Period: 1880-1890

Date: 1880

Condition: Well Kept

Architect:

Builder:

STATUS State Heritage List:

National Estate :

National Trust :

HERITAGE SIGNIFICANCE

RECOMMENDATION: Local

Description:

Random rubble sandstone with recently pointed front elevation.
Rectangular in plan. Pointed arched windows along side elevations..
Corrugated galvanized iron gable ended roof.

The town's first church service was conducted by a Free Presbyterian in May, 1877. In 1879, a move was made to erect a church, and Lachlan McInnes of "Glen Innes" presented a block of land. The foundation stone was laid in April, 1880; the sermon emphasized the austerity of the Free Presbyterians. Union of the Free and United Presbyterians came in 1890. The church is 'the main survival of the little old town' (P. Mason and W. Richards).

Description: Homestead

Subject: 4.01

Period: 1860-1880

Date: 1868

Condition: Well Kept

Architect: William T. Gore

Builder: Henry Smith and Thomas Agar

STATUS State Heritage List:

National Estate :

National Trust :

HERITAGE SIGNIFICANCE

RECOMMENDATION: State

Description:

Painted random coursed limestone with dressed quoins. Slate hipped roof. Two storey verandah on front elevation, has thick ground floor columns thin first floor columns with a simple timber balustrade to the first floor balcony and a rendered wall around the ground floor verandah. This verandah was a later addition, post 1924. Double hung sash windows. Front door has a semicircular fanlight. The "Cairnbank" homestead is of Georgian proportions and has a symmetrical front elevation. Internally the homestead has lath and plaster ceilings and some lath and plaster walls with cedar joinery. At the rear of the house are two single storey wings, enclosing a courtyard. They are built of random rubble limestone and corrugated galvanized iron hipped roofs.

The homestead was built in 1868 by Smith and Agar to a design by Gore, hence the resemblance to "Crower". The comparative simplicity of "Cairnbank" may reflect the religiosity of the Hensleys for whom it was built. The stone was local, all other materials imported from England.

Description:

Random rubble stonework with corrugated galvanized iron gable ended roof. 'T' shaped shearing shed. Smaller stone addition on southern elevation. Timber lintels over openings. Loft door. Thin door on east elevation, possibly connecting the shearing stands with the 'machine room'. the gable end on the east elevation is asymmetrical.

The run came into the hands of John Hensley in 1852, previous owners being Jacky White and Alexander Stewart. Hensley conquered the wild dogs and scab and prospered. He went to Geelong in 1865 to educate his children, leaving his brother Charles to manage. The woolshed is said to have shorn 60,000 sheep at its peak.

HERITAGE SIGNIFICANCE

RECOMMENDATION: State

Description:

Painted random coursed stonework with new corrugated galvanized iron hipped roof and raked verandah. House was originally a 3 or 4 roomed settlers' cottage and in 1913 the roof was raised and additions made. The house might have been designed to be two storey, judging by the thickness of walls.

Homestead would seem to have been begun by the McInnes Bros., although owners of the run before 1859 were William MacIntosh and Duncan McRae. The McInnes Bros. ran it in tandem with "Crower". The homestead section was bought by Andrew Robson of "Glen Roy" in 1876, when 100,000 acres had been resumed. He and his son William rebuilt the station to 40,000 acres.

National Trust :

HERITAGE SIGNIFICANCE

RECOMMENDATION: State

Description:

Two storey painted random coursed limestone with pointing and dressed quoins. Slate hipped roof. Corrugated galvanized iron concave verandah (single storey). Interior of building has been extensively altered in the last ten years. Single storey wing at rear of two storey block has been greatly changed to become more 'habitable' and linked to main house. Originally used as a kitchen, boiler room and maids' bedrooms, now used for storage, offices and recreation rooms. The ground floor of main house has not been altered except for interior decoration and the combining of the maids' room and pantry into a small sitting room. On the first floor structural changes made to bathroom (above sitting room) and installation of new ceilings below original lath and plaster ceilings.

Built for the McInnes Bros., at a time when the Government encouraged improvements on stations, the homestead on its opening was described as a 'magnificently constructed nine roomed double storey, slate roofed stone homestead, four bedrooms with dressing room adjacent main bedroom, pantry, office, detached laundry and three store rooms.'

