the returns from the settlers at Lobethal comprise 50 acres of wheat, 10 of barley, 1 of maize, 10 of potatoes, 17 of gardens, 40 cattle, 2 ponies, 32 pigs, 11 goats.'<sup>27</sup>

**September:** Immigration of German settlers resumes after a two-year lapse with the arrival of the George Washington carrying 181 passengers. Some of these people went on to settle the Schoenthal area near Lobethal on land owned by the South Australian Company.

#### 1845

Reedy Creek Copper Mine opened in the Hundred of Tungkillo. Bullocks carted ore to Port Adelaide via Mount Torrens and apparently through the locality that was known as 'Inverbreckie' or 'Inverbrechie' (later the spelling was standardized by usage of 'Inverbrackie') by the mid-1840s.

'A mile and half from Woodside is Inverbrackie, which is the older settlement and was in the late thirties of last century (incorrect - more like the early forties) a scattered settlement of Scotsmen. When the Reedy Creek mine ran through Inverbrackie, a settler named Payne turned his residence into a hotel. Soon a church was decided upon.'<sup>28</sup>

Two of the early residents in the Inverbrackie area were Dr. William Innes, a surgeon from northern Scotland, who is said to have named the area after his former home and Joseph Payne, who built one of the first houses in the district, converting it to an inn in early 1846, the inn being licensed in June of that year. Dr. Innes was granted section 5276 in October, 1844, and if he did indeed name Inverbrackie, then this would seem to confirm that the locality was not known until the mid-1840s.

**South Australian Company:** There are now three tenants on the S.A. Company's lands in the Onkaparinga district with four sections being leased. One 'tenant' comprised William and James Johnston on sections 5265 and 5266 (160 acres).<sup>29</sup>

**September:** Dedications of the 'Zum Weinberg Christi' Lutheran Church in Lobethal, this being the first substantial church built in the district. The only other church in existence was a small pug and thatch one at Hahndorf which had been dedicated by Pastor Kavel in 1840. It is interesting to note (see entry under 1847) that Hahndorf was not considered part of the northern Mount Barker District as the Onkaparinga district was known before declaration of the Hundred in October, 1846, and even for some time afterwards.

Also in 1845 the Lobethal College or seminary was constructed by the Lutheran congregation for Pastor Fritzsche's students.

1846

**June:** J. Payne's Inverbrackie Inn Licensed; it was to continue operation until early 1851.

**March:** The third census to be conducted in South Australia records that there was a total of 1,452 people (780 males and 673 females) living in the 'Sources of (the) Onkaparinga' district.<sup>30</sup> Of these the bulk belonged to either the Lutheran Church, or to the Church of England, listed, 204 people (virtually all male by virtue of the time) were classed as 'Land proprietors, merchants, bankers, and stockholders'. Given that there were only 482 males over the age of 14, this means that about 45 per cent of the adult male population of the district could be defined as having been 'capitalists' in 1846. Considering that only 6 people were defined as being 'Gardeners, farm servants, and persons employed in agriculture' and that the South Australian Company was running its sheep in the district until the summer of 1846-7 it seems that there was not much in the way of agricultural settlements and development in the sources of the Onkaparinga Special Survey until the late 1840s. It is also interesting to note that of all the 28 districts covered by the census, the Onkaparinga district had the highest number of these Land Proprietors, Merchants, Bankers and Stockholders'.

**July 10:** A meeting of (male) settlers was called at Payne's Inn (as the Inverbrackie Inn was locally known) to discuss the possibility of building a Scottish kirk or church for the Presbyterians of the district.

**August:** A major doctrinal split develops between Pastors Kavel and Fritzsche at the Bethany Lutheran synod.

**October:** Declaration of the Hundred of Onkaparinga in the South Australian Government Gazette.<sup>31</sup>

1847

**February:** An application in the form of a petition from settlers in the 'Northern Division of the Mount Barker District' for a Post Office at Inverbrackie is refused.

1849

**January 14:** The Caledonian Church at Inverbrackie is opened by the Reverend Robert Haining.

**May 29:** A letter signed by '...inhabitants of, and parties interested in the prosperity of the Northern Division of Mount Barker' is sent to the Post Master General to 'respectfully solicit your attention to the want of any Postal communication, with this part of the District, which although principally an agricultural neighbourhood is as densely populated as any in the Province.

Taking the Church lately erected near Inverbrackie as a Centre, the nearest Post Office (at Nairne) is at a distance of about six miles.' And that, '...the School room at the Church,

would be as central a situation as could be obtained for the Office; also that Mr. Orr the Schoolmaster would be a fit person to take charge of it...<sup>32</sup>

**June 23:** The proponents of the above letter are informed that the matter of the Post Office had been given to the Colonial Secretary as 'he (the Post Master General) understands an Office has been applied for through you, to be established at Balhannah.' They write back to say that, 'although an Office, established at Balhannah would be a convenience to the few individuals residing in that immediate neighbourhood, yet the Great Majority of the inhabitants would feel no benefit from it, as that Township lies completely on one border of the located parts of the District. We feel convinced no more central situation can be obtained than the one proposed at the Schoolroom, unless Payne's Public House was chosen, which would be against the wishes of many of the individuals who have signed the Memorial.'<sup>33</sup>

**July:** Johann Christian Schubert purchases section 5309 and 5306 in the Hundred of Onkaparinga thus pioneering the area that came to be known as Springhead.

**July 4:** The Post Master General agrees that Inverbrackie is a better position for a Post Office than Balhannah and so the petitioners were successful in having their request granted.<sup>34</sup>

**July 21:** Dr. William Innes dies at 44 years of age and is buried in the Inverbrackie Cemetery; this was probably the first internment in the cemetery.

**September 7:** The *South Australian* newspaper (p.1) announced that a ploughing match was to be held 'adjacent to Inverbrackie' on Section 5261 occupied by Robert Wilkie on Wednesday September 12, dinner to be provided by Mr. Payne's Inverbrackie Inn. In the September 21 issue of the paper (p.4) there was a report on the ploughing match which said that 'The day, as usual, teemed with a 'heavy wet' but so keen is the spirit of competitions of this sort among agriculturalists, that a very numerous and respectable company was on the ground.' It also stated that this was the first time that a ploughing match had taken place in the Northern Districts of Mount Barker.

Silver-lead is discovered on the outskirts of Lobethal, and the Wheal Emma mine is opened and worked until mid-1851.

Copper is located on Section 4048 near Balhannah and Cornish miners work the area in 1850 and 1851.

Lutheran day school built in Lobethal and dedicated by Pastor Fritzsche in 1851.

Hahndorf: The two *South Australian* almanacs of this year note the existence of a Post Office in the village.

### 1850

**January:** Two mining companies peg out areas which look like they could be gold-producing; they were The South Australian

Gold Company and The Onkaparinga Gold Company, both of which failed to produce enough payable gold and folded in 1851.

Golden Cross Hotel, Balhannah, licensed to William Anderson, Anderson having purchased 4 allotments in the township of Balhannah in February 1849 including a brick cottage of four rooms.

Woodside Inn, Woodside, was also licensed in this year to one Francis Duffield. The Johnston family owned this hotel in the 1850s, selling it in 1856 to a Hans Heinrich Ferk, restaurateur of Adelaide, but repurchased it in 1874-75.

April 6: James (Jimmy) Johnston is granted section 5030, near Inverbrackie, for the price of £103, the land had been passed over by the South Australian Land Company as unsuitable on their original Special Survey of January 1839. Mr. Johnston subdivided the section for the township of Woodside in 1856, although the name Woodside (after a village in Scotland) was in use before that date.

April 10: *The South Australian Register*, p.3 records that 'The steam-mill of Messrs. Parr, near Balhannah, will be in operation in a few days. The works are substantial and the machinery appears to be in excellent order.' This may have been the flour mill that was constructed alongside the main road from Adelaide to Mount Torrens via Balhannah and Woodside and which was in operation from 1850 to the early 1860s. The only other recorded flour mills in the Onkaparinga District were located at Hahndorf, Cox's Creek near Grünthal (this one was outside Council boundaries), Lobethal and Charleston.

South Australian Company: There are now 74 'tenants' (a tenant here can mean one or several individuals as there were often two or even three people farming on the one section or sections) on the Company's land. According to Company records they were leasing 8,312 acres of land to these tenants, 2,787 acres of which were cultivated for wheat in 1850. By 1855 they were leasing 8,819.5 acres of land, of which 3,156 acres were devoted to wheat. In 1860, when the records end (or rather are not available) some 9,013.5 acres were being leased and 3,957 acres were under wheat.<sup>35</sup> From Parliamentary Paper No. 87 of 1861, *Agricultural and Livestock Statistics* to March 31, 1861, it appears that there were 16,966 acres of leasehold land in the Onkaparinga district (and 22,325 acres freehold) with only 12,558.75 acres being cultivated and 8,681 acres of that being under wheat. Thus, the S.A. Company's tenant farmers were responsible for producing almost half the wheat crop in the district in 1860 (3,957 of 8,681 acres), and, with 7,922.5 acres under cultivation (9,013.5 minus 1,091 acres fallow), they were also responsible for most of the 12,558.75 acres under cultivation in the Onkaparinga District Council. These statistics emphasize the importance of the Company's land in the agricultural development of the area in the 1850s, and it may be that many people who could not afford to purchase freehold land were enabled to undertake farming by leasing from the Company. Others boosted their freehold properties by renting additional sections of land.

1851

January 1: The census records that the district of Onkaparinga had a population of 2,731 people (1,509 males and 1,222 females) living in 535 houses of which 365 were made out of wood, 85 of stone or brick, and 85 of other materials. Of the 35 occupational categories given, the largest was that of 'Farmers' of which there were 291, followed by 'Sawyers and Splitters' (timber-cutters) of which there were 92, attesting to the importance of this occupation in the district in the early years of settlement. Most people (2,130) were not classed in any of the 35 occupations and this would account for most of the women and children.<sup>36</sup>

March: On his journey through South Australia an 'Old Colonist' passed through Woodside, Inverbrackie and Hahndorf and wrote:

We now came into the long, straggling, but interesting village of Woodside, called so, we suppose, from its forming a continuous line at the foot of the woody ranges, which runs, or perhaps at present stands, the river. There is a good inn at this place, called Woodside Inn, kept by Anderson, where the traveller will meet every civility and attention from the landlady. The village itself is peopled almost entirely by Germans, in the usual accompaniments of costume and hardworked women...Every farm at Woodside seemed to have produced a favourable crop, in process of thrashing and winnowing. There is a small church here (St. Mark's Anglican) and there are also several stores; and the population must be considerable, as we counted sixty or seventy tenements along the line and otherwise, scattered about.

On leaving Woodside, we turned up a road on our left beyond the inn, to the little village of Inverbrackie. To the right, shortly afterwards, we came to a small Scotch Church. Inverbrackie has also a public house, and several settlers are located in several directions all around. Everywhere about us were further results of cultivation, till we arrived at the top of a steep hill overlooking the valley and village of Blakiston...

Four miles from hence (Mount Barker township), along a very middling road, is Hahndorf, a village essentially German in name and nature. On the way we observed a great many thriving potato crops, and cornfields that seemed to have yielded good harvests. The soil here, like that of Mount Barker, is well adapted for the cultivation of the potato...' '...Hahndorf is approached from a woody, or rather an enclosed region... On each side of the road were cottages of the Germans, with their peculiar thatches, which looked ponderous and substantial... Another strip of wood is passed, the village appears, with its long street straggling on the highway. Hahndorf contains more than 100 houses, as, exclusive of the main street, there are others parallel to it, and several traverse. The houses are vary various, of stone, wood, pisé and a combination of all, but there are some neat though rather dull-looking

structures, with upper floors. The inhabitants are nearly 500, chiefly Germans - industrious, good-humoured, obliging, and, in many cases, intelligent. ...in the village street are stores and a Post Office, and the usual trades, as well as a good inn, called the German Arms kept by Ide. ...not far from this inn is a small steam flour mill'.<sup>37</sup>

**March:** The licence for the Inverbrackie Inn expires for the last time and is not renewed.

First recorded Post Office in Balhannah, one William Whitfield being the Postmaster.

Henry Fenwick opens a private school in Balhannah and he was to remain there until a public school was opened in 1858.<sup>38</sup>

A Wesleyan Methodist Church is erected in Woodside, and an Anglican Church, St. Marks, was also built in Woodside in late 1851.

**December 23:** Ferdinand Welke of Grünthal receives a licence to sell Wine and Beer at the Fourth Hill hotel, (although the locality seems to have been recorded as Balhannah instead of Grünthal). In 1853 Welke sold his hotel to one John Stanley who obtained a licence for the Ford Inn, so named after the place where the Onkaparinga crossed the main road to Balhannah, and when the ford was replaced by a new bridge in 1857 as part of the new road from Bridgewater to Mount Torrens via Balhannah, it was called the Stanley Bridge. The same year, John Stanley changed the name of his hotel from the Ford Inn to the Stanley Bridge by which name it is still known. As an Englishman in a still almost completely German township, Stanley was apparently not very popular and he gave up the licence to his hotel in 1851, the next licensee being, not surprisingly, a German.<sup>39</sup>

### 1852

Inhabitants of Inverbrackie protest against the withdrawal of their postal service and are successful in getting it reinstated.<sup>40</sup>

James Turnbull Thomson reopens the Balhannah Hotel; the *Adelaide Morning Chronicle* of 14 June carried the following advertisement:

Balhannah Inn: Having been re-opened by the Proprietor, he invites his old friends and the public to 'trie' his liquors, etc. He has stopped the ordinary country extortion on Beers, and hopes by good usage and honest charges, to satisfy both man and beast. N.B. - a rich well-watered paddock for Cattle. Balhannah, May, 1852.

Thomson only acted as licensee of the inn until 1855 and in 1860 he left Balhannah altogether to live at Milang.

Dr. H.C.F. (Hermann Charles Frederick) Esau, a graduate from the University of Gottingen in Germany, settles at Woodside late in 1852.<sup>41</sup> Dr. Esau was the resident medical practitioner at Woodside, and therefore to the Onkaparinga district as a whole, from 1852-1898. He was also returning

officer for the electoral district of Onkaparinga and Registrar of Births, Deaths and Marriages.

**Caledonian Church, Inverbrackie:** The church finally gains a resident minister with the appointment of the Reverend John MacBean, MA, PhD, from Scotland. After the closure of the Inverbrackie Hotel (Paynes Inn) in 1851, it was used as a manse for the new minister. The Reverend MacBean stayed at Inverbrackie for two and a half years until he was appointed to a post in Colombo. He was succeeded by the Reverend William Ross, MA, PhD, also a graduate of Aberdeen University in 1856. Ross resigned in 1861 to go to the eastern colonies and was replaced by MacBean, who returned from Ceylon in that year, staying in the Woodside area until his retirement in March, 1855.

### 1853

Adelaide Land and Gold Company formed in Paris for the purpose of purchasing gold and other ores and to acquire mineral and agricultural lands in South Australia. The consortium was made up of French bankers and two London merchants, Richard and John Hallett, John being a well-known grazier and investor in Adelaide. The company purchased over 2,000 acres in 1852-53 in the Forest Range area, and after failing to locate any mineral deposits, started to lease their land from December, 1853. Finally in May, 1874, the property comprising some 2,170 acres, was sold to John Rounsevell, pastoralist of Mount Crawford, for £1,890.<sup>42</sup>

**May 26:** The Onkaparinga District Council is officially proclaimed being the second district council to be proclaimed in the colony of South Australia after Mitcham (gazetted 12 May, 1853). The formation of the Council was announced in the *S.A. Government Gazette* of 2 June, 1853, along with notices for the new district councils of East Torrens and Hindmarsh. The district council of Mount Barker was not, however, gazetted until 22 October, 1853.

The first council consisted of 5 members - Messrs. Alexander Lorimer (Chairman), F.W. Kleinschmidt, William Kelly, James Johnston, and Johann D. Weinert. The first meeting of the Council was held on July 14 at Woodside.

October 3, *The S.A. Register* reports that 'On Thursday the first ploughing match of this young but spirited and rising district took place...'. Ploughing matches were popular in the 1850s and 'were held in every district' with both men and boys competing in the various matches. The interest in ploughing matches reflected that shown in agriculture as a whole, together with the holding of agricultural shows and the formation of farmers' societies (Mount Barker in 1846 and Gumeracha in 1853). After the 1850s there seemed to be a decline in activities such as these until branches of the Department of Agriculture's 'Agricultural Bureau' began to be established in the late 1880s. The new approach was directed towards 'scientific farming' and 'agricultural education'

rather than the more 'romantic' notions of the past and reflected the massive changes that had taken place in between the mid and late nineteenth centuries.

**November:** At two successive council meetings memorials were received from the residents of Woodside and Balhannah 'praying for a Public Pound to be erected in, or near to the Township!'. The Council complied with the request and appointed Thomas Hutchens the Pound-keeper of Woodside Pound.<sup>43</sup>

**December 9:** The Council instructs the clerk to 'again, write to the Central Road Board, with reference to the bad state of the Main Line; from Cox's Creek to Mount Torrens; particularly in the neighbourhood of Mount Charles and Putlands Bog...'.

First religious schism within Lobethal; during 1853 and incident involving some of Pastor Fritzsche's Lutheran congregation indulging in dancing at a wedding led eventually to their 'excommunication' and the setting up of another congregation, which built its own church in Lobethal in 1858. This was the first of several divisions which were to take place within the Lutheran community at Lobethal, there being at one stage four separate churches (completed 1845, 1858, 1863, 1876) existent in the town.<sup>44</sup>

Death of William Johnston at 64 years of age (he was born in 1789).

#### 1854

**January 23:** John Baker MLC, sends a second letter to the Colonial Secretary regarding the establishment of a mail service between Lobethal and Adelaide. He had sent his first letter in November, 1853, stating that the inhabitants of the town wanted a direct mail route to Adelaide, but he was notified in early December that 'it does not appear that there are a sufficient number of letter recipients at Lobethal to warrant the establishment of a separate Mail to the village'. Accompanying his second letter was a petition and a modified request for a branch mail from Woodside to Lobethal, instead of a direct mail from Adelaide. This request was accepted and in late February, 1854, Mr. Baier received a letter saying that a Post Office would be opened in a few days at Lobethal.<sup>45</sup>

**February 16:** At a meeting of the council, the first annual rate of assessment of one shilling in the pound was adopted by 132 votes. 86 voters (243 votes) were in favour of the shilling rate and 53 voters (111 votes) were for a sixpenny rate. At the following council meeting on February 24, it was noted that, 'there are several Squatters residing in the Tiers (Forest Range locality) without a Licence...'.

**March 13:** An early attempt was made, unsuccessfully 'by Memorial, published in the Government Gazette, of last Thursday, by 40 of the Inhabitants of the village of Hahndorf and the adjoining neighbourhood to, if possible, accomplish a separation from this District.'

**April 7:** At the council meeting, the 'landlord of the Woodside Inn Mr. R. Wilkie, presented to the council, a note, respecting his charge for the use of a room as Council Office, viz 3/- in Winter and 2/6 in Summer - each meeting - agreed to!.' It seems that this situation remained in force for some time, with the Woodside Mechanics' Institute also occupying a room (the same one?) in the Inn (see *The Register*, December 11, 1856).

Gold found at Stony Creek in the Forest Range area by a party of prospectors. These men worked their claims in secret for several months until May, 1855, when the discovery became known and a rush started. This rush reached its peak in June, 1855, and after that, quickly petered out.

**May 12:** At a meeting of the Onkaparinga District Council, 'Applications were received from Mr. James Thompson of Balhannah for the storekeepers licence and also for a licensed Victualler's licence to be considered on Monday, 12th June'. On that date both licences were refused by the Council.

**May 30:** From the 'Return of the Flour Mills in the Province of South Australia' - on this date there were 3 completed steam flour mills in the Onkaparinga District (one each at Hahndorf, Lobethal and Woodside) and 3 steam flour mills under construction (at Hahndorf, Lobethal and Mount Charles).<sup>46</sup>

**July 17:** At this meeting it was 'Resolved that this Council consider that the establishment of a police station and a court of limited jurisdiction at Woodside in the Hundred of Onkaparinga would be conducive to the public interests and that the clerk be instructed to forward a copy of this resolution to the Colonial Secretary for the consideration of His Excellency the Lieutenant Governor'. This followed the submission to the government of a large petition (for the time), dated 29th October, 1851, containing some 300 plus signatures of settlers in the Hundreds of Onkaparinga and Tungkillo asking for the establishment of a local court and police station. This 1851 petition was signed by settlers in the Hundreds of Onkaparinga and Tungkillo who considered; 'That the abovenamed Districts in point of importance stand second to none in the Province, and have now become thickly populated amounting to upwards of 4,000 souls; - located upon at least 60,000 acres of purchased land: - And that your memorialists are subject to great inconvenience, annoyance, and expense, for want of police protection, and a Court for the recovery of debts.'<sup>47</sup> Although the request was eventually acceded to, it was not until 1859 that the courthouse was built at a cost of £750.

**July 21:** Council Meeting - Council congratulates 'the inhabitants of the district on the entire absence so far at the council are aware of the Scotch Thistle from the district...' and also 'The council feeling the importance of education Resolve, that a public meeting of the ratepayers be called... to consider the propriety of laying a rate for the erection of

schoolhouses in the several localities of the District'. At the following meeting on August 4, the council noted that it had received a letter from 'Mefs. Bartley, B. & Stow in which they are of the opinion that it would not be competent for this Council to pafs (sic) more than one rate on each assessment, and that no rate could be levied for any one specific purpose. Consequently no public meeting as proposed... will be held'.

### 1855

**March 12:** Council approves the following publicans' licences: Frederick Stackelroth, Lobethal Inn, Lobethal; John Stanley, Ford Inn, Greenthal (i.e. Grünthal); Robert Wilkie, Woodside Inn, Woodside; James Owen, Australian Arms, Hahndorf; Edward Morris, Golden Crofs, Balhannah; 'James Thompson, Storekeeper of Balhannah' again applied for both a general and storekeepers' licence and was once more refused the publican's licence though it seems he was granted a storekeeper's permit.

**May 29:** Selection 4013, subdivided as Blyth-Town in 1857, is sold to James Blyth, farmer, of Balhannah.

**June 11:** A publican's licence is granted by the Council to William Gosling who 'applied for a general licence for a House near Inverbrackie to be called 'The Wheat Sheaf Inn''. The Wheat Sheaf Inn operated until early 1864, and the locality it was situated in was often referred to as 'Manxtown'.

**July 13:** Council minutes record that the School Committee of Mount Charles had deposited some money (figure not indicated) with the council towards the erection of the school.

**September 17:** At this council meeting a Walter Jacka applied for and was granted a publican's licence for the 'Balhannah Inn' after producing 'respectable testimonials' and 'a police report considering that better accommodation was required in that quarter'.

**November 9:** The Council received a deputation of ratepayers from Hahndorf protesting against the spending of any of the 'district funds' on the building of a district council office at Woodside or 'any other place within the district'. This was because 'they intended to apply to the government for a separation from this (i.e., the Onkaparinga) district' although they 'would join in requesting the Government to erect a Court house at Woodside'. The memorial had been signed by 37 persons, however, 'The Council could not see what the memorialists generally had to gain by desiring a Separation'.

**November 12:** Alfred Swaine, employed as a 'clerk' by the South Australian Company writes to the manager that, 'the rising little township of Woodside...a handsome rental may be obtained at the expiration of the present Leases by leasing the Frontages in small Blocks, if the Co. would not feel disposed to sell them. The beautiful position of this Township in the middle of a large agricultural District will have a great effect on the Value of the Co's Lands in this neighbourhood'.<sup>48</sup>

Greenhill Road 'In 1855, a petition signed by 67 residents and 'proprietors' in the district of Onkaparinga, was presented to the Legislative Council asking for a road to be constructed to connect Balhannah with Adelaide via the Greenhill Road. It was pointed out that such a road would be several miles shorter than the proposed road via Glen Osmond...The Greenhill Road was ultimately constructed in the late 1860s, thus giving Balhannah two good roads to Adelaide'.<sup>49</sup>

Charleston: The government grants a site for a school on part of section 4247. Also in 1855 a post office is opened in the 'village' after the settlers had petitioned the authorities<sup>50</sup> and in the *S.A. Register*, 1855, (P.3) Charleston appears as a stop on the Eastern Mail Route. The route was shown as going via Crafers, Hahndorf, Balhannah, Inverbrackie, Lobethal, Charleston and Mount Torrens, after which it connected up with the mail from Mount Barker. A report in *The Register* five years later, on January 17, 1860 said that 'We have here nominally, although not really, the advantages of a daily mail communication with the metropolis...Each day at 3.00 p.m. the mails for Balhannah, Woodside, Mount Torrens, etc., are forwarded per Mount Barker conveyance to Hahndorf, from whence they are brought on at once'. In 1857 a post office was established in Woodside and in 1863 additional offices were opened in Grünthal and Oakbank, although the one at Grünthal seems to have closed and reopened several times after this date.<sup>51</sup>

#### 1856

Lobethal Public School established. This school had been set up in response to request for financial assistance from the 'Committee for the English School at Lobethal' which had written to the Central Board of Education in November, 1855. £130 was granted.

Springhead Lutheran Day School established on land donated by J.C. Schubert. Also this year the Lutherans of this area organized themselves into a formal congregation that was ministered to by Pastor Fritzsche of Lobethal, with services being held in the schoolroom.

March 10: At this council meeting, publicans' licences for 1856/57 were granted including one to John Phillips for the Charles Town Hotel, Charlestown, and one to Leopold Flich for the Rising Sun at Lobethal. Phillips appears to have been first granted a licence for the Charles Town Hotel in late 1855 for a notice appears to this effect in the *S.A. Government Gazette* of December 27, 1855 (p.939). It is interesting to note that the use of 'Charles Town' appears as early as 1855 although Charles Dunn did not deposit his subdivision of Section 5197 at the General Registry Office until 1857.

May 30: Joseph Remfry applied for a licence to keep a public house at Woodside to be known as the Bedford Hotel. At the meeting of 9 June, the police report was received: it stated

that the premises were in an unfinished state and so the licence was refused, 'but with leave to apply next quarter'.

**July 16:** *The Register* notes the existence of a saw mill near Grünthal.

**July 28:** A general meeting of ratepayers was held at the Woodside Inn and the then Chairman of the District Council of Onkaparinga, Francis Duffield, noted that he had received a letter from the Colonial Secretary stating that, 'the sum of £350, in aid of the erection of a building at Woodside, to serve as a Courthouse and district council chamber was available when required'. However, at the meeting the following resolution was unanimously adopted - 'That this meeting respectfully request that the District Council will not expend any portion of the district rates in the erection of an office in connection with a Courthouse but that the arrangement for office accommodation at present in force be continued'.

**August 22:** At the council meeting it was reported that Mr. Murdoch, Treasurer of the Inverbrackie School Committee has paid the Chairman of the council the sum of £130 towards the building of a new school. At the same meeting, 'The committee for the erection of a School at Woodside deposited with the Council for transmission, (sic) to the Educational Board a Plan, Specification & Estimate with a declaration...stating that the sum of £200 had been subscribed...'. At the September 5 meeting, the Secretary of the Woodside School Committee said that in a letter from the Central Board of Education reference had been made to another application from the district which had not been submitted to the Council - this was for the Inverbrackie School.

**September 8:** A plan of the subdivision of Section 5030 into 148 allotments and entitled 'Township of Woodside' is made by James and William Johnston who signed the original plan (GRO 84/1857) on this date in 1856.

Also on September 8, Joseph Remfry was again refused a licence for the Bedford Hotel, but Theodore Holzberger was granted one for the Alma Hotel in Lobethal.

**September 19:** At the request of the Central Board of Education, the Council gave its opinion as to whether Woodside or Inverbrackie were the best site for a school. They decided on Woodside, 'as the more eligible, being most populous'.

Also on this date, Alfred Swaine wrote to the S.A. Company Manager:

I have in one of my former reports directed your particular attention to the value of Section 5028, 5031 and 5022, adjoining the Township of Woodside in the Hundred of Onkaparinga (Section 5030) & I bring this matter again before you in order to see if no arrangements can be made to sell some portions of these sections in allotments before the expiration of the present Leases. You are fully aware of the importance of this little Township of

Woodside for the surrounding District and the only drawback to its further improvement is that the frontage of the Section opposite are not open for sale. The inhabitants of the Township not having confidence to build good houses in the rear of the present occupied frontages, and they as well as the settlers in the neighbourhood are therefore anxious to see a prospect of buying a portion of the frontages of the above Sections. I was literally afailed (sic) with questions about this matter when I last visited the neighbourhood and feel it my duty to make mention of it...<sup>52</sup>

This agitation on the part of Swaine led to the South Australian Company subdividing the Township of West Woodside in 1858. Records indicate that there were 46 allotments with the first sales taking place on January 11, 1859 although Swaine commented in a letter of June 15, 1858 that 'Several brick cottages have been erected in the Township of West Woodside, but as yet I have not heard of any substantial buildings being in course of erection...',<sup>53</sup> and an auction had taken place three months earlier on March 12.

**October 3:** The council resolved to call for tenders for a bridge near Grünthal. This may have been for the Stanley Bridge which was built in 1857 after a tender of £3,500 was accepted by the Central Road Board in December, 1856. The building of the bridge was part of the 'upgrading' and metalling of the main road from Adelaide to Mount Torrens via Balhannah.

**October 24:** The council notes the receipt of a letter from the Central Board of Education stating that £200 had been voted towards the Woodside School.

**December 8:** Joseph Remfry again applies for a licence for the Bedford Hotel, and is refused once more - (he was however to be successful at the March 16 meeting of the council). James Thomson makes one last effort to obtain a licence for the Balhannah Inn but is refused yet again.

### 1857

**Hahndorf Churches:** After several dissensions within the Lutheran community due to the influx of new settlers and the exodus of older ones, three churches were built in Hahndorf in the space of two years. The first was known as St. John's and was dedicated on December 25, 1857. This was followed by St. Paul's dedicated by Pastor Kavel in July, 1858, and the third was opened by Pastor Strempel, one of Pastor Fritzsche's graduates from the Lobethal Seminary in 1855, in July 1859. This was known as St. Michael's Church.<sup>54</sup>

Hahndorf Academy was started in this year by T.W. Boehm to provide more advanced education than was available elsewhere in the Hills districts, and 'gained an enviable reputation throughout the rest of the century', providing a sound education to both English and German students'.<sup>55</sup> Boehm had

originally been appointed teacher to the Lutheran Day School in Hahndorf in 1854 but had accepted government aid to branch out on his own.