Description:

Painted random rubble limestone with corrugated galvanized iron gable ended roof. 'T' shaped shed with semicircular arched door in tail of 'T'. Wall at rear section supported by railway track to stop it from falling down. Several additions and changes.

After an obscure early ownership, the "Crower" run came into the hands of John, William and Malcolm McInnes in 1859. By 1865 they had built it to 186 square miles. The woolshed, like the homestead, was constructed when a clause in pastoral leases encouraged fine buildings. In 1888, when much of "Crower" had been resumed, the remainder was bought by the Feuerheerdts Bros., of whom Emil developed a celebrated Romney Marsh stud, the second registered in Australia. The Feuerheerdtts introduced shearing machinery to the district in 1905. The woolshed shored over 40,000 sheep in its heyday.

Description:

Painted random coursed limestone with dressed quoins and surrounds. Corrugated galvanized iron hipped roof and raked verandah. Small bay windows on front elevation. Double hung sash windows. Built in side verandah on north elevation. Internally pressed metal and lath and plaster ceilings. Originally the house was four rooms, but additions built to encompass original structure.

Homestead begun in late 1870's or in 1880's when the property established by Butler who bought land from "Mount Bruce". The additions to the original four rooms were made in 1909 or thereafter by the Cowans. House originally approached through an avenue of claret ashes to a circular drive.

Description:

Random rubble limestone with corrugated galvanized iron gable ended roof. Corrugated galvanized iron porch. Casement windows.

A fine example of co-operation following discord, the school was built in 1901 by John Hensley Jnr., of "Cairnbank", after disagreements over an earlier school at Downer (former name of Avenue Range). Built on Education Dept. land, but owned by Hensley, who rented the building to the Dept. On his departure from the district in about 1915, he transferred ownership of the building to the trustees of the Lucindale Methodist Church; the Education Dept. continued to own the land.

Description:

Abandoned before "Morambro" built its outstations nearby, and therefore of a very early date. Perhaps given up because it is so often marooned by water.

Description:

Painted random rubble stonework with painted corrugated galvanized iron hipped and gable ended roof. Built in several sections at various unknown dates. Earliest wall in the house still in existence. Two original rooms remain, used as bedrooms. Double hung sash windows.

The station was founded by Stephen Jeffrey before 1851. When he married in 1855 the homestead was 3 miles north of the present site. When new regulations encouraged improvements, building began on the present site. Jeffrey's diary for 1865 shows that these improvements were proposed to include a stone house, a stone store, bedroom, cellar and dairy, a stone schoolroom and coach house, a stone kitchen, pantry and bedrooms, a stone stable, and a stone wall around the garden. By 1869 "Callendale" covered 97 square miles, and Jeffrey also owned "Shea Oak Range" and "Lake Eliza" around this time. In 1873, after business reversals, "Callendale" was sold to William McPherson, then to Robert and Solomon Foster in 1880. The Legoe family made large alterations to the homestead this century, incorporating Jeffrey's buildings into the structure.

Description:

Approximate Area of Conservation Park - 2,351 hectares.

Date of Establishment - 1964.

This park occupies a low lying area between the Woolumbool and Stewart Ranges and preserves a remnant of the once extensive wetlands of the South East. This area consists of a series of 'low limestone hills, sand dune remnants, flat plains, shallow depressions and swamps, each with a characteristic vegetation.' (A.C. Robinson & G.M. Rowberry). The areas of limestone have Dry Land Tea-tree, Christmas Bursh (*Busaria spinosa*), Native Hop (*Dodonaea viscosa*) and Drooping Sheoak. The higher areas of the park consist of an open woodland of Pink Gum and South Australian Blue Gum. The wetland areas of the park were flooded by water flowing from the catchment areas of the Mosquito and Yelloch Creeks, via Bool Lagoon, which was increased by the construction in 1909 of the Bool Lagoon outlet drain. This situation continued until 1967 when the Drain M was constructed, which then diverted water away from the Big Heath area.

Description:

Total Approximate Area of Conservation Park - 82 hectares.

Date of Establishment - 1973.

The construction of the Reedy Creek to Wilmot Drain has reduced the amount of wetlands along the course of the Reedy Creek. However, there are areas of remaining swampland scattered through the Reedy Creek Conservation Park. Along the bed of the Reedy Creek there exists remnants of an open forest of River Red Gums (*Eucalyptus camaldulensis*). Extensive areas of this park were burnt out during the bushfires of Ash Wednesday, 1983.