**January 16:** The council received a deputation from the Committee for building a school at Balhannah who 'presented a Plan, Specification and declaration of trust'.

**January 27:** Francis Duffield, the Chairman of the District Council refers the above application for the erection of a school at Balhannah on Section 4022 to the Central Board of Education.

**March 16:** A Jonathon Smith is granted a licence for the 'Balhannah Inn'. Joseph Remfry is finally successful in obtaining his licence for the Bedford Hotel.

**March 27:** The council noted that the district had been divided into wards and that this had been proclaimed in the Government Gazette of March 9. At the same meeting it was stated that £200 had been expended on the Woodside School.

**July 31:** The Trustees of the Woodside School told the council that £200 had been spent on the building from subscriptions received and the Surveyor stated that the building was completed.

**September 14:** Council received an application from a Thomas Serle for a publican's licence for a house to be called the 'Splitters Inn' situated on Section 64 in the New Forest (as Forest Range was then called). The licence was granted at the meeting of September 25.

**October 9:** 'Mefs. (James) Johnston and Edwards waited on the Council as a deputation from a school committee near Balhannah and presented a plan and specification for a school room proposed to be erected on Section 4022 and requested the council to forward the same to the educational board estimated cost £216.' In addition a memorial signed by 'Fifty Householders' and a subscription list amounting to £83/13/- was presented to the Council supporting 'the school already referred to for the purpose of erecting a schoolhouse suitable to the requirement of that part of the district.' At the November 27 meeting, it was elaborated that these people 'residing on the opposite side of the river' had wanted 'a removal of the site somewhat nearer to their portion of the district' (Section 4014).

**November 16:** An advertisement appears in *The S.A. Register* (p.1) concerning the Balhannah Inn -

'Joseph Cauntely' begs to inform his numerous friends and customers that since his occupation of the above Inn, he has completely renovated the interior of the house, and he can now accommodate Travellers and Families visiting the district on a scale equal to any in Adelaide.

Travellers on the road can now make sure of a good and clean bed; their horses well fed, and carefully attended to. He has also procured a good and well-watered Paddock for teamsters. November 4, 1857.

**November 27:** Most of this council meeting was devoted to a discussion of the site of the proposed school at Balhannah and the problems it had caused. The council: 'finding a numerous party opposed to the site as originally proposed (Section 4022), they have simply requested the Board to suspend its decision until both cases are fully before them...'

**December 23:** 'Since the last meeting the Council have visited and inspected the district schools situated at Hahndorf, Balhannah, Inverbrackie, Woodside, Charleston and Lobethal...in each of these they found a considerable amount of proficiency in the elementary branches of education, including reading, writing, spelling, the more simple study of arithmetic, together with the elements of English Grammar and Geography...It is extremely gratifying to find that at the two English schools established amid the German population of Hahndorf and Lobethal the inhabitants appear anxious to avail themselves of the advantages thus placed within their reach, the School at each place is well attended, and the pupils have in the short time in which the schools have been in operation (Hahndorf 1855, Lobethal 1856) made considerable progress in English Education...'. The council also noted that 'The School rooms at Balhannah, Hahndorf and Inverbrackie are quite insufficient for the purposes to which they are devoted, being small and excessively crowded...the one at Inverbrackie is excessively bad, altogether unfit for the purpose yet the number of children is great...Efforts are however either being made or about to commence for the erection of suitable buildings at each of these places, the buildings at the other places are highly satisfactory'.

#### 1858

**January:** The Council 'Resolved that a communication be addressed to the Central Board of Education, requesting that an immediate enquiry be instituted into the conduct of a licensed teacher at Balhannah, as the council has prepared to substantiate very grave charges'. The council also found that none of them had been submitted to them regarding the Balhannah School were satisfactory and were of the opinion that 'the site granted by Mr. Osmond Gilles on Section 4014 fronting the main line of road and opposite the church is decidedly the most suitable for the locality'. At the January 15 meeting a letter was received from the Central Board of Education approving the council's decision on the site for the Balhannah School.

**February 12:** A 'Plan, Specifications and Estimate for a school proposed to built on Section 4014 at Balhannah' was received by the Council plus 'a guarantee for amount of Subscription for £200'. There was also a letter from the school committee stating 'that their efforts to effect a union

with the contending parties had failed...'. At the meeting of February 19, it was reported that the Central Board of Education had approved the plan for the Balhannah School.

**February 26:** 'The council congratulates the ratepayers on the opening during the year of the 'Stanley Bridge' and approaches, on the main line by the Central Road Board, this has been a decided improvement to the district and a great boon to the Farmers...'. 'The erection of district schools has proved a subject of considerable annoyance to the Council chiefly from the difficulty of pleasing all parties as to choice of site.'

**March 12:** Council receives letter saying that £200 had been voted towards the school at Balhannah. Mr. Alexander Lorimer, Chairman of the council, offers a site for the council office provided that a building was erected within 12 months. The council accepted his offer. Also on March 12, an auction was held by Wickstead, Botting, Townsend & Company at West Woodside where the 46 allotments of the new sub-division (GRO plan 246 of 1858) were available for purchase.<sup>56</sup>

**March 26:** Letter received from the Chief Secretary's Office, 'acceding to this Council's request to erect a Police Station at Woodside'.

**April 28:** Carl Anton Wuttke, formerly of Grünthal and the Barossa Valley, buys 'Cumberland Farm' near Woodside from a widow named Margaret Kelly. The farm consisted of two sections (5009 and 5091) 187 acres of 'excellent agricultural and pastoral land' and a homestead which Wuttke purchased for £1,500.<sup>57</sup> The property was established in the early 1840s (it appeared in the census returns for 1841) on Section 5091, and by 1846 Margaret Kelly was leasing three sections, 240 acres, from the South Australian Company in addition to her own land.<sup>58</sup> Cumberland Farm was typical of a number of properties set up in the 1840s that were to command high prices in the 1850s as available land for renting (usually from the S.A. Company) or sale started to run out.

By the 1850s even leases on S.A. Company land were commanding outrageous prices as Alfred Swaine commented in a letter written on November 12, 1855: 'Mr. James Kelly, Tenant of Section 5248, Onkaparinga, is asking the enormous amount of £600 for the Interest of his Lease, a small Stone Cottage and Fence being all the improvements on the land, and I have no doubt he will get very little short of it. - Similar Sales on this scale have lately taken place, but these will suffice to show you the value of the Company's property in this district, the Improvements on the Land being generally not more than a Fence and a Hut - At an average the lands in these District (improved and unimproved) may be considered worth 10/- an acre an annum, the rents varying from 3/- to 15/10 and acre'.<sup>59</sup>

**May 7:** The Council received a plan of Gilleston from Mr. R.B. Colley on behalf of Osmond Gilles who had Section 4014 subdivided into some 51 township allotments in 1858. A map signed by Osmond Gilles and C.B. Young dated 24 August, 1858 showed the subdivision of Gilleston the 'other side' of the Adelaide-Mount Torrens road from Balhannah. The section was surveyed by C.B. Young and J.W. Bull acted as agent at the sale.

**May 28:** *The S.A. Register* (p.3) noted that, 'In the township of Oakbank the erection of a pretty schoolhouse and several well-built brick cottages has stimulated the owners of property at Balhannah and Gilleston as a schoolhouse and other buildings are to be set about without delay'. The newspaper also commented on the new 'road through from town, 20 miles of which are unequalled in the colony'.

**June 28:** *The S.A. Register* (p.3) reported the opening of the Oakbank School and Mechanics' Institute on June 21: '...one of the prettiest buildings in the colony, erected by the voluntary subscription of the inhabitants on land kindly given by Mr. Thomas Edwards...The general...plan consists of boys' school,...girls' school,...with master's residence etc. The portion completed is the boys' school...'. The teacher was William Whitfield.

**October 22:** The Council received an application for a school at Inverbrackie on a site granted by the government. A 'Plan Specification and Estimate with a Guarantee for £150 was laid before the council' for transmission to the Central Board of Education. At the November 5 meeting a letter was received from the Board disapproving of the site for the school, and 'A discussion ensued in which Mr. Lorimer strongly censured the conduct of the chairman in sending to the Board his private opinion adverse to the proposed site, which it appeared the clerk had enclosed with the council documents. Mr. Lorimer then left the room stating that the district business might as well be conducted by the chairman without the council...'. The council meeting adjourned after two other councillors 'retired'.

**November 3:** *The S.A. Register* (p.2) notes the opening of the Balhannah School, 'It is a handsome stone building, comprising a large school-room and a suite of apartments for the master and mistress...'. 'Resolved that the Council regret to find that the Central Board of Education should have thought fit not to entertain the application for aid in the erection of a School House at Inverbrackie forwarded and recommended by the council'. The Board of Education urged its reconsideration. One point stated that, 'The council consider that there are sufficient children in the neighbourhood to support two schools (the other being at Woodside), and the population is rapidly increasing'.

**December 3:** 'The Chairman reported that with Councillor Lauterbach they had visited the school at Charleston...and were highly satisfied with the progress made by Mr. Taylor's

pupils..., and also that Lauterbach and several other gentlemen...visited the school at Woodside and Inverbrackie conducted respectively by Messrs. Howards and Ferguson were much gratified by the progress exhibited...the schoolhouse at Inverbrackie was in a ruinous state and would be untenable another winter'.

**December 13:** Francis Duffield resigns as chairman over the Inverbrackie School issue. The council accepted this resignation and resolved: '...that in accepting the resignation the council believe that such an occurrence as that referred to by the chairman would not have taken place, had the chairman refrained from obtruding his private views, on a public board, and directly adverse to an Application from this Council to the Central Board of Education'. The Council appointed W. Lauterbach to take over as Chairman.

After the sudden death of the Inverbrackie schoolmaster, James Ferguson, in 1859, the school was closed and most of the scholars went to the one at Woodside with the matter of a new school at Inverbrackie being abandoned. Instead a public school was subsequently opened at a settlement about four miles south of Woodside called Manxton.

#### 1859

**Flour mills:** Parliamentary Paper No.5 of 1850 records that there were 5 flour mills in the Onkaparinga district in 1859, possibly 2 at Lobethal, 1 at Charleston, 1 on the Adelaide-Woodside Road and 1 at Hahndorf. By the mid-1860s there were only 3 left operating in the area - one each at Lobethal, Charleston and Hahndorf.

**April 23:** *The S.A. Register* (p.3) reports from Woodside that: 'This township is improving very rapidly. Buildings are springing up all around. The newly-erected Court-House is a very substantial edifice of hewn stone. It consists of a large Court-room and Magistrate's and clerk's offices. There is a great want of police, but I believe it is the intention of the Government to establish a station here shortly. At present there is not a single trooper in the whole district, the nearest station is in Mount Barker, a distance of 10 miles...'

**November 9:** The same correspondent in Woodside writes again that: 'New shops in the township are being built and residences and comfortable homesteads are springing up around us. Woodside within the last two years has assumed quite a different appearance. Instead of its being a scattered, irregular village, built all on one side of the road, it now lays claim to much greater regularity since the paddock on the western side had been laid out in allotments, and sold by the South Australian Company. The buildings on the side bid fair shortly to equal, if not surpass those which stand opposite, I am happy to say that we shall shortly have a good road to the city...'

**December 28:** *The S.A. Register* (p.3) reports from Balhannah and Oakbank:

We have now at this place, within a distance of about a mile from each other, two substantial schoolhouses, at which examinations of pupils have recently been held... At Oakbank there are, as regular daily attendants, between 40 and 50 children.

On Sunday, the Primitive Methodist Chapel on Bonney's Flat was opened for...worship. This body of Christians have been in the habit of holding a service at Oakbank...The schoolroom has been used for this purpose. There is besides, already established, a well-attended Sunday School. (See also, *The Observer*, 24 December 1859, p.3).

### 1860

Schools, according to council minutes there were now six 'public' schools in the Onkaparinga district and they were located at Woodside (69 scholars), Manxton (44 scholars), Charleston (36 scholars), Lobethal (52 scholars), Hahndorf (71 scholars - NB at one stage the Lutheran and public schools were combined), and Balhannah (46 scholars). However, from Parliamentary Paper No. 98 of 1861, *Statistics 1860-1, School Returns*, it seems that there were 10 'Licensed School' (4 'In Trust' and 6 'Licensed') in the Onkaparinga District Council with 11 teachers and 381 enrolled students. There were also 4 'Private Schools' with 4 teachers and 271 enrolled students - these would have included the Lutheran Day schools at Lobethal, Springhead and Hahndorf - making a total of 14 schools in all.

**January 24:** From Woodside *The S.A. Register* reports that:

The foundations of the Police Station are excavated, and the contractor is going to commence immediately...it will be placed in front of the Court-House, and the two buildings will add considerably to the appearance of the township...the contracts on the main road from Oakbank to this place are proceeding to all appearance satisfactory. It will be a great boon to residents when the road is completed.

**February 22:** The above newspaper notes from Woodside that:

Within the last week. Mr. Rounsevell, the enterprising mail-contractor has put a very new omnibus upon the road, giving us the luxury of a direct and daily conveyance to the city.

**May:** Telegraph line from Adelaide to Mount Barker completed, and also the line from Mount Barker to Strathalbyn was opened on the last day of the month.<sup>60</sup>

**June 16:** Branch telegraph line from Mount Barker to Woodside opened.

### 1861

**April:** The Census held this month recorded that the population of the Onkaparinga District Council was 3,279 (1,681 males and

1,598 females) and that there were 661 houses in existence, only 608 of which were inhabited. Of the 661 dwellings, 315 were of wood and 258 were of stone or brick; 259 had two rooms and 110 four rooms.<sup>61</sup>.

### 1862

Balhannah Inn: the licence of the hotel expired in this year for the last time and was not renewed.

February 1: *The Observer* (p.8) notes the opening of the new Wesleyan chapel in Woodside. This was built alongside the earlier church erected in 1851.

March 18: On this day the 15th annual Exhibition of the Mount Barker Agricultural and Horticultural Association was held at Woodside. *The Farm and Garden* of April 17 (p.155) reported that:

The weather was fine and the attendance was estimated at not less than 800,...Amongst the visitors were His Excellency Sir Dominic Daly, the Hon. Chief Secretary..., the Hon. Treasurer..., the Hon. Attorney General..., the Hon. Commissioner of Public Works..., the Hon. A. Forster, M.L.C., Mr. W. Townsend, M.P., Mr. W. Duffield, M.P., and Captain Hart. A rustic arch of evergreens was erected across the road at the entrance of the township, bearing the inscription 'Welcome, Sir Dominic Daly'. Addresses were presented to His Excellency at the Court-House from the office-bearers of the Association and from the District Council of Onkaparinga. The pavilion was erected opposite the Bedford Hotel, and the live-stock was exhibited in the adjoining cattle-yards. ...the dinner was held in the evening at the Bedford Hotel. About 100 guests were present including His Excellency and the gentlemen who had attended him from Adelaide.

June 26: The above newspaper records the 're-opening' of the Caledonian Church, Inverbrackie.

### 1863

November 12: In the *S.A. Government Gazette* the township of Woodside is proclaimed a Police District under the Police Act of 1863.

### 1864

Wheatsheaf Hotel traded for the last time in this year, its licence expiring on March 25.

May 9: A plan is made of part of Section 5036 to be subdivided into the 18 allotments of 'Woodside Extension', however, by 1870 a Seth Ferry owned all of Section 5036 except for allotments 1 and 5.

November 5: *The Observer* (p.4) notes the laying of the foundation stone of St. Peter's Lutheran Church in Woodside on October 31.

1865

**January 14:** *The Observer* reports on the laying of the foundation stone of St. Thomas' Anglican Church in Balhannah.

**April 29:** The opening of St. Peter's Lutheran Church at Woodside is covered by *The Observer* (p.4 Supp.)

**November 4:** The same newspaper records the laying of the foundation stone of the Primitive Methodist Chapel at Murdoch's Hill. The church was opened in June, 1866.

1866

**March:** The Census records that the population of the District Council of Onkaparinga in 2,963, a drop of 316 from the 1861 count. There were 609 houses, a decline of 52.<sup>62</sup>

1867

Parliamentary Paper No. 10 of 1867 (*Agriculture and Livestock Statistics* to 31 March 1867) Table IX, 'Classification of Holdings' reveals that in the Onkaparinga district there were a total of 336 holdings comprising 39,426 acres. Of these 336, 80 were between 100 and 200 acres in size and 79 between 50 and 100 acres. Only 19 had more than 350 acres.

R.P. Whitworth's *Bailliere's South Australian Gazetter and Road Guide* containing the most recent and accurate information to every place in the colony is published by F.F. Bailliere.

Descriptions of placed in the Onkaparinga district were included.

**January 2:** Branch telegraph line from Woodside to Mount Pleasant via Mount Torrens opened. This was the result of an 1865 petition submitted by residents of Blumberg and Mount Pleasant requesting that the telegraph be extended from Gumeracha to those two townships, however, the Superintendent of Telegraphs recommended a new branch line from Woodside rather than an extension of the existing line.<sup>63</sup>

**March 26:** Caleb Biggs is granted a wine licence to operate a wine shop which was the forerunner of the Forest Range Hotel (licensed March, 1884). Biggs' wine shop 'filled the gap' left by the closure of the Splitters Arms Hotel, which only operated from 1857-9.

**December 9:** An auction is held by Green and Wadham at Gilleston where 30 of the original 51 allotments (from the 1858 subdivision) were for sale. The auction plan showed that 3 allotments of the 51 were set aside for a school reserve, a market reserve and the Wesleyan Chapel, so that it appears that only 17 allotments had been sold since the township was first laid out in 1858.<sup>64</sup>

1868

**May 14:** *The S.A. Government Gazette* notes the Revision of Wards in the District Council of Onkaparinga. Although there

are still five wards they are now named Charleston, Woodside, Hahndorf, Oakbank and Lobethal with a representative from each ward being on the Council.

**July 15:** The *S.A. Register* (p.5) in its coverage of colonial industries gave this description of the Oakbank Brewery:

Messrs. J. and A.G. Johnston's brewery is situated in the township of Oakbank, on the Onkaparinga River, District of Onkaparinga, County Adelaide. It is 19.5 miles from the city and was established as early as 1848. The buildings are very spacious, the malt-floor alone being capable of malting 200 bushells per week, although owing to the scarcity of barley (little or none being now grown in the district), English malt is at present principally used. Above the malt floor is a large granary extending over the entire buildings, adjoining which is the kiln, about 18 feet square, for the purpose of drying the malt. The bottom of the kiln is covered with perforated iron, and is heated from furnaces beneath. The office is situated on the righthand entrance. Nearly all the mechanical work is done by horse-power. Large coppers for boiling the beer are fixed sufficiently high that the liquor can run from them through spouts into the coolers, two in number. The tubs for fermentation are placed in the centre of the cellars, sufficient to accommodate one hundred hogsheads. The firm employs constantly eight men, but in the summer months extra hands are required. Large commodious stables for eight horses, besides sheds of wagons, carts etc., are rested on the premises, which on the whole are most complete. The trade of this brewery is considerable; extending east as far as Callington, a distance of 18 miles; south to Strathalbyn, 23 miles; and north to Mount Pleasant, 20 miles. Messrs. J. and A.G. Johnston have lately enlarged their business operations by occasionally brewing ale especially intended for bottling. They have already a moderate trade in this article. In connection with this establishment there is a lemonade, aerated water, and ginger-beer manufactory, from which during the summer a large quantity of the light beverages is turned out. Two men and a boy are constantly employed in this branch.

14 May, 1868.

#### 1869

Bismuth discovered near Balhannah. While prospecting for copper in the areas worked by Cornish miners in 1850-51 (Section 4048), a party of miners discovered a rich lodge of bismuth and the Balhannah Mining Company Limited was formed with a capital of £4,000. A stone engine house, boiler house, smelter and chimneys were built and the mine continued work until early 1876 when the severe slump of copper prices on the world market caused it to close (the Company was not wound up however until late 1877).

Also in the second half of 1869, copper was discovered near Grünthal with the owners first working the lode in January, 1870. The Grünthal Mining Company was formed in 1871 and, with the increased rise in copper prices, built a crushing and smelting complex the following year. The smelting works commenced operations in 1874 but the mine closed in 1876 due to the same international fall in copper prices which caused work to cease on the Balhannah mine. With the collapse of these two ventures, there was no more major mining activity in the Onkaparinga District until the discovery of gold near Woodside in 1881 precipitated a 'boom' of state-wide importance in the area.

A school is started at Jerry's Flat in the Forest Range area. In July, 1871 the Central Board of Education appointed John Brock Fry to the position of teacher at the school, which he was to hold until his resignation on December 31, 1900. When the South Australian Education Act was passed in 1875 the school officially became a Public School.

New schoolhouse for the Lobethal District School opened.

#### 1870

Cobb and Co. lease 63 acres of pasture and the house and stable (Section 5036) in the Main Street, Woodside. Used to accommodate drivers between Adelaide and Woodside and stable pasture horses. It was the major coaching station in the district. (The Adelaide-Lobethal coach travelled the Coach Road which came up Grasby Road, through the west side of the Wicks property then along to and down through Vernon Park keeping on the east side of the creek until it formed Swamp Road opposite where the Lenswood Research Office now is.)

#### 1871

Lobethal Cloth Factory established in F.W. Kleinschmidt's dis-used brewery, the equipment of which had been sold to J. and A.G. Johnston, of Oakbank. The original syndicate comprising Messrs. C.F. and F.A. Kumnick and F.W. Kleinschmidt was superseded by a new company formed in 1872.

Census held in April indicated a small decline in population and houses in the Onkaparinga district during the five years since the Census of March 1866. The district now had a total of 2,898 residents (1,397 males and 1,501 females) and 600 houses. The same Census recorded that 207 people lived in the Woodside area, 152 in and around Grünthal, 95 in and around Oakbank and 27 in Balhannah.<sup>65</sup>

Schools, from *Parliamentary Paper No. 9A of 1871*, *Census, 1871-School Returns*, it appears that there were 12 schools in the Onkaparinga district - 3 'In Trust' and 9 'Licensed' having a total of 19 teachers and 566 enrolled students. *Parliamentary Paper No. 73 of 1872* containing the Report of the Education Board for 1871 lists schools at Balhannah, Charleston, two at Hahndorf, Jerry's Flat, Lobethal, Manxton, Oakbank, Springhead and Woodside. The total average daily attendance of students at these schools was 497.

**July 15:** Authority given to W. Wadham, land agent to sell lands in the Gilleston estate (Balhannah) subject to leases and land purchased on terms, the purchase money to be paid to O.H. Gilles, the beneficiary. Due to the clauses it was many years before all the land was sold.<sup>66</sup>

Charles Marks (blacksmith) settles in Oakbank. His bellows were of the hand-blowing type; he employed 8 flormen and 3 forges were kept going using torch flames for lighting. His son, Edward, continued the business. The blacksmith store was a local meeting place and in winter-time steel rods were immersed in the beer to heat it up. The men played marbles and Charles Mark's same sixpence bought many a pint of beer from Pike's brewery across the road. Hermann Rose also opened a wine saloon (licensed to sell only wine) in the main street of Oakbank. It was later taken over by William Tell Rose and his wife Hilda née Wuttke who built it into a thriving business.

The settlement at Verdun expands with an influx of people of English ancestry. Storch purchased parts of Section 3816 and established first a tannery and when that polluted the nearby Onkaparinga River changed over to a wattle bark mill which produced tan bark from the tanning industry. Edward Kromm established a weaving factory, which on his death was leased by Haase and Rieger. It was then sold to Willhelm Stellner and was burnt out in 1878.<sup>67</sup>

### Mineral Wealth and Visions of Mineral Wealth Untold, 1872-1890

Deborah Jordan

Recently Brian Dickey has written that: 'History can celebrate. History can possess conscious unity as themes are explored. It will express vitality as it observed humanity whether good or bad'. History, too, can be participatory and this chronology is conceived as an attempt to draw on local resources and memories. Many organisations were contacted and asked to write a brief outline of the history of their group, and the responses have been included here. But as such it is only a beginning and readers are asked to contribute further information to more fully express that vitality of their own history. B. Dickey (ed.) Overview, 'Ideas for Local History', Papers presented at a seminar on 20 October 1984.

### 1875

Mrs. R.B. Colley conveys the property (now the Johnston Memorial Park part section 4014) to J. and A.G. Johnston. For a greater part of the century the property has been used as a sports ground, chiefly for football and cricket.<sup>68</sup>

**December 6:** The Oakbank Racing Club formed. Section 4017 was first being used as a racecourse by about 1867, the land being made available by the Johnston family. By 1874 it was a well established annual event. In 1876 the former Handicap

Steeplechase was renamed the Great Eastern Steeplechase. In 1879-80 a grandstand to seat 450 people was built as the popularity of the meeting grew and improvements were made to its course and surrounds.<sup>69</sup>

#### 1876

The Oddfellows (Woodside) considered using the Lutheran Church of St. Peter's as a hall when the congregation amalgamated with St. Paul's, Lobethal. The Oddfellows had previously loaned the trustees £230 for the building of the church and when the Lutheran Church faced difficulties with repayments the Oddfellows offered reduced rates, however, the mortgage was eventually called in and the property sold to the Presbyterian congregation from Inverbrackie. In 1886 the Independent Order of Oddfellows, Manchester Unity Friendly Society in South Australia, Onkaparinga Lodge erected the Oddfellows Hall at the cost of £499/6/6.<sup>70</sup>

**August 28:** Death of James Turnbull Thomson, 'founder' of Balhannah, from exhaustion and exposure near Port Adelaide. His idiosyncratic diary laced with introspective insights survives and also his memoirs, Occasional Letters and Morning Dreams dating from 1829. He had left Balhannah in 1860 seeking more privacy after the influx of miners into the area and in 1872 had requested from Sir W.W. Hughes a life annuity in exchange for his Balhannah property.<sup>71</sup>

#### 1878

**June 3:** A meeting held in the rooms of the Young Men's Improvement Society, Woodside chaired by Rev. J. McBean to reform the Woodside Institute, arrange a new location and room through Mrs. Green and formulate new rules and regulations. Apparently the earlier Institute and its library had been housed in the property of Mr. J. Halstead. A year later there were 64 members and plans were being made for the erection of the Institute building.<sup>72</sup>

#### 1879

**November 18:** Public meeting in Woodside to consider the building of an Institute. A building committee and a committee to canvas for subscriptions were formed. The foundation stone was laid the following year by W.H. Bunday, M.P. on land presented by the S.A. Company. The building, designed by Messrs. English and Deward containing 2 large front rooms, a hall, a storage and dressing room was built at the cost of £1,200. The trustees were James Johnston, T. Hutchins, R. Caldwell and Dr. Esau.<sup>73</sup>

#### 1880

Establishment of the Mt. Barker Courier, the district newspaper. The issue of land alienation was given prominence in its pages and the editor argued that the 'best portion of our land is held by absentees' (the S.A. Company) 'who in the past leased land for 3 year periods and stipulated only 20 acres be farmed, the remainder left for grazing, hence

quenching all desire to improve buildings, houses and fences'.

Regulations introduced for the licensing of guns.

J.C. Grasby established the Glengyle Jam Factory.

The horse named Gunn accused of missing a circuit in the Great Eastern Steeplechase after winning it.<sup>74</sup>

4 flour mills operate in the area; one at Hahndorf employing 4 hands; 1 at Lobethal employing 2 hands and 2 in the 'Onkaparinga' with 6 employees.<sup>75</sup> Landscape in the 1870s through the 1880s and 1890s small scale and more diverse farming became prevalent.

### 1881

**February:** In the debate preceding the elections, the land issue was prominent. The argument for taxation on property was put forcibly in the Mt. Barker Courier: 'We shall be able to get at least a little out of agricultural companies and absentees - Hitherto we have got nothing, the mere fact of making them pay something will be a great point gained.'<sup>76</sup>

**April 29:** Election results indicate the majority of voters were in favour of reform of the Legislative Council, in favour of the taxation of property and not in favour of protectionist policy.

The boom in the mining industry brings wealth, prosperity and an influx of people to the area. D. McCracken discovers the Bird In Hand Reef and the Balhannah Freehold Gold Mining Company was formed. Every miner had to have a miner's right. The fee was 5s. per annum. A miner's right was issued to any 'person' (above 16 years of age) on crown land. There were further stipulations about the size of the claim (larger areas for mineral leases compared with gold leases) and for the working conditions which had to be consistent employment (i.e. 8 hours for 5 working days and 4 hours on Saturdays).<sup>77</sup>

New school built at Woodside; Grünthal School opened.

### 1882

Nest Egg Gold Mine opened; initial operations commence at Ridge Mine and the Grünthal Gold Mining Company re-opens the Grünthal Mine.

In Quiz's tourist guide to Woodside 'Quiz' recalls the township of Reefton Heights associated with the Bird In Hand mine and the first sale of allotments;

Theodore Bruce was the auctioneer - most eloquent man, Theodore - and on the occasion he was more than usually eloquent, because he believed in his subject. Plucky Robert Cooper, of the 'Tiser, stuck to the Bird through good report and evil report, and deserved a reward which he has not so far received. Bye-and-bye, the mines may be worked successfully, and then the truth, 'some must sow, and others must reap', will be verified. It is not altogether true in the case of the Woodside Mines. The Bird paid two sixpenny dividends to the shareholders, and then went on extracting dividends from them.<sup>78</sup>

October 3: Permission from the Country Road Board given to the Onkaparinga District Council to construct footpaths in Woodside.<sup>79</sup>

#### 1883

John Attenborough leases land from J. Halstead and establishes a slaughterhouse in Woodside.

November 28: Railway line from Aldgate to Mt. Barker Junction opened by Governor Sir William Cleaver Robertson who travelled on a special train. Railway stations at Balhannah and Ambleside (Grünthal) had been built and also a station master's house at Balhannah. The contractors were Messrs. Baille, Davies and Wishart and the contract price for the Aldgate-Nairne-Mt. Barker section was £120,000.<sup>80</sup>

#### 1884

The Lone Hand Gold Mine opened.

Jerry's Flat school replaces the Forest school. A post office is opened.

Council Meetings (held previously at the Woodside Hotel) transferred to Thomas Hutchins' place of business in the main street of Woodside.

A variety of functions are held in the flourishing Woodside Institute ranging from meeting of 'The Blue Army', the Oddfellows and the Salvation Army. The Institute houses a library, including periodicals and newspapers and facilities for draught and chess players.<sup>81</sup>

#### 1885

Robert Phillip Keddie opens an emporium at Woodside.

The first mill erected in Balhannah for processing wattle bark for tanning built at the rear of the Golden Cross Hotel, run by Broadleaf Syndicate with Alfred L. Thrupp as their representative. It operated for about a year and was then replaced by one built on Mr. Witte's property opposite the P.O. The bark was cut by a series of circular saws on one spindle into lengths of 3-3.5 inches and then exported. Water for the steam engine was drawn from a well.<sup>82</sup>

Mr. Schunkay becomes licensee of the Stanley Bridge Hotel, initially called the Fourth Hill Inn, renamed The Ford Inn and finally given its current name by John Stanley who also built the bridge at Verdun.<sup>83</sup>

#### 1886

The Bank of Adelaide opens a branch in Woodside. The first manager was R.W.V. Mahnhe. Branches were also established at Mt. Torrens (1886) Balhannah and Oakbank (1937). The Commercial Bank in Woodside (established in 1880) was forced to close with a large overdraft.

Henry Pike founds the Dorset Brewery.

Mr. Robert Caldwell MP fails to get a Bill on female suffrage through the S.A. parliament. A similar bill was thrown out by the Legislative Council in 1890. It wasn't until 1894 under the Kingston Government that Women's suffrage was

finally achieved after lobbying by the Suffragettes and Women's Christian Temperance Union. Mr. Caldwell had migrated from Scotland as a child. He later served on the Onkaparinga District Council and was one of the first presidents of the Institute before becoming the local member of parliament.<sup>84</sup> He wrote poetry and preached at the Wesleyan Synagogue.

#### 1887

Telegraph station opened at Balhannah.

First express trains between Adelaide and Melbourne.

Sections 5001, 5003, 5004 and 5005 originally set aside as Aboriginal Reserves were subdivided as Homestead and Workingmen's blocks, as part of a scheme intended to alleviate problems faced by labourers with irregular or poorly paid employment. The area north of Oakbank was originally known as Cottontown. Initially land was leased (21 years) but it was later sold. Occupiers were expected to establish a degree of self-sufficiency while working as employees in local industries.<sup>85</sup>

#### 1888

Part of Hahndorf and some sections of the Onkaparinga District Council ceded to the District of Echunga, the remaining portion being renamed Balhannah.

Control of main roads vested in the council; annual grants being made to assist in their upkeep and provide for their construction.

**October 6:** First meeting of the Board of Health. The 1873 Public Health Act to improve sanitary conditions stipulated the formation of a local board of health, the appointment of an inspector 'of nuisances' (Mr. Joseph Harris, paid 15/-) and an officer of health and certain requirements in the construction of abattoirs, stables, 'privy accommodation' and drains etc.<sup>86</sup> Meetings included reading of Inspectors' reports in response to complaints, usually of pollution and the licensing of slaughter houses but occasionally odd cases appeared - such as when the Church of England cemetery at Balhannah was sited too close to the township (1890). Outbreaks of infectious diseases such as typhoid, diphtheria and influenza in the district were also closely monitored.

#### 1889

The Onkaparinga Co-operative Cheese, Butter and Produce Company Ltd., formed by the S.A. Company to process the milk of its numerous tenant farmers in their 80 acre properties along the Onkaparinga Valley. 1100 shares at £1 each were offered. G.F. Osborn was the first manager. It was later renamed the S.A. Farmers Co-operative Union Ltd. and closed in 1908 under its original agreements owing to a large proportion of shares being held by non-producers of milk. One of 32 co-operatives established in country centres, Mr. Robert Caldwell, M.P. and other members of the Agricultural Bureau took an active role in its early years.

The S.A. Company presents further adjoining allotments to the Woodside Institute and a banqueting room and council chamber were then added to the rear of the existing building. Mr. Rowland Rees, M.P. was the architect and Mr. Brockhoff the contractor.

The Government declared the district came under the Sparrows Destruction Act. Later an inspector was appointed and £10 was offered in prize money for the greatest number of heads and eggs collected.

### Depression, War and Transition, 1890-1939

Deborah Jordan

#### 1890

Teacher's residence built at Oakbank.

An English company purchases the Bird In Hand mines, and only prospecting work was carried on at the Ridge. Like many other South Australian towns, Woodside is affected with the slump in mining, having reached its apex of prosperity in the years 1882-1890.

Soil in the Balhannah area worked out after bad farming techniques without either fallowing, rotation of crops or manuring.

#### 1891

April 18: Death of James Johnston, brewer.

The *Courier* regularly records the amount of 'flux and firewood sent away by rail'. Nearly 300 tons of ironstone and marble flux and over 100 tons of firewood were despatched weekly.

Building slate of high quality found at Grünthal used in the Education Building in Flinders Street. Wishart's Quarry supplied stone for St. Paul's Lutheran Church in Hahndorf, while the quarry on the Gallasch property yielded stone for Hans Heyesen's Studio, the Hahndorf Bank Rotunda as well as various houses and sheds.<sup>87</sup>

#### 1892

Education free to the compulsory age and standard.

Rabbits become the ruin of many large landholders.

Candidates for the forthcoming South Australian election address the problem of land ownership and the taxation of landowners. Some advocate that land should be resumed by the State, which should buy out the owners of the large estate and lease the land to would-be smallholders.<sup>88</sup>

#### 1893

South Australia plunges into serious economic crisis. The National Bank at Lobethal was forced to close its doors - it reopened the following year with Alexander Lorimer as manager, the Commercial Bank operated at Woodside from 1880-1886 and

also a Bank of Adelaide (which later moved to Lobethal). Business was depressed by the low price of many of the key commodities produced - wheat, copper, silver and wool.<sup>89</sup>

The Onkaparinga Agricultural, Horticultural and Floricultural Society formed. The Secretary was Mr. Gusthard Friedrich Lauterbach. The society continued to flourish through to the mid 1930s.

**September 9:** Letter received from the council solicitor stating that Mrs. Bowden's name must not appear on voting papers. As a woman could not be nominated as a councillor if it appeared the papers would be invalid.<sup>92</sup>

#### 1894

George Frederick Osborn (1864-1904, b. Ballarat, son of William Henry Osborn) establishes the Balhannah Cheese and Butter factory where he was manager for 5 years. For some considerable time the need for a factory had been felt by the farmers of the surrounding district who found it difficult to make a satisfactory disposal of their milk. At Woodside the Onkaparinga Cheese and Butter Factory closed briefly for a year. Using the most modern equipment, G.F. Osborn built up a flourishing business. Many varieties of cheese were made, winning gold medals in various exhibitions in Australia and overseas. An export trade to England in cheddar cheese was established. Ida Osborn employed local women to make muslin bags to place around the newly made cheese.<sup>91</sup>

South Australian Government Produce Department inaugurates the export of apples.

#### 1895

Messrs. J. and G. Lauterbach open a second factory of the Onkaparinga Cheese, Butter and Produce Factory in the old Methodist chapel at Woodside, and build a creamery at Murdoch's Hill. Refrigeration facilities were introduced.

**June 17:** Boundary between Districts of East Torrens and Onkaparinga altered.<sup>92</sup>

#### 1896

Severe drought affects farmers in the O.D.C.

#### 1897

The first military contingent leaves South Australia to fight in the Boer War. Britain had called for volunteers and a government contingent of 125 men was sent, a second and a third, 'the South Australian Bushman'. Other forces were despatched later which included among their ranks a number of men from the Onkaparinga District Council area. Imperialism and loyalty to the empire was strong; there were frequent fund-raising events such as a 'continental entertainment at Oakbank Race-course (January 1900) to benefit the sick and wounded in the Transvaal War', and after many of the battles successfully fought 'patriotic celebrations' were held. At the relief of Ladysmith, for instance, in early 1900 at Woodside

there was an evening procession of 200 people with a meeting to form a mounted rifle defence corps and at Oakbank 50 men and boys carrying flags and rifles fired 50 rounds at imaginary Boers.

#### 1898

Bumper harvest leads to the return of general prosperity after repeatedly poor harvest throughout the mid 90s.

Balhannah Copper Mines first worked for copper.

#### 1899

New schoolroom built at Oakbank.

The 'Folly', Grasby Road used as a tannery by Mr. Lawrence.

Balhannah Freehold Gold and Copper Co. No Liability offers 40,000 shares to the public to acquire and work the Balhannah Mine and work the reefs of gold, copper and bismuth.<sup>93</sup>

May 2: The Inspector for the Watershed (Mr. Von der Buch) arranges the clearing away of excrement under several of the bridges caused by 'doggers', a legacy, no doubt of the harsh conditions and degradation of the unemployed during the depression.<sup>94</sup>

#### 1900

February 6: The flourishing Women's Christian Temperance Union (Mt. Barker and Onkaparinga branches) held a convention at the Woodside Institution. Dedicated to temperance, the moral purity of home and the family and the issue of women's suffrage a public meeting was held on 'Liquor and Traffic' where 'household suffrage' was advocated. Services, discussion sessions and a public tea were also held. The surplus over expenses were donated to the Patriotic fund.<sup>95</sup>

April 13: Onkaparinga Pigeon Match where 700 birds were raced.

May 25: Relief of Mafeking. A long procession held in the Main Street in Woodside, with a 'contingent from Oakbank'.

August 10: The Literary Society is addressed by the feminist Catherine Helen Spence on the topic of 'Effective Voting'. 60 members were present. An extremely active group the Literary Society apparently held monthly meetings to discuss a wide range of contentious topics.<sup>96</sup>

October 5: Annual 50 mile bicycle ride between Balhannah and Mt. Pleasant.

#### 1901

Federation of the Australian States. As there were no longer any duties to pay on goods passing over State borders, South Australian manufacturers and merchants could send goods more cheaply to the eastern States.

Wool sorting classes and quadrille dancing classes held at Woodside.

1902

New public school built at Woodside.

1904

Balhannah case and timber mill opened by Henry Laurence North of Balhannah. After operating for about 5 years the mill was moved to a site near the railway station.<sup>97</sup>

Sydney Manton Verco, M.B.B.S. practises as a doctor at Woodside. He later became the Onkaparinga District Council Health Officer.

Reginald Lancaster Beddons purchases 'Riverside', the 130 acre farm at Balhannah.

1905

**May:** The telephone replaces the telegraph in Woodside. Henry Wicks (1854-1939) buys land at Balhannah and establishes the Balhannah Nurseries. His two sons Leonard and Norman also work the business trading as Wicks Brothers.<sup>98</sup>

**July 12:** The first edition of the Southerner published, 'Woodside's own local newspaper' edited and printed weekly by W.C. Humphris and C.E. Taylor. Containing a wide coverage of local news and some reference to State and overseas events, it took up many of the major issues facing primary producers in the area. On the issue of land taxation the editors supported government proposals which would have the effect of breaking up large estates often held for grazing purposes and bringing the land under cultivation. The paper only lasted for 9 months.<sup>99</sup>

**December 13:** A meeting of the Woodside Agricultural bureau discussed the best methods of making farming profitable on small holdings (100-200 acres). A combination of dairying and agricultural pursuits was advocated, especially the growing of peas and wheat. The response was varied; some farmers growing onions and potatoes as well, others sheep, and the general opinion being that it was very difficult to farm on only two sections (160 acres). The bureau held regular meetings to discuss a wide range of issues.

1906

**August:** The foundation stone for the St. Thomas's Parish Hall at Balhannah laid by Bishop Thomas.

The Woodside Butter and Cheese Factory obtain the first prize at the London Dairy show in competition with products from Australia and Canada.

Acetylene Gas Company lighting introduced - there were protests by those who thought lighting unnecessary believing few people used the streets at night and businesses closed as soon as it became dark.<sup>100</sup>

1907

A wagonette and pair of horses awaited the train twice daily at Balhannah to take passengers to Oakbank, Woodside, Lobethal and on to Mt. Pleasant.

Notable farmers in the Woodside area were described by the visiting writer May Vivienne: 'Many of the farmers have the very latest appliances for baling and unbaling their cows, notably Messrs. R. James and sons, whose admirably kept farm is a model of prosperity, and who supply the largest quantity of milk to the Onkaparinga Butter Factory. Over 40 cows are milked daily.' She also mentioned the two important butter and cheese factories in the district.<sup>101</sup> Dairy production rapidly increased as pastures and techniques improved.

**December:** At its annual fete the Oakbank Sunshine Makers (with a membership of 126) raise £50 for city and local charities. An active and important group (before the advent of the Welfare State) the organisation met monthly to raise funds reserving a portion for the 'needy and urgent cases in the district'. W.G. Johnston was the president and Mrs. Sarah Sutter was the secretary. The group existed until 1914.<sup>102</sup>

### 1908

**March:** Mr. Von Doussa at a gathering at Oakbank reviews the history of the Oakbank Club. It had existed for '33 years and 4 months, exactly a third of a century'. It had made such progress that as a country racing club it had no rival in the Southern Hemisphere. During that time £45,120 had been paid to owners in stakes, £12,500 spent on the course and on buildings; £27,330 on salaries, wages, printing etc. and £2,000 had been given as subscriptions to charities and in other donations.<sup>103</sup>

The South Australian Farmers' Union takes over the property of the Onkaparinga Co-op Cheese, Butter and Produce Company.

The Lenswood Cold Store established.

### 1909

**March 21:** First Anglican church service at Lenswood conducted in the Lenswood Primary School.

Diamond Jubilee services held at the rear of the vestry of the Inverbrackie Caledonian Church.

### 1910

The number of wards (5) in the Onkaparinga District Council increased to 6; Forest Range Ward being added, formed by including the Western portion of Lobethal and Oakbank Wards. The alteration in boundary wards was made so Oakbank and Woodside would not be divided by such boundaries. The following assessments and number of ratepayers were listed for the different wards:

Balhannah	£2,560	118
Charleston	£2,200	63
Forest Range	£1,620	107
Lenswood	£3,860	202
Oakbank	£2,760	94
Woodside	£5,060	146

January 21: The *Courier* reports on the 13th deputation of the residents of Woodside to the Minister of Education asking for the establishment of a district high school at Woodside. Primary schools would be served by the proposed high school.<sup>104</sup>

March 18: Mr. Henry Lawrence of Balhannah Saw Mills establishes a successful business making fruit cases out of locally grown stringybark and pine timber.

May: 17 cases of Diphtheria at Oakbank reported to the local board of health. The patients were isolated in the Racecourse buildings borrowed for that purpose. The Oakbank State School was officially closed for 20 days.<sup>105</sup>

### 1911

Registration, licences and rates introduced for the dairy industry under the Food and Drug Act of 1908. Rates initially were at a reduced rate. A local inspector was appointed. The following year the local authorities clashed with the Central Board; administration was suspended and fees returned.<sup>106</sup>

### 1912

Extensive bushfires in the Onkaparinga Valley.

Fred Boyton with his partner develops a Sampson 6.5 h.p. 2 stroke engine proto-type twin cylinder. The engine was fitted to a car chassis in preparation for tendering for the supply of motors to Casey Jones. Fred Boyton was a Boer War Veteran setting up the manufacture of engines carrying goods for the Farmers' Union. He had the first garage at Woodside and the first kerbside petrol pumps.<sup>107</sup>

The bark mill at Balhannah was demolished. After bark milling ceased (and the operation of the Broadleaf Syndicate) it had become a depot for J. Reid and Co., tanners of Hindmarsh. Then it was used as a community meeting place where socials, dances, Sunday School anniversaries and even wedding festivals were held.<sup>108</sup>

July 29: Emily Standard Discombe's premises at Woodside licensed as a Private Hospital and maternity home. Mrs. Catherine Harris also applied for a licence to use her premises as a private hospital and maternity home at Balhannah later in the year, paying a fee of £1. Later Mrs. G.F. Brown at Forest Range and Mrs. Lenthall at Woodside (1922) also took out licences.

### 1913

April: H. Pike and Co. purchase the Forest Range Hotel after the death of Caleb Biggs. Caleb's son, Albert Edward Biggs remained as the licensee of the hotel under the conditions that he would only purchase ale, porter, aerated waters and cordials from Pikes.

The foundation stone for the Anglican Mission Hall at Lenswood laid by his Excellency Sir Day Hord-Bosanquet, Governor of South Australia. The building was opened the

following year by his wife Lady Bosanquet. The hall was built by Alex Brockhoff on land donated by Mr. Fry.

#### 1914

The worst droughts ever experienced in S.A. exacerbated problems caused by rabbits, wild dogs and overstocking.

Mr. August Filsell and Mr. H.N. Wicks of Balhannah co-jointly built the first private cold store for fruit storage in Australia. Its initial capacity was for 3,000 bushels; by 1918 12,000 bushels. A small ice works was attached.<sup>109</sup>

The outbreak of World War 1. The South Australian Infantry formed the 10th Battalion, the first to leave for Gallipoli. An historian had written of how the war was to drag on for 4 years, bringing death and injury to thousands of Australian men and some women, hindering the State's economic growth and curtailing movements towards liberalism and greater equality. As the war progressed feelings against the German or people of German descent (as at Lobethal and Hahndorf) became stronger. Restrictions were placed on certain German citizens, schools were closed.<sup>110</sup>

The Glengyle Jam Factory (near Balhannah) closes because of difficulties in obtaining sugar, tins and labour. Begun in the 1880s, Mr. J.C. Grasby had decided to turn his surplus fruit into jam. The business (largely seasonal) grew and 3-4 extra hands were employed in the fruit season and much local fruit, especially quinces, plums and cherry fruits were used.<sup>111</sup>

#### 1915

Brewing ceases at Oakbank brewery but the production of soft drinks and cordials continued.

Work ceases at Day's limekilns.

**June:** Erection of police cell at Balhannah where a portable cell was carted from Reynella. A temporary police cell was also erected at Oakbank the following year.

#### 1917

A meeting held at the eastern end of Forest Range to discuss the establishment of a P.O. called 'Lenswood' derived from Lens in France, the site of a battle during the war. The first P.O. operated from Mr. Fenner's sly grog shop, later a converted garage. The first postmaster was Mr. Rogers, later Hazel Goldsworthy and Myra Green (Mason) and from 1924 to 1973 the postmistress was Mrs. Hilda Fountain, operating from her home.<sup>112</sup>

The second referendum on conscription lost, as too the one previously. South Australia voted solidly against compulsory military service.

#### 1918

**January 10:** The name Grünthal changed to Verdun. The former government defeated in 1917 had planned to use the Aboriginal name Tumbeela, meaning evergreen, however the feelings of patriotism triumphed. The name of Grünthal originally referred

to the southern region from Section 3849 to 3816. Klein Grünthal (little Grünthal) referred to the development as section 1922.<sup>113</sup> Lobethal was formally renamed Tweedvale.<sup>114</sup>

September 16: The railway line from Balhannah to Mt. Pleasant opened.

C.B. Correll retired from his position of coachdriver from Birdwood to Balhannah for 30 years.

November 11: Armistice Day, the official end of World War 1.

### 1919

S.A. Farmers Co-operative Union (formed in 1888) purchases the dairy produce business of Murphy, Fraser and Co. which comprised an Adelaide factory and sale rooms in Pirie Street and factories at Woodside and other places. The Woodside Factory specialised in milk by-products, cheeses of many types, such as Argene, Edam, Gouda and Tafteé; bacon and small goods, as well as sending thousands of gallons of milk to Adelaide.<sup>115</sup>

April: A large number of cases of influenza; 15 cases reported in Woodside alone and one death. Venues for a district isolation hospital were discussed such as the Oddfellows Hall or the Woodside Hall. The Oakbank School was closed for a period.<sup>116</sup>

### 1920

Balhannah Cold Store Company formed by Mr. Angus Filsell and Mr. H.N. Wicks. Other directors included W.B. Henderson, W.W. James, W. Keen, H.C. Pitt and W. Miller. It had an initial capacity of 24,000 bushels. Besides supplying the local trade, the company also exported apples and other fruit to the United Kingdom and Europe. Large quantities of potatoes and even gladioli bulbs were also handled.<sup>117</sup>

12 acres purchased for the Woodside showgrounds at the cost of £400. Mr. G.A.J. Lauterbach chaired the first committee and a working bee was held to clear and level the ground, remove the trees and shift the cattle. Later a cricket pitch, 2 tennis courts and a dressing shed were established.<sup>118</sup>

September 27: A public meeting was held at the Balhannah Parish Hall for the purpose of establishing an Institute, clubroom and library in Balhannah. It was decided to dedicate the building as a memorial to those who enlisted from the district to serve in WWI.<sup>119</sup>

### 1921

Cultivation of subterranean clover seed begins in the area as the use of superphosphates to increase the carrying capacities of holdings becomes obvious. With improved methods for collecting seeds there were large yields, a record being 10-12 cwt. per acre. Many threshing plants were installed. And by the late 30s 400 tons of seeds were harvested.<sup>120</sup>

1923

Onkaparinga Timber Company takes over the liquidated Balhannah case and saw mill, handling large quantities of local and imported timber for case-making, building purposes and the furniture trade etc.<sup>121</sup>

1925

September 17: Current switched on at the Onkaparinga Electricity Company Ltd. Mains extended to Ambleside Station through to Tweedvale (Lobethal) via Oakbank, Balhannah and Woodside and a branch line ran through Charleston to Mt. Torrens. The company was formed in May with a capital of £25,000 and included on the board - A.H. Spoehr, W.A. Storch, J.G. Jaensch and R. Stelzelberg. By 1927 it could deal with a maximum demand of 350 kVa. The plant continued to operate until 1946.

Messrs. Spoehr and son take over the Balhannah Cheese and Butter Factory and continue to produce dairy products until 1929, when it was closed due to the expansion of the whole milk trade. Milk was delivered daily to Adelaide customers by refrigerated transportation, thus greatly reducing the amount of milk available for processing in the factory.

1926

March 23: Tenders were called for the sole rights for showing pictures at the Woodside Institute - to be held nightly except Fridays and Saturdays. Mr. Wedd's tender of £1/10/- for 12 months was accepted.<sup>122</sup>

April: The Commonwealth Government purchases the Bird In Hand mine to be used as a Water Supply for the Defence Department Mobilisation Store and Camp and neighbouring township for £2,000. A pumping plant was installed at the mine drawing 96,000 gallons per day.

During the flush of the season 18,000 lbs. of butter were produced weekly and 1,000 gallons of milk handled daily by the S.A. Farmers Co-Operative Union Ltd. Most of the milk was treated for the city trade; the remainder being used in the manufacture of cheese, butter making, skim milk and casein. Smallgoods were produced in the 'Bacon Department' and an average of 80-100 head of cattle and sheep slaughtered weekly. The branch successfully exhibited butter and cheeses at Adelaide and country shows.<sup>123</sup>

December: 319 acres of land belonging to J.T. Murray of Woodside were compulsorily acquired by the Commonwealth Government. However, after he complained that there were other farmers willing to give land and that as a returned soldier he was the only Australian living in an area predominantly settled by Germans, his land was returned and the following year 245 acres were purchased from Mr. Sydney Tyers and Archibald Howard.<sup>124</sup>

1927

New Post Office at Lenswood opened.

**February 19-23:** Back to Woodside Celebrations include a grand procession and sports day; 'back to church'; Sunday School and School; a fete at the Institute and a grand continental; an Ugly Man competition; a sports tournament and an old-time dance. The committee included Cr. A.S. Hughes, Mr. C.W. Fowler, J.P., and G.F. Lauterbach, J.P.

Hermann August Spoehr, J.P. (1879-1964) first elected to the O.D.C., which he served for 24 years. He chaired the council for 11 years. Another notable councillor was Jan Gustav Schapel, J.P. who also was first elected in 1927, and served it for ten years.

### 1928

High unemployment in South Australia with the onset of the depression.

The Army Camp established at Inverbrackie. The railway line was extended so that troops could be transported to and from the city.

There were two nursing homes in Woodside: Cr. Corbin (Woodside North) and Mrs. Disher (Main Street) but no doctor's surgery.

### 1929

**March 1:** Apple Packing classes initiated at the Forest Range Packing Shed, continuing until 1968.<sup>125</sup>

Elmsdale Apple Cider, in connection with the Elmsdale orchard produced in the cellar of the Wicks' family cottage at Balhannah, because of the wastage of apples unfit for export due to black spot and codlin moth. Production ceased during the Second World War because of the difficulty in obtaining items such as preservatives and crown seals. The equipment was sold to Pike's brewery at Oakbank.

**October 19:** Official opening of the Onkaparinga District Hospital Inc. by Sir Alexander Hore-Ruthven, the then Governor. As Dr. Linn needed a suitable theatre for surgery, Rev. W.U. Bailey (of the Methodist circuit in Woodside) and Mr. G.F. Lauterbach, grocer, had canvassed the district to raise money - £1,000 was donated and the rest borrowed. 8 beds and staff accommodation were provided at the cost of £3,500. Miss K.C. Waterhold was appointed matron at £180 per annum. Until 1947 no regular government assistance was available and money spent on improvements and equipment had to be raised locally by annual hospital fetes, motor cycle sports, school concerts, balls and dramatic performances.<sup>126</sup>

### 1930

**February 20:** The Balhannah Uniting Church Women's Fellowship formed to help furnish the new church and raise money for missions etc. It had a committee to organise speakers and devotions and has participated in 'This Is Your Life' and parish affairs. Notable members have included T. Carmac, W.W. Miller, H.N. Wicks, H.B. Pitt and F. Norsworthy.<sup>127</sup>

**June 29-July 13:** Horace Trenerry (1899-1958) holds an exhibition of his work at his studio (Greengates) in Woodside. Trained by James Ashton, Fred Britton and at the South Australian School of Art and the Julian Ashton School in Sydney, Trenerry has been called 'the Monet of South Australia'. One of the greatest painters in Australia, he was gifted with a very subtle sense of colour. He lived at Woodside from 1923-1932 where, friendly with many of the local residents, he lived a bohemian lifestyle always on the verge of poverty. He was often seen out and about Woodside, although his later work of the landscapes from Aldinga to Port Willunga is better known.<sup>128</sup>

Thomas George Edwards established a very fine herd of Australian Illawarra milking shorthorns.

**October 12 & 13:** Jubilee celebrations for Verdun Methodist Church.<sup>129</sup>

### 1931

The only midwife registered in the Onkaparinga District Council area was listed in the *Government Gazette*. Alice Jane Carmac had been registered since 26.4.1922 at Balhannah, having been trained at the Royal Hospital for Women in Sydney.

The Balhannah Agricultural Bureau continues to flourish and offer information and expertise to local primary producers.

**December 28:** Fire reaches 100 yards of the Main Street of Woodside destroying 200 acres of grasslands, sheep, fencing and haystacks.

### 1932

**February 19:** Public Meeting to discuss the re-opening of the Balhannah Mine which began operations the following year.

**March 23:** Verdun Social Club formed to hold various activities such as debates, social evenings, game evenings, concerts, lectures and house a magazine library. In Woodside active clubs included the croquet club, the tennis club and rifle clubs.

**December 9:** Foundation stone of the Methodist Church at Lenswood laid.

### 1933

The Balhannah Branch of the Women's Agricultural Bureau formed, aiming to promote companionship, goodwill and friendship among rural women and to provide a forum to encourage interests in developments in rural life, cultural makers and the responsibilities of citizenship. The group has had a number of fundraising activities for state-wide projects such as the Autistic and Epilepsy Association, and the Guide Dog Centre. Initially the group prepared entries for exhibitions at various shows - such as the Royal Adelaide Show in 1934-1937 and the Woodside Show. Mrs. Jean Grivell has been active in the organisation for 41 years in varying capacities; Mrs. Dorothy

Carmac also has held office as State President and Regional Councillor.

#### 1934

Blackbird Mine opened on the northern side of the old Lone Hand Mine. Operations also began at the Bird In Hand Mine.

#### 1935

The South Australian Parliament agrees to restore many of the former German names to the towns.

#### 1936

**March 28:** Present church at Verdun opened. (The old church due to general deterioration and salt damp was demolished in 1966.)

**October 11-18:** Woodside Centenary celebrations. The Executive Committee was chaired by G.A.V. Lauterbach and included Messrs. H.C. Pfeiffer, W.V. Templer, J. Templer, J.R. Pfeiffer, A.M. Disher, F.E. Boyton, H.M. Giles, R.O. Langbein, A.E. Mertin, F.R. Brown, J.L. Cranwell, P.C. Reidel and H.R.K. Tidsell. The programme began with the arrival of the centenary train, was followed by a procession from the Woodside Station to the Recreation Grounds where the Centenary Gate was officially opened. After a reunion of old residents and friends at an afternoon tea there was a grand centenary ball in the evening. During the following 3 days there was a 'Back to School', a continental and novelty fair, a school sports, a football match, church services, a grand picture show and the crowning of the centenary queens - of Trade, Sports and the Dairying Industry.<sup>130</sup>

#### 1937

H. Pike and Co. build the hotel at Oakbank and transfer their licence from the Forest Range Hotel.

Large schoolroom built as additions to the Forest school.

**November 13:** The Onkaparinga Agricultural, Horticultural and Floricultural Society holds its annual show. The president was Mr. Pfeiffer and one of the most notable attractions was the log-chopping special.

#### 1938

**May:** The Consolidated school at Oakbank opened by Mr. W.B. O'Connell. It superseded the Balhannah primary school and also the one at Oakbank; 55 children attending from Balhannah; 49 from Oakbank.

H. Pike and Co. Ltd. discontinue brewing although the manufacture of aerated waters continued until its closure in 1974.

Maxwell John Vickers, J.P. (1894-1972) chairs the O.D.C. for 4 years. He was an orchardist concerned with the advancement and promotion of the apple industry and active in the Lenswood Coldstores.

Modern Times 1939-1983

Deborah Jordan

1939

Mr. H. Norman Wicks took over the Balhannah Nurseries, where over a quarter of a million young trees of various types were awaiting distribution.

**March 28:** Mr. H.A. Spoehr (Chairmen of the Onkaparinga District Council) called a meeting at Verdun, Balhannah and Oakbank to form circles of the Red Cross, dedicated to aid the sick and wounded of all nations; for assistance in public disaster, calamity or need, for improvement in health and prevention of disease and for the mitigation of suffering. Miss Middleton was the first president of the group in Balhannah until 1947, and acted as treasurer until 1952.

**May 4:** Manually-operated telephone exchange at Balhannah replaced by unattended automatic type trunk line calls at Woodside.

**September 3:** Hitler's forces invaded Poland, Britain declared war on Germany and the Australian Prime Minister, R.G. Menzies, announced that Australia was also at war. The camp at Inverbrackie expanded and was extended. The 10th, 27th, 43rd and 48th battalions were called up for 3 months' compulsory training. The camp commandant was Brigadier Arch Allen.

**October 15:** First open day at the Woodside camp, where the Church of England chapel was opened by the Right Reverend D.A. Nutter-Thomas, Bishop of Adelaide. Facilities included a camp HQ, a railway office, a SBSA agency, a P.O. and Commonwealth banking facilities and a Roman Catholic chapel. The YMCA and Salvation Army offered spiritual and moral guidance; there was an Area Theatre, a barber and the camp bath house had a capacity for 200 persons. Weekend trains conveyed soldiers to Adelaide on leave, and an officer and NCO were placed in charge of every 50 men. A town picket was posted at Woodside throughout the war years, under the control of the local police constable, to maintain order 'that mischievous soldiers often broke'.<sup>131</sup>

Onkaparinga District Hospital closed during the war when Dr. Jutner was on active service; he was later a POW. The hospital was let to families of officers stationed at Woodside Camp. The Jubilee account offers a tribute to the women who worked to clean and refurnish it for its re-opening - 'and after the cleaning, repairs and painting, there was still the money raising to be done' - notably by Mrs. Jutner, Miss Gale and Mrs. Beckwith, members of the Women's Auxiliary.<sup>132</sup>

**October 21:** Louis Murray Beckwith was appointed District Clerk of the Onkaparinga, replacing H.G. Tolmer. He held the position until 22 February 1954, when Gordon Douglas Perrin became District Clerk.

Woodside EFS formed during the war, one of the first formed outside the metropolitan area. It was also the first in the country to have a trailer pump. The first captain of the EFS was Mr. E.B. Turner.

November 8-10: Back to Verdun celebrations raised £187 for the Red Cross Society and Fighting Forces Comforts Funds. The celebrations included a 'Back to School', 'Back to Church', a sports meeting, a procession through the township, various amusements and side shows and an ex-digger competition. Active in its organisation were Mr. W.H. and Mrs. Spoehr, Mr. and Mrs. S.H. Grivell and Mr. W. Grivell.<sup>133</sup>

#### 1940-41

Units raised at Woodside during World War II were the 2/10, 2/21, 2/27, 2/43 and 2/38 Battalions (Infantry) and 48, 49, 50, 113 Batteries of Artillery. The 2/103 was incorporated into the 16th Division, with its Adjutant. At one stage early in the war there were 3,640 AIF troops in camp and 2000 militiamen. Almost all South Australian battalions that went overseas trained at Woodside. Some American troops were stationed there also.<sup>134</sup>

A virus known as 'Woodside Throat' spread throughout the camp. All leave was cancelled and AIF nurses treated soldiers in their tents.

Permits issued by the Onkaparinga District Council to local groups for licences for patriotic funds included: Woodside Patriotic Carnival Committee (held 2nd November 1940), Lobethal Farewell Committee, Woodside Hospital Guild, Oakbank Farewell Committee, Woodside Recreation Grounds Inc. and the following year, the Verdun Vigilance Committee, the Lobethal and District Hospital Association and Guild, Woodside Men's Soldiers' Farewell Committee, Woodside Kindergarten and Forest Range and Lenswood Servicemen's Members' Committee.

(Formed in 1942, the Verdun Vigilance Committee was an active fund-raising and social body organising support for overseas servicemen and the Verdun Memorial Gardens. Their minute books are held by D. Grivell, Verdun.)

#### 1942

In the Statistical Register figures were outlined for the number and description of livestock in each county. In the Onkaparinga there were 6,586 cattle, 4,283 of which were in milk and dry, and 303 heifers. There were 1,061 horses, 42,420 sheep (23,433 ewes) and 39,398 sheep and lambs were shorn. Twenty years later the number of cattle had increased by 2,000, 1,000 of which were dairy cattle. The number of horses had dropped to 225 and the number of sheep had nearly halved. Pigs (866) were also listed.

#### 1945

January 28: First meeting of the Volunteer Fire Brigades Association of South Australia held at Lobethal.

May: The Germans surrendered and the war in Europe came to an end.

**August:** Japan surrendered.

#### 1946

Woodside Power Supply Company taken over by ETSA under the Playford Liberal Government.

Balhannah Co-operative Society formed (from Balhannah Cold Store Company). The first committee of management elected by the members of the Co-op were Messrs. C.W.R. James (later appointed chairman), H.S. Petersen, S.C. Martin, W.H. Johnson and H.N.D. Wicks. Mr. A. Filsell was appointed manager. With increasing apple and pear crops in the district, progressive extensions have been made, up to the present. It is now owned by the people who work and trade with it in the district, and the surplus profit at the end of each month is returned to the shareholders. By 1957 more and more of the storage space was being used by potato growers for the storage of seed in the off-season, for cheese and meat products from local industry. The Co-op also bulk buys for its shareholders.<sup>135</sup>

A general store and motor garage built at Lenswood, then comprising a post office and Methodist church.<sup>136</sup>

#### 1947

The Woodside army camp used as a migrant reception and training centre known as the Woodside Holding Centre. Development of the camp was in the charge of Major A. Fraser. Brigadier E.L. Woods became the Immigration director. The first shipload of immigrants arrived when opening preparations were still being made and in the following twelve years 26,000 migrants passed through it. The camp had facilities to accommodate 2,400 men, women and children and included a canteen.<sup>137</sup>

Government subsidies utilised for the expansion and maintenance of the Onkaparinga District Hospital at Woodside.

#### 1948

**August 5:** Amscol Ltd. accepted the Council's offer of £1,450 for its Woodside property.

Annual meeting of the Woodside Progress Association raised £500 as profits from motor car and cycle racing, held on the Eight Hour Day on the Woodside circuit. Committee members included Messrs. R.D. Pfeiffer, S.G. Smith, S.J. Robertson, W. Peacock, W.R. Chisby and W.D. Erdmann (chair).<sup>138</sup>

#### 1950

Extensions made to the Lenswood Cold Store.

Wilfred Thomas Gale (b. 1902), farmer, became Chairman of the O.D.C., a position he held for 28 years. Holding the community in high regard, he believed it should be self-supporting in all areas of welfare, sport and local participation.

#### 1951

Last annual motor race held at Woodside on Eight Hour Day, which had benefited many local charities. A South Australian racing ban stopped the races when a person was killed.

**August 6:** Inception of the National Training Scheme under the National Service Act at the Woodside camp. 864 men from all over the State arrived for approximately 98 days training. There were several intakes a year. The camp was renovated and extended, 103 married quarters were built, a family store and the Woodside Camp Theatre, which was officially opened in 1955. European migrants occupied huts adjoining the trainees. The scheme lasted until 1963.<sup>139</sup>

#### 1952

Primary producers in the Onkaparinga Valley formed an active and flourishing union in an attempt to get producers to stand together. One of the first battles fought was on the price paid for their milk and over 100 primary producers were involved. Later a number of wheat farmers became involved and the United Farmers and Stockowners Association was formed. The regulation of milk prices came under the control of the Milk Board.<sup>140</sup>

#### 1953

**February 26:** Battalion Sports Day at the Woodside Army Camp.

**May 26:** Dinner to celebrate the Centenary of the Onkaparinga District Council.

#### 1954

**November 28:** The Premier, Hon. Thomas Playford, opened the Memorial Wing, Maternity Wards and staff accommodation (14 beds and staff accommodation) at the Onkaparinga District Hospital Inc.

#### 1955

**January 2:** Black Sunday bushfires. Bushfire laws drastically revised. Representatives from Woodside, Mt. Barker, Mt. Pleasant, Lobethal, Stirling, Bridgewater and Barossa Valley firefighting organisations attended a meeting sponsored by the Onkaparinga District Council, to discuss processes and protective measures.

**February 9:** First naturalisation ceremony held at the Woodside Institute, where Messrs. Stefan Dack and Francesco Natale, 'New Australians', after five years' residence in the country promised to 'obey the laws of the State, prepared to relinquish their allegiance to their homeland and take on the privileges of Australian citizenship, at the same time accepting the responsibilities of citizenship.' In the post war labour shortage, 85 New Australians were employed at the Lobethal Mill.

**March 31:** Mannum-Adelaide pipeline opened.

**June 22:** Inaugural meeting of the Lutheran residents from the Springhead, Charleston and Woodside areas to apply for peaceful dismissal in order to form a separate congregation at Woodside, adopting the name St. Johns Evangelical Lutheran Church at Woodside.

Foundation members included 46 families; 158 baptised members; 102 communion members; 44 voting members and 56 children. Previously, Woodside had been a preaching place under the pastor, H.D. Koehne. In the following year the foundation stone of the church was laid and the youth organisation, the St. John's Lutheran Society and the St. John's Lutheran Women's Guild were formed.<sup>141</sup>

**December 7:** The Oakbank Red Cross merged with the Balhannah group to form the Balhannah-Oakbank Red Cross. A flourishing and committed group, it participated in a wide range of fund raising activities, sponsored by the Queen, with baby competitions and later with the Floral Queens at the Festival of Arts Floral Days, visited patients in hospitals, the Julia Farr Centre and other Red Cross activities. Notable members were Miss Elizabeth Grivell, Lynette Pearson and Cynthia Aubrey and their length of service was extensive. The Loan Depot Officer, Mrs. E.M. Prosser, served in that capacity for 28 years. Others were recognised for their donations of blood.

#### 1956

Bulk handling facilities introduced in the Balhannah Co-operative Society.

The first Onkaparinga Girl Guides Company formed in Oakbank dedicated to the betterment of youth and to train girls to think for themselves and as future leaders, to be loyal to their friends, the Queen and to God. Mrs. Rex Duffield, president of L.A. for approximately 20 years, was largely responsible for the Girl Guide Hall being erected in Pike Street, Oakbank. Brownie packs (2) were formed in 1957 and 1974. Activities included involvement in State and regional camps and Anzac services. A third Brownie pack at Mt. Torrens was formed in 1963.<sup>142</sup>

#### 1958

All towns in the O.D.C. connected to mains reticulated water supply by the Engineering and Water Supply Department (E. & W.S.)

**July 6:** St. John's Lutheran Church, Woodside, dedicated and officially opened by Pastor T.W. Lutze. Together with the Trinity Congregation, Springhead, they established the Onkaparinga Lutheran Parish. In the actual building, considerable labour and cartage had been voluntary. In 1960 a Saturday School was established.<sup>143</sup>

#### 1959

The old church, originally Bonney's Flat Methodist Church, destroyed by fire.

Building commenced on the new utility room at the left rear side of the hall of St. Thomas' Parish hall.

#### 1960

**January 30:** Foundation stone of the hall erected at Verdun laid by Sir Alexander Downer. In the 1950s a district war

memorial was erected.<sup>144</sup>

Pines Oval, the go-kart Sport Ground built at Woodside.

### 1963

Cessation of National Service, however, the Woodside Army Camp continued its function as a training and holding centre for various battalions later active in the Vietnam war.

### 1965

**August 26:** Miss Alfrieda Marks received her 'laurel wreath' for 60 years of service to the Red Cross, from Lady Bastyan.

### 1966

Hills orchardists exported over a million cases of apples in 1965, 1/3 of the total crop of 600,000 bushels.

A check of dairy herd production records revealed that the dairy herd of V.L. and O.D. Kerber, Woodside, was among the distinguished group of dairy herds in S.A. which had averaged more than 500 lbs of butterfat production in 300 days.<sup>145</sup>

### 1967

Anglican Church at Lenswood became part of the Balhannah Parish and was named the Church of St. Mary Magdalene.

Inaugural meeting of the Lions Club at Woodside sponsored by the Burnside Club, chaired by W.T. Gale. Members came from Woodside, Oakbank, Lobethal and Carey Gully.

**May 9:** Inaugural meeting of the Balhannah Senior Citizens Club held at the home of Mrs. B. Aubrey, formed to bring together elderly citizens to enjoy friendship and entertainment together. Meetings were held at the Sodiers Memorial Hall and weekly bowls were run, organised by Mrs. E. Mangelsdor. With its own constitution, the committee drew up a 6 monthly programme of activities. The first president was Mrs. S. Paech, the secretary Mrs. I. Weurse. Mrs. L. Firch has also been active as a president and Mr. G. Beaumont as treasurer.<sup>146</sup>

**May 28:** Inaugural meeting of the Charleston Red Cross formed to raise funds for the Red Cross, attended by H. Huers and Mrs. V. Montgomery, a field officer from the Red Cross. The regional president was Mrs. Perce Graeber.<sup>147</sup>

### 1970

Wright Memorial Hall, Oakbank, sold to the Boy Scout Association.

The Balhannah area became the centre for the S.A. apple industry, producing 95% of the State's apples. The Lenswood coldstore, the largest coldstore in the Adelaide Hills provided storage for 109,000 cubic metres. From the 1970s crop varieties have diversified and the more traditional plums, cherries and apples have been complemented with the commercial growing of kiwi fruit, chestnuts, raspberries and flower crops.

There is also a growing interest in vineyards. In the central area of the Onkaparinga bowl there has been a marked shift from dairying to studs for the breeding of thoroughbred

horses. Mixed farming and market gardening continue with the production of potatoes, flower crops, hay and poultry. On the eastern side of the region fat lambs, beef and wood are produced as well as pigs. Timber, notably pine, is also grown for commercial purposes. Dolomite is extracted from local quarries for roadmaking.

#### 1971

**November 14:** Onkaparinga District Hospital extensions continued and a theatre complex and two geriatric wards were opened.

#### 1973

P.O. transferred to the local Four Square supermarket at Lenswood.

#### 1974

**February 11:** Onkaparinga Senior Citizens Club Inc. (Woodside, Charleston, Lenswood, Lobethal) founded to provide facilities, recreation, opportunity for service, local companionship, entertainment and care for members. A programme was planned each November by the committee. Since 1977 the group has met at the Lobethal Institute and Centennial Hall. The first presidents were Mrs. Meita Jungfer, Mr. Harold Schapel, Mrs. Linda Boerth (treasurer for the last ten years). Regularly attending the Annual Southern Zone Senior Citizens Rally, the club also has gala days and a zone picnic.<sup>148</sup>

**July:** Mrs. Margaret Wilksch, an Education Department social worker, convened a meeting to provide facilities for pre-school children, ranging from the Oakbank-Balhannah area to Inverbrackie.

The Kindergarten Union built a new building at Moffat Street, Woodside.

#### 1975

The E.F.S. ambulance complex opened at Woodside with the Council's backing. The Council and the St. John's Ambulance Division had affiliated in 1954 in the operation of the local Ambulance Service. Today the Council operates a fleet of two modern ambulances supported by volunteers from the St. John's Ambulance Division.

S.A. Farmers Co-op Union factory at Woodside closed, owing to a process of rationalisation.

**February:** The Oakbank Kindergarten opened. The old Oakbank School building used variously by the Girl Guides, Boy Scouts, as a woodwork and metalwork centre by the Oakbank Area School and as a 'Gem Cave', leased from the Education Department by the Kindergarten Union. Mrs. Janet Lynch was engaged as director and Mrs. Melanie Bennett employed as a teacher. Renovations had been largely funded by activities of the committee, parents and teachers; in 1976 the Government paid out all debt for pre-schools. In 1978, with declining numbers, the kindergarten returned to half day operation.

Facilities used and extended by the Oakbank-Balhannah Mothers and Babies Health Organisation, whose policy emphasises the desire to be as open to the community as possible and part of a supportive network for parents with young children.

Woodside Army Camp played a role in housing evacuees from Darwin, following the devastation caused by Cyclone Tracy.

#### 1976

4.3 square kilometres annexed from the East Torrens District Council and added to the Forest Range Ward.

Upsurge in building activities in Verdun, for instance, where a ready-mix concrete plant was built, and also a veterinary hospital.

First woman elected to the Onkaparinga District Council.

#### 1977

New Council Chambers; these were formally housed in the old Woodside electricity generating building car depot and workshop, where, as a temporary measure, a portion was partitioned off for offices and one Council chamber. The architect was Mr. John S. Chappel. A loan of \$150,000 was sought, to meet the major portion of the cost, the balance coming from reserve funds and revenue. There was a demand for a poll of ratepayers and the borrowing was revised to an amount under \$200,000.<sup>149</sup>

#### 1979

The Council accepted from a local Aged Homes Committee four units at Lobethal which had been built with the assistance of a Federal Government subsidy. A further four subsidised units were built and later 16 units at Woodside were erected under a resident-funded scheme. A joint venture with the State Government, under the Jubilee Homes project, will complete the Lobethal development of 14 units.

#### 1983

The O.D.C. adopted a new 13 year programme of major roadworks.

Opening of the John Brock Fry library at Lenswood Primary School by his grandson, Mr. Ken Filsell. The school again participated in the community 'Apple Pickers' Picnic' and the Valley Apple Festival, with a financial gain to the school of \$1,700. Mothers peeled and cooked the apples and made 500 apple pies for sale, while Council members helped by cooking apple pancakes for sale on the stall.

December 4: Final service at St. John's Church, Woodside.

## APPENDIX D

Land Sales in the Urban Areas of the Onkaparinga District Council

Annette Green

Table 5 Sale of land in Grunthal (part Section 1922, Hundred of Onkaparinga) 1842-1861  
(Note: no subdivision plan submitted)

12 March 1842	Section 1922 (80 acres) granted to Karl Ferdinand Boehrike of Mount Barker.
15 February 1845	Karl Ferdinand Boehrike of Mount Barker, farmer, sold Part Section 1922 (9 acres) to Ferdinand Welke of Mount Barker for £14.
1 September 1852	Ferdinand Welke of the village of Grunthal sold this block of land (along with the Inn and other buildings thereon) to John Stanley of Balhannah, gentleman, for £300.
24 August 1861	John Stanley of Balhannah, gentleman, sold this block of land (including the Stanley Bridge Hotel) to August Schunke for £700.
14 May 1852	Karl Ferdinand Boehrike of Grunthal, farmer, sold Part Section 1922 (13½ acres) to Carl Gottfried Prüss of Grunthal, farmer for £41.
14 May 1852	Karl Ferdinand Boehrike of Grunthal, farmer, sold Part Section 1922 (21 acres) to Heinrich Nagel of Grunthal, farmer for £42.
3 August 1853	Heinrich Nagel of Grunthal, farmer, sold this block of land to Ernst Nagel of Grunthal, farmer for £80.
11 February 1858	Ernst Nagel of Grunthal, farmer sold a portion of this block of land (7½ acres) to August Ludwig Friedrich Schlick of Cox Creek, sawyer for £70. On the same day he also sold another part of this block to Alfred Easter of Cox Creek, sawyer, for £70.
12 May 1859	Alfred Easter of Cox Creek, sawyer, sold his part of this block to Henry Rudoff Wigley esq. of Hahndorf for £27-5-0.
9 February 1860	August Ludwig Friedrich Schlick of Grunthal, sawyer, sold his part of this block to Henry Rudoff Wigley esq. of Hahndorf for £20.
7 January 1853	Karl Ferdinand Boehrike of Grunthal, farmer, sold Part Section 1922 (13½ acres) to Christian Freshe of Grunthal, farmer for £4.  At the same time Freshe sold this block of land to Henry Betteridge of Hindmarsh, carpenter, for £80, and Betteridge then sold it to John Goodall of Hindmarsh, grocer for £100.

Table 5 continued

27 July 1853	John Goodall of Hindmarsh, grocer, sold this block of land to Johann Heinrich Friedrich Wilhelm Nagel of Mount Barker, farmer, for £140.
24 December 1853	J.H.F.W. Nagel of Mount Barker, farmer, sold this block of land to Franz Heinrich Meisner of Clairville, Yeoman for £175.
12 January 1853	Karl Ferdinand Boehrike of Mount Barker, farmer, sold Part Section 1922 (10 acres) to Furgun Theodor Lehmkuhl of Mount Barker, gentleman for £35.
21 March 1853	Furgun Theodor Lehmkuhl of Mount Barker, gentleman, sold this block of land to Johann Christop Maetze of Mount Barker, gardener, for £100.
20 January 1854	Johann Christoph Maetze of Mount Barker, gardener, sold this block of land to Johann Ferdinand Weidemann of Adelaide, carpenter, for £200.
9 December 1857	Johann Ferdinand Weidemann of Adelaide, carpenter, sold this block of land to Christian Herreld of Grunthal, farmer for £225.
13 June 1861	<p>Land forfeited by default of mortgage repayments and sold to John Williams of Grunthal for £250.</p> <p>Note: The value of this block of land did not continue to escalate during the next two decades. During 1870 each of the three owners described themselves as storekeepers of Grunthal, the property being sold in 1870 for £125, in 1876 for £180 and in 1877 for £200.</p>
2 September 1853	Karl Ferdinand Boehrike of Mount Barker, farmer, sold Part Section 1922 (13½ acres) to Edward Hempel of First Creek, near Adelaide, farmer for £40.
3 March 1854	<p>Edward Hempel of First Creek, near Adelaide, farmer, sold this block of land to Heinrich Korber of Shea Oak Log, shoemaker, for £67.</p> <p>In 1864 Korber (who now described himself as a shoemaker of Grunthal) sold 3 acres and 6 perches of this land to his son for £32.</p>

13 October 1884	42	£0-5-0	Johann Joachim Clasohm.

**Table 11** Sale of land in Oakbank (part Sections 4018 and 4020, Hundred of Onkaparinga) by the Johnston family

Date	Allotment	Price	Purchaser
30 January 1840	-	?	Section 4018 granted to Andrew Galbraith of Glasgow, Scotland, esq.
30 January 1840	-	?	Section 4020 granted to John Thomson of Glasgow, Scotland.
8 December 1843	-	£200	Section 4019 and 4020 sold to Thomas Hill of Glasgow, Scotland, esq.
25 November 1854		£250	Section 4018 sold to William and James Johnston of Balhannah, brewers.
29 August 1855	10	£9	W. Whitfield of Balhannah, store-keeper.
1 October 1855	-	(Lease)	5 year lease of part Section 4018 (excluding that part laid out as the township of Oakbank), and part Section 4033 to Andrew Galbraith Johnston. (Lease back dated to 1 November, 1854). Annual rent of £100.
20 December 1855	11	£8	John Smith of Oakbank, yeoman.
8 May 1856	1, 2 & 15	£23	Matthew Leak of Oakbank, yeoman.
19 June 1856	4 & 14	£15	John Schofield of Oakbank, carpenter
21 December 1857	9	£13	Charles Smith of Oakbank, labourer
22 February 1858	-	£600	Sections 4019 & 4020 sold to James Johnston of Balhannah, brewer.
14 September 1858	12 & 19	£14	Robert Gibbons of Oakbank, labourer.
8 October 1862	24	£10	Thomas O'Bryan of Oakbank, labourer
8 October 1862	7 & 8	£36	Charles Henry Gray of Oakbank, brewer.
19 May 1863	17	£10	Thomas O'Brien of Oakbank, labourer.
20 October 1863	16	?	Matthew Leak of Oakbank, farmer.

A subdivision plan including that portion of Oakbank laid out on part Section 4020, was surveyed in August, 1870. The first allotment in this part of Oakbank appears to have been sold shortly after this date to George Attenborough of Oakbank, butcher (C.T. 149/81). Additional allotments in both Section 4018 and 4020 have gradually been sold by the Johnston family since this time.

Table 12 Lease and sale of working men's blocks

## APPENDIX E

A S.A. 150th Jubilee Proposal for the Management  
of the Heritage of the Onkaparinga District Council

Brian Harper, Deborah Jordan and Peter Perkins

Although this study has been concerned primarily with the heritage of artefacts and the precincts within which they are located, these are the most visual and therefore obvious residuals of the one hundred and forty five years of settlement within the Onkaparinga Bowl district. The townships and villages, from the larger Lobethal to the smaller Forest Range, are the more dynamic testimony to the evolution of the community within the district - present, past and future - and to the degree of the individual and collective civic pride expressed by the local people themselves.

For all but perhaps the very smallest hamlets the dynamics of the present and future mean growth and change, and, in the urgency of accommodating these two processes, irreversible decisions, through demolition or unsympathetic renovations, and through expedient but ill-considered choices of sites and building styles, may not only lose items of heritage value to future generations, but also diminish the more general quality of the townscape environment.

From the observation of the researchers involved in this study - architects, historians, geographers and planners - the following recommendations are proposed as a catalyst to the local people and their elected council to formulate their own management plan for the preservation and enhancement of the valuable heritage that exists within the Onkaparinga Bowl.

Objectives

To conserve the major characteristics of the district pertinent to the overall landscape - rural character, indigenous vegetation, scenic amenity.

To conserve all the elements of townscape quality within each settlement - heritage items, spatial arrangement, and street-scape treatment.

To ensure that all future development both rural and urban is complementary to the scale, character and visual quality of the district landscape and individual townscapes.

Action

Generation of civic awareness to create a greater public respect for the quality of their environment, both urban and rural.

Formulate guidelines for such aspects of the environment as:

- . Restoration of historic buildings
- . Sympathetic building design for new buildings (residential and commercial)
- . Walling and roofing materials used in new structures or for restoring old ones

- . Landscape design ideas and plant species schedules for street and domestic use
- . Advertising, street signage, and street furniture.

Seek cooperation from public instrumentalities (e.g. Highways Department) in the enhancement of areas under their control.

Negotiate with private landowners for building improvements and tree planting improvements.

Council initiation of precinct improvements through appropriate open space and streetscape treatments to landscaping, signage and street furniture.

Council assistance or encouragement in the rehabilitation or adaptation of buildings with heritage value, particularly for those likely to be demolished.

Council review of its requirements for all development applications to ensure that each is consistent and compatible with the precinct in which it is to be located in respect to:

- . Building design, e.g. compatibility in relation to form, scale and materials
- . Site layout and orientation
- . Wall materials and colour treatments
- . Roof design and materials
- . Landscaping (car parking and open space where applicable)
- . Signage and advertising (where applicable)

Council promotion with the retail traders to upgrade the building presentation and environment of the commercial areas.

Council programme to enhance the main road entrances to the townships.

Council programme to improve main pedestrian areas in townships (quality of pavement, plantings, street furniture of seats, bins etc.)

Council promotion with property owners to screen structures or activities which detract from the visual quality of the townscape or streetscape.

### Principles to Guide Development

#### **Land subdivision**

- . Should not reduce the character and scenic nature of the area
- . Conserve indigenous vegetation
- . Does not interrupt important rural or townscape views or skylines
- . Layout is compatible with the nature of the area in terms of both the topography and design of the existing and adjacent built-up area

#### **New developments**

- . Sited to ensure that existing or desired panoramic and corridor views essential to the townscape are maintained
- . Sited and scaled to ensure that it is not a dominant and distracting visual element in the townscape or landscape (except where this is the agreed intent consistent with

- the need to enhance the civic or other prime focus precinct)
- . Required to conform with the guidelines required for the precinct in which it is located (style, materials colours etc.)
- . Infill of existing sites within the town structure should be encouraged rather than the use of new sites, or locations requiring demolition of structures with some historic value.

### Action Projects

**Preservation of historic landscapes.** The area of the Onkaparinga Bowl contains some of the State's most beautiful landscapes (see Figure 1). Although much of the original vegetation has long since disappeared there still remain several stands of river red gum along the valley's creeks and significant patches of the once extensive stringybark forest on its western perimeter.

We strongly recommend that a landscape survey be undertaken to identify and list these important historical and visual features (e.g. location of original landscapes and a study of the creeks).

**Open spaces.** Although there are large areas of beautiful countryside in the valley, these are generally privately owned and inaccessible to the public. In conjunction with the above-mentioned survey, an action plan should be prepared defining areas of land which must be retained as national parks, or as locally important historic parks. This project would include conservation management proposals and a plan for tourist and bushwalker access and the need to accommodate 'weekend farmers' or people leading an 'alternative lifestyle'.

**Aboriginal sites.** The Council should co-operate with the S.A. Heritage Conservation Branch Aboriginal heritage unit in identifying and protecting any such locations.

**Pioneer Museum.** The Council should consider either setting up itself or supporting a privately run pioneer museum. This should include an archive and historical library with limited access to the public.

The following are suggestions for improvements in the three townships along the main corridor and tourist route of the Onkaparinga Valley Road:

#### **Balhannah**

Bridge entrance from Oakbank needs further planting of trees to frame the bridge as an entrance 'gateway' to the township. The balustrading of the bridge, soon needing repairs or replacement, should be replaced with a visually more substantial design. The major historic precinct of heritage value buildings requires landscaping both to enhance the area and to provide further visual attention to the area.

**Figure 57** 'The Onkaparinga Bowl' (the upper Onkaparinga Valley) as seen in the approach to Balhannah from Littlehampton on Junction Road. This area inspired some of Sir Hans Heysen's greatest paintings.

The modern houses on the northern side of Junction Street have little architectural merit and are not compatible with the heritage nature of the environs. These might be screened with street and garden plantings as a co-operative effort by Council and the residents.

#### **Oakbank**

The entrance from Balhannah is very abrupt and needs a bank of trees and shrubs for 30-50 metres on either side of the road under the existing gums. This will emphasise the lineal entry to the township and help to avert attention from the school buildings.

The Pike Brewery-Weavers building has little impact on the main street. The tree near the corner shop should be removed to open the view. The corrugated-iron shed should be reconstructed with materials sympathetic to those of the brewery to create some unity.

The corner opposite the Weavers, on the northern side of Main Street, rather than being redeveloped with a replacement structure, should be used to create an open space and to open a vista to the Johnston Brewery beyond. The open space, so created, can be developed as a town square and also gives an opportunity to enhance the environment for the entrance to the racecourse (Figure 60).

#### **Woodside**

Both the southern and northern approaches along the main road require more intensive tree and shrub planting - the entrance from Oakbank is quite well-defined, but needs under-planting, the northern approach needs tree and shrub planting along the roadside verges for a distance of 30-50 metres.

There is the potential to create the look of a 'town square' in the civic area of the District Council Offices and the institute building by more intensive landscaping and the introduction of columnar-shaped trees such as cypress to complement the buildings (Figure 61).

The Lenswood Road-main road junction with the old court house and Woodside Hotel need detailed planning in conjunction with the abutting civic area (see artist's impression).

#### **E.T.S.A. Power Lines**

'The most important improvement to all of the towns' visual amenity would be the undergrounding of the main electricity supply.

— **Figure 58** Balhannah. The attractive southern exit to Verdun is spoilt by stobie poles and crude advertising signs.

**Figure 59** Balhannah. Similarly, the town's northern exit to Oakbank is spoilt by the overhead power lines.

**Figure 60** Oakbank. The creation of a small square opposite the Weavers would enhance the townscape.

Figure 61 Woodside. A proposed civic square.
